### CHAPTER ONE (Introduction)

1.1 Motivation  
1.1.1 Inorganic solar cells  
1.1.2 Amorphous silicon cells  
1.1.3 Multi junction  
1.1.4 Organic solar cells  
1.2 Objective  
1.3 Outline of the thesis

### CHAPTER TWO (Solar cell theorem)

2.1 The PV cell  
2.2 The p-n junction  
2.3 Drift and diffusion current  
2.4 Solar cell efficiency  
2.4.1 Energy conversion efficiency  
2.4.2 Quantum efficiency  
2.5 Maximum power  
2.6 Fill factor  
2.7 The metal-semiconductor junction

### CHAPTER THREE (Organic solar cells)

3.1 Introduction  
3.2 Conjugated polymer  
3.3 Organic solar cell  
3.4 Blend cell  
3.5 Metal contact  
3.6 General requirements of the photoactive layer  
3.6.1 Electron Acceptor (PCBM)  
3.6.2 Electron Donor (MDMO-PPV)and(P3HT)  
3.6.3 Indium Tin Oxide ITO)  
3.6.4 PEDOT:PSS

### CHAPTER FOUR (Program Simulation -1D)

4.1 AMPS and Its Features  
4.2 Poisons equation  
4.2.1 The Delocalized (Band) state populations n and p  
4.3 The continuity equations  
4.3.1 Electron and hole current density  
4.3.2 Direct (Band to band) recombination  
4.3.3 Parameters for representing semiconductor properties  
4.3.4 Parameters for optical properties  
4.4 Procedure for running AMPS  
4.5 How to generate device characteristics
