Design of Security System for Remotely Installing Solar Panels

تصميم نظام الأمان لتنبيت الألواح الشمسية عن بعد

A thesis submitted in partial fulfillment of the requirements of the degree of
M.Sc. in computer and networks engineering

By:
Randa Siddig Ramadan

Supervisor:

Dr. Hisham Ahmed.

January, 2018

DEDICATION

Specially dedicated to my beloved father, my mother and all of my friends

I couldn't have done this without you

Thank you for all your support along the way

ACKNOWLEDGEMENTS

I express my gratitude towards The Almighty God for His blessings upon me. First and foremost, I would like to convey my supervisor Dr. Hisham Ahmed for her valuable guidance and helpful advices throughout the process of project building.

Second, I would like to thanks to people who has supported me and gave encouragement, guidance and advices in order to help me to complete the project successfully.

Lastly, I would like to give my gratitude to my parent, my sibling and my friends for their invaluable help. I wish them all good luck in their future plans.

Randa Ramadan.

مستخلص البحث

تم تصميم أنظمة إمداد المياه معتمدة على الطاقة الشمسية للحفاظ على إمداد المياه المستمرة للسكان، الحيوانات والري في المناطق النائية التي لا يوجد بها كهرباء. أصبحت سرقة ألواح الطاقة الشمسية مشكلة مستمرة في جميع أنحاء العالم، وتحديات أكبر تأتي من قبل المجرمين . في هذه الأطروحة، يعرض تصميم نظام الأمان عن بعد لحماية ألواح الطاقة الشمسية وضمان استمرارية عملية وحدات الضخ الشمسية. نظام تصميم الأمان عن بعد للألواح الطاقة الشمسية ينتج أصوات إنذار عالية وإرسال رسالة قصيرة (SMS) وصورة (MMS) إلى مدير المحطة عند اقتراب الدخيل أو اللصوص من الواح الطاقة الشمسية. يستخدم هذا النظام أجهزة الاستشعار بالموجات فوق الصوتية، متحكم، مودم GSM يدعم أوامر (TA) لإرسال أمر البيانات عبر (SMS)، شاشة الكريستال السائل (LCD) التي تعرض رسائل التنبيه والمسافه ، الجرس والكاميرا تعتبر مكونات رئيسية. تم برمجة الكود باستخدام لغة (BASIC) وتنفيذ تصميم في الأجهزة المستخدمة باستخدام برنامج (Proteus 7.7 ISIS) . وإستنادا الي النتائج يمكن استنتاج أن النظام المقترن هو مستقر وموثوق به وعملي جدا . ولديه مزايا مثل سهل التشغيل وإنخفاض استهلاك الطاقة .

ABSTRACT

Solar pumping systems are specially designed to maintain constant water supplies for the population, animals and irrigation in remote areas where there's no electricity. Solar panels theft has been a persisting problem around the world and greater challenges come from criminals. In this thesis, presents design of security system remotely installed solar panels to protect the solar panels and to ensure the continuity of the solar pumping units operation. The design of security system remotely installed solar panels produce high alarm sounds, send SMS and picture (MMS) message to station administrator when solar panels approached or touched by an intruder. This system uses ultrasonic sensor, microcontroller, GSM modem supports AT command set to send data command via SMS, Liquid Crystal Display (LCD) displays the distance and message, buzzer and camera as main components. The software was programmed use BASIC language. The designed was implemented in the hardware used Proteus 7.7 ISIS. Basing on results, one can conclude that the proposed method is stable, reliable and very practical. It has the advantages such as easy to operate, very efficient and low power consumption.
