

Dedication

This work is dedicate

To my parents

and

That gave me hope and lit my way companion
of my life and Sora (my wife)

and

To my dear brother and sisters

First I thank GOD who made all things possible. Sconded I am extremely grateful to my supervisor Dr.Ehmed Elhassn who encouraged me to write in this topic, my deep thank to my all teachers in Sudan university of science and technology also present thank to my colleagues at all Sudan university. Finally this acknowledge not complete without thanking my family whose support me.

Abstract

We analyze the Wilson loop for a pure Yang-Mills theory, using addecoupling solution in close agreement with lattice computations. At one-gluon exchange level it is seen that the potential cannot yield a linear rising contribution as expected for a confining theory. Next-to-leading order

correction gives rise to a quartic term for moment a in the gluon propagator that, in agreement with Gribov's view, yields a linear confining term. This correction is due to a two-loop or sunrise integral that we need to evaluate in the low-momenta limit. In the infrared regime, the physical consistency of the theory is determined by a natural cut-off, arising from the integration of the classical equations of the theory, fixing in this way the regularization scheme.

ملخص البحث

Abstract in Arabic

قمنا بتحليل حلقة ويلسون لنظرية يونج ميلز باستخدام الحل المقترن والذي يتوافق مع الحسابات الشبيكية. مستوى جسيم الغالون واحد المتبادل لا يظهر الجهد خطياً كما متوقع بالنسبة للنظرية المحددة. مما يقودنا الي التصحيح بظهور حركة جسيم الكوارك بزخم) وذلك خلال انتشار الغالون. وبالاتفاق مع وجه نظر جريوف، ينتج حد خطي متوقع، هذا التصحيح على حسب علاقيتين او ظهور المساحة الشمسية والتي نحتاجها لتقدير اقل حد للزخم. في منطقة الاشعة تحت الحمراء المكونات الفيزيائية للنظرية المحددة بالقطع الطبيعي الذي يظهر من تكامل المعادلات الكلاسيكية للنظرية مصطلحاً لطريقة مخطط التسوية.

Table content

Subject	Page No
Dedication	I
Acknowledgment	II

Abstract	III
Arabic abstract	IV
Content	V

Chapter one

Introduction

1.1. Introduction	1
1.2. Search Content	3
1.3. Research Problem:	3
1.4.Objectives:	3

Chapter Two

QuantumChromodynamics

2.1. The QCD Lagrangian	5
2.2. The QCD coupling and renormalization scheme	6
2.3 QCD in deep-inelastic scattering	11
2.4.QCD in heavy-quarkonium decay	13
2.5.Perturbative QCD in $e^+ e^-$ collisions	15
2.6.Scaling violations in fragmentation functions	21
2.7.Photon structure functions	22

2.8.QCD in diffractive events	23
-------------------------------	----

Chapter Three

3.1.One Gluon Exchange Potential from Dyson Schwinger Equations	25
3.2. Wilson loop from a Dyson equation	30
3.2.1 Potential between two static quarks	30
3.2.2.Dyson equation for the Wilson loop	30
3.3.Infrared Absorptions And Vibration	36
3.3.1. Infrared Absorptions	36
3.3.2. Normal Modes of Vibration	37
3.3. Vibration – Rotation Bands	42

Chapter Four

4.1 Yang-Mills Theory	45
4.2 static potential	46
4.3.Infrared Quantum Field Theory	28
4.4.Scalar Field Theory	49
4.4.1.Yang-Mills Theory for infrared	51
4.5. Comparison with Numerical	54

Data	
4.6. Two -Loop Correction	59
4.7. Renormalized Gluon Propagator	61
4.8. Wilson Loop And Potential	62
conclusion	66
References	68
