صدق الله العظيم

( سورة الرحمن )

*Dedication*

*To*

*my father*

*To*

*my mother*

*my uncle and ante*

*brothers and sisters*

## **ACKNOWLEDGEMENT**

I would like to thank all my parents, my brother, my sisters and my friends. Special thanks are due to my Supervisor, Dr.ALAAELDEEN AWOUDA, A lot of thanks for dal groups specially sayga flour mills for there help and synergy and many thanks for Eng. Muaaz abbas .

## **ABSTRACT**

The Supervisory Control and Data Acquisition (SCADA) system monitors and controls many applications such as:

(Water distribution network including water reticulation, pump stations, Public utilities, including electrical power generation, oil and gas pipelines, and water and sewage treatment plants).

The main objective of this research to design SCADA system for remote monitoring of sayga water there are many problems in the traditional control system such as : stop of water supply , flooding of water from the main tank and the difficult location of the damaged part in the system all of this problems leads to stop the work for long periods and it causes huge losses .

the problems were solve by monitor and control the filling of tanks to prevent flooding and facilitate the location of damaged device in the system . providing the system with sound alarm to notify workers from that we sure the system will continue without any stop .

also we add Pumps to work when one of these pump stopped , and there are many sensors in any tanks to detect the limit of water also you can supervisor the woter by scada system

## الملخص

تستخدم أنظمه مراقبه التحكم ونظام اكتساب البيانات في العديد من التطبيقات على سبيل المثال (شبكة مضخات المياه متضمنه مد شبكات المياه ومحطات الضخ وفي المرافق العامة مثلا محطات توليد الكهرباء وحقول النفط والغاز ومحطات معالجة المياه والصرف الصحي) .

الهدف الرئيسي من هذا البحث هو تصميم انظمه مراقبه التحكم للمياه في مصانع سيقا حيث أن النظام التقليدي للتحكم يحتوى على عدة مشاكل منها انقطاع أو فيضان المياه من الخزان الرئيسي كما أنه عند حدوث عطل في اي جهاز يتطلب الامر ساعات طويله لمعرفة مكان الجهاز المعطوب واصلاحه وكل هذه المشاكل تؤدي الي توقف العمل لساعات طويله مما يكلف مبالغ ضخمة .

وقد تمت معالجه المشكله بالمراقبه والتحكم والتأكد من عدم فيضان المياه بوضع حساسات للايقاف التام للنظام عند امتلاء الخزان كما يوجد اذار صوتى للتنبيه عن وجود عطل وبذلك يتم التأكد من تواصل العمل من غير انقطاع .

وقد تم عمل مضخات احتياطيه للعمل في حاله توقف احد المضخات كما ان هذه المضخات تعمل بالتناوب كما انه توجد حساسات في كل حزان ليحدد مستوى المياه كما انه يمكن مراقبه سريان المياه عن طريق نظام الاسكادا .

## List of contents

<b>List of contents</b>		
	الاية	I
	Dedication	II
	Acknowledgement	III
	Abstract	IV
	الملخص	V
	List of contents	VI
	List figure	IX
	List of abbreviations	X
	List of table	XI
<b>Chapter one Introduction</b>		
	Introduction	1
1.1	Overview	1
1.2	Problem statement	1
1.3	Problem solution	1
1.4	Research Aims and objective	2
1.5	Methodology	2

1.7	Thesis outline	2
<b>Chapter two literature review</b>		
2.1	Overview	3
2.2	Programmable logic controllers	3
2.2.1	PLC internet Architecture	4
2.2.2	Operation principles	5
2.2.3	PLC programming	6
2.2.4	PLC advantage	7
2.3	SCADA system	8
2.3.1	SCADA system capacities	8
2.4	Siemens network automation step 7 control center	9
2.5	DSL Router	12
2.6	Pump	12
2.6.1	Passive displacement pumps	13
2.6.2	Type of displacement pumps	13
2.7	Valve	14
2.7.1	Type of valve	14
2.8	Sensor	14
2.8.1	Level sensor	15
2.8.2	Ultrasonic level sensor	16
2.9	Motor	17
2.9.1	Motor composed	17
<b>Chapter three System design</b>		
3.1	Overview	22
3.2	System Block diagram	22

3.3	Description of the system	23
3.4	Signal movement	23
3.5	Flow charts	27
<b>Chapter four Result and Discussion</b>		
4.1	Overview	28
4.2.1	Case 1 The First pump work	29
4.2.2	Case 2 The second pump work	29
4.2.3	Case 3 The tank was full and pumps stop	30
4.2.4	Case 4 Pump 2 was stop	31
4.2.5	Case 5 Pump 1.3 stop because of over Due	31
4.2.6	Case 6 The filter stop	32
4.2.7	Case 7 Pump 2 is work	32
4.2.8	Case 8 High high level indicate	33
4.2.9	Case 9 By pass Pumps work	33
4.2.10	Case 10 How the water supply to tank A	34
4.2.11	Case 11 The Pump stop and the valve showdown	34
4.2.12	Case 12 Pump A stop	35
4.2.13	Case 13 The distribution area doesn't work	35
<b>Chapter five conclusion and recommendation</b>		
5.1	Conclusion	37
5.2	Recommendation	38
	References	39
	Appendix	41

## List of figures

2.1	PLC internal architecture	4
2.2	PLC Scanning	5
