List of Figures

Figure 4-1 scatter plot of the % dose received by the eye versus its distance from the upper border of anterior supraclave field with a trend line that show an inverse linear relationship 28

Figure 4-2 scatter plot of the % dose received by the eye versus its distance from the upper border of tangential field with a trend line that shows an inverse linear relationship. 28

Figure 4-3 scatter plot show the association of the % dose received by the eye in anterior supraclave irradiation verse the equivalent square field size, the trend line indicate direct proportionality of the % dose received and the field size. 29

Figure 4-4 scatter plot show the association of the % dose received by the eye in tangential fields irradiation verse the equivalent square field size, the trend line indicate direct proportionality of the % dose received and the field size 29

Figure 4-5 scatter plot of the % dose received by the thyroid versus its distance from the upper border of anterior supraclave field with a trend line that show an inverse linear relationship 30

Figure 4-6 scatter plot of the % dose received by the thyroid versus its distance from the upper border of tangential field with a trend line that shows an inverse linear relationship. 30

Figure 4-7 scatter plot show the association of the % dose received by the thyroid in anterior supraclave irradiation verse the equivalent square field size, the trend line indicate direct proportionality of the % dose received and the field size. 31

Figure 4-8 scatter plot show the association of the % dose received by the thyroid in tangential fields irradiation verse the equivalent square field size, the trend line indicate direct proportionality of the % dose received and the field size. 31
Figure 4-9 scatter plot of the % dose received by the shoulder versus its distance from the anterior supraclavicle field with a trend line that shows an inverse linear relationship.

Figure 4-10 scatter plot of the % dose received by the shoulder versus its distance from the upper border of tangential field with a trend line that shows an inverse linear relationship.

Figure 4-11 scatter plot show the association of the % dose received by the shoulder in anterior supraclavicle irradiation versus the equivalent square field size, the trend line indicate direct proportionality of the % dose received and the filed size.

Figure 4-12 scatter plot show the association of the % dose received by the shoulder in tangential fields irradiation versus the equivalent square field size, the trend line indicate direct proportionality of the % dose received and the filed size.
List of tables

Table 4-1 the mean and standard deviation of the dose percent received by the critical organs versus the distance for the upper border of the anterior supraclavicle field.

Table 4-2 the mean and standard deviation of the dose percent received by the critical organs versus the distance for the tangential field.
