DEDICATION

TO MY PARENT “””

TO MY FAMILY & MY FRIENDS

ACKNOWLEDGEMENTS

I would like to thank Dr. Yassin Mohammed Hamdan, my advisor, for his guidance and support throughout the course of the thesis.

In particular I would like to thank Eng. Mohammed Alamin , Eng Hozifa Mohammed. and Mr.Eid for providing valuable suggestions and resources, at times of need, that played a vital part in my case study. I would also like to extend my gratitude to my parents , my family and friends for their motivation and moral support in successful completion of this work.

ABSTRACT

Lean Six Sigma method is recognized widely depend, basically on increasing the benefits without increase in cost and has been implemented predominately in manufacturing industry. This research draws attention to the adoption of Lean Six Sigma in the bullet factory standard (7.62×39)mm, in al shagara industrial complex with a case study. The combination of Lean tools and Six Sigma methodology is used on projects to improve the process by eliminating the variations and creating workflow in a process. Some important tools are used like Pareto chart , failure modes and effect analysis ,fish bone diagram , fault tree analysis and value stream mapping ,according to voice of process and voice of customer, A new modifications in Trimming stage was proposed and practically tested and successfully implemented in the stage . The first modification is adding cover to separate between chips and products the result indicate that the sorting time was reduced from 50min to 15 min. Also the other modification is adding bearing between knife holder and rod , this reduce the defect by 2.5%.

تجريد

يعتبر نظام تقليل الهدر نظام معترف به على نحو واسع ، إذ انه يعتمد بشكل لُسسي على تحقيق زيادة في العوائد من غير زيادة التكلفة ، و تم تطبيقه على القطاع الصناعي بشكل سائد . و تم استخدام أدوات النظام بالعمليات بورشة إنتاج المقنّف للعار (39×7.62) ملم بمجمع الشجرة الصناعي. ومجموعة الأدوات المرنة لنظام تقليل الهدر هي منهجية تستخدم في المشاريع لتحسين العمليات بإزالة العوائق التي تسبب الانحرافات و خلق انسياب جيد للعمليات ومن أهم الأدوات التي تم استخدامها في هذه الدراسة هي مخطط باريتو ، و تحليل تأثيرات نمط الفشل ، مخطط عظم السمكة ، تحليل شجرة الأعطال وجدول تحليل القيمة ، و استنادا على صوت العميل و صوت العمليات و قد تم اقتراح و تنفيذ

تعديلين على مرحلة القطع ، و التعديل الأول هو إضافة حاجز في ماكينة القطع بحيث يفصل الرايش عن المنتج ومن نتائج هذه التعديلات تقليل زمن فرز المنتج قبل مرحلة السلب من (50 إلى 15) دقيقة ، و التعديل الآخر هو إضافة حوامل بين حامل السكين و عمود حامل السكين قد أدى لتقليل التالف بنسبة 2.5 % .
