Table of Contents

I. Introduction

1.1 Introduction ...........................................2

1.2 Problem statement .....................................2

1.3 Objectives .............................................3

1.4 Research methodology ................................. 3

1.5 Expected result .......................................3
2. Literature Review

2.1 Background .................................................................5

2.2 Definition of Biodiesel.....................................................9

2.2.1 Biodiesel feedstock....................................................10

2.2.1.1 Main characteristics of vegetable oils ......................15

2.2.2 Biodiesel Production Processes.................................16

2.2.2.1 Blending.................................................................17

2.2.2.2 Micro-emulsification..............................................19

2.2.2.3 Cracking.................................................................20

2.2.2.4 Transesterification process...................................20

2.2.3 Variables effecting transesterification process ..............23

2.2.4 Biodiesel fuel quality...............................................26

2.2.5 Biodiesel fuel standards............................................28

2.3 Glass reactor with heating plate and magnetic Stirrer........29

2.4 Biodiesel ester and glycerin layer................................30

2.5 Biodiesel using NaOH catalysts....................................30

2.6 Biodiesel washing using distilled water........................31

2.7 Freshman academy & the green school Initiative.............31

2.8 Biodiesel advantages & disadvantages..........................32
3. **Modification and Evaluation of Reactor**

3.1 Introduction

3.2 Minimize the tank of water

3.3 Minimize the tank of oil

3.4 The installation of a thermal insulator

3.5 Shaft coupling and stirrers

3.6 Reactor Operating Procedure

4. **Experimental Procedure and Discussion of Results**

4.1 Production of biodiesel from soybean oil

4.1.1 Raw Materials for Biodiesel Production

4.1.1.1 Vegetable oils

4.1.1.2 Short chain alcohols

4.1.1.3 Catalyst material

4.2 Tools used in test

4.3 Operations during the experiment

4.3.1 Heating of Water

4.3.2 Heating of Oil

4.4.3 Titration

4.3.3.1 The process for titration
4.3.4 Mixing of Methanol and Catalyst------------------44
4.3.5 Draining of Glycerol------------------45
4.3.6 Washing of Fuel------------------46
4.3.7 Making of soap------------------47
4.4 Transesterification (biodiesel reaction for oils) ---------47
4.5 Reactor performance------------------48
4.6 Results and Discussion------------------48
4.6.1 Density------------------48
4.6.2 Flash Point------------------49
4.6.3 Kinematic Viscosity------------------49
4.6.4 Heating Value------------------49
4.6.5 Pour Point------------------50

Conclusion and Recommendations------------------52
References------------------54
Appendices------------------57
