Sudan University of Science and Technology
College of Graduate Studies

Study of High K.V Technique in Chest X-ray Radiography

دراسة تقنية الفولتية العالية في التصوير الإشعاعي للصدر

A thesis submitted for partial fulfillments of the requirement of M.Sc degree in Diagnostic Radiologic Technology

:By
Raya Hassan Siddig
B.Sc honour in Diagnostic Radiologic Technology

:Supervisor
Dr. Doha Abdo Mohammed Abdo
PhD Diagnostic Radiology

December 2009
Contents

Dedication ......................................................................................... i
Acknowledgment ............................................................................. ii
Abstract [English] ............................................................................. iii
Abstract [Arabic] ............................................................................... v
List of Abbreviations ...................................................................... vi
List of Tables ................................................................................... vii
List of Figures .................................................................................. viii

Chapter One: Introduction
1. Introduction .................................................................................. 1
1.1 Objectives .................................................................................... 4
1.2 Materials ..................................................................................... 4
1.3 Methods ....................................................................................... 4
1.4 Data collection ............................................................................. 5
1.5 Sampling and Duration ............................................................... 5
1.6 Thesis outline ............................................................................... 5

Chapter Two: Background
2.1 Conventional radiography ....................................................... 6
2.1.1 Introduction ............................................................................. 6
2.1.2 Nature and properties of X-ray ............................................ 6
2.1.3 The X-ray system ................................................................. 6
2.1.3.1 The X-ray generator ....................................................... 7
2.1.3.2 The X-ray tube
2.1.3.3 Control panel
2.1.3.4 Beam modifier (filter, collimator, cone or compensatory)
2.1.4 X-ray beams
2.1.5 Exposure factors
2.1.5.1 K.Vp
2.1.5.2 MAS
2.1.5.3 Focal spot size
2.1.5.4 Filtration
2.1.5.5 Focus-film distance (FFD)
2.1.5.6 Collimation
2.1.5.7 Table-top attenuation
2.1.5.8 Grid
2.1.6 The Imaging Process
2.1.7 Recording the Image
2.1.7.1 Intensifying screen
2.1.7.2 X-ray film
2.1.7.3 X-ray cassettes ............................................................... 15
2.1.8 Radiographic Processing .................................................. 15
2.1.8.1 Development ............................................................... 16
2.1.8.2 Rinsing ........................................................................ 16
2.1.8.3 Fixing .......................................................................... 16
2.1.8.4 Washing ....................................................................... 16
2.1.8.5 Drying .......................................................................... 17
2.1.8.6 Optimum processing concepts ...................................... 17
2.1.9 High K.Vp Technique ....................................................... 18
2.1.9.1 Introduction ................................................................ 18
2.1.10 The quality of radiograph .............................................. 19
2.1.10.1 Image quality factors .................................................. 20
2.2.1 Basic anatomy of the chest .............................................. 22
2.2.1.1 Structure of the thoracic wall ..................................... 24
2.2.1.2 The thoracic cavity ...................................................... 25
2.2.1.3 Structures of the mediastinum.................................28
2.2.2 Chest physiology.........................................................30
2.2.3 Pathology.............................................................31
2.2.3.1 Lungs.................................................................31
2.2.3.2 The pleura..........................................................34
2.2.3.3 The mediastinum..................................................36
2.2.3.4 Disease of air ways................................................38
2.2.3.5 Heart disease.......................................................39
2.3.1 Chest radiography....................................................41
2.3.1.1 Indications for chest radiography............................41
2.3.1.2 Methods of radiological investigations......................42
2.3.1.3 Technical factors..................................................42
2.3.1.4 Positioning consideration........................................44
2.3.2 Basic and alternative radiographic positions.................46
2.3.2.1 Basic.................................................................46
2.3.2.2 Alternative.........................................................46
2.3.3 The Usage of high kVp Technique in Chest Radiography...........................................53
2.4 Previous studies..........................................................55
3.1 Population and duration of the research..........................57
3.2 The area and material of the research.............................57
Chapter Four: Data Analysis and Results

Data Analysis and Results ................................................................. 60

Chapter Five: Discussion, Conclusion and Recommendations

5.1 Discussion ................................................................................. 77
5.1.1 The anatomical appearance ................................................. 77
5.1.2 The image quality ............................................................... 79

Conclusion ...................................................................................... 80
5.2 Recommendations .................................................................... 81
5.3 Suggestions for future studies ................................................. 82

References ....................................................................................... 83

................................................................. APPENDICES
