

Dedication

To

The knowledgeable local people and communities of AL-arshkol village everywhere.

To

All researchers who want to know how local people can develop their communities and natural vegetation

Mohammed

Acknowledgements

I would like to express my gratefulness to my supervisor Dr. Abdel Hafeez Ali Mohamed for his valuable advices and helpful supervision. Deep gratefulness to Mr. Faisal Mohammed and Mr. AL- Amain Zeen EL Abdeen and their families for their help during the field data collection.

My appreciation extends to all the staff of the College of Forestry and Range Science, Sudan University of Science and Technology for their great help.

I'm also indebted to the staff of Faculty of Science, Department of Botany and Faculty of Forestry, Khartoum University for their cooperation and collaboration during the data collection process. Finally I would like to thank my family and friends who shared with me the hard times through out this work.

Abstract

This dissertation deal with ecological taxonomy on study of the vegetation of AL-arshkol hills, about 40Km² wests EL-Dueim Town, White Nile state.

Taxonomic studies included freshly plant collection, perpetration, identification and classification of plants species in the study area, and incorporation of herbarium specimens in the herbaria as well as botanical description of the some important plants with hand drawing illustration and special reference uses.

85 species belonging to 31 families were identified. Scientific names of collected plants has have checked and updated and check list of all plants found in the area has been prepared. Almost 50% of the species were found to have grazing value, medicinal and indigenous uses.

Ecologically and according to the dominancy five associations were identified. Also found changes in vegetation cover communities compared to pervious studies were noticed.

The study resulted in identification of five plants associations with short description to their habitats. This study recommended that perception and awareness of local people and pastorals should be increased towards the conservation, protection, and management of the range plants in the study area, and more ecological studies should be carried out in the study.

دراسة بيئية وتصنيفية للغطاء النباتي بجبال العرشكول . ولاية النيل الأبيض

الخلاصة

هذه الدراسة تمثل دراسة بيئية وتصنيفية للغطاء النباتي بجبال العرشكول على بعد 40 كيلو متر غرب الدويم ولاية النيل الأبيض . الدراسات التصنيفية تشمل جمع النباتات الحية, تجهيزها , تعريفها تصنيفها , وترتيبها فى المعشبة بجانب الوصف المختصر لبعض النباتات المهمة مع استخداماتها والرسم باليد لتوضيحها.

فى هذة الدراسة تم توثيق وتعريف 85 نوع نباتي تنتمي إلى 31 عائلة نباتية. تمت مراجعة الاسماء العلمية لكل النباتات التى حصرت. 50% من النباتات التى وجدت لها قيمة رعوية واستخدامات محلية.

من خلال الملاحظات الحقلية والدراسات البيئية تم توزيع المجتمعات النباتية الى خمس مجموعات نباتية مع تعريف اشكالها من اشجار وشجيرات واعشاب ووصف بيئاتها المحلية.

ايضا وجدت تغيرات فى الغطاء النباتى فى المنطقة مقارنة مع الدراسات السابقة. توصى الدراسة بزيادة الوعى للمواطنين المحليين تجاة المحافظة والحماية لادارة نباتات المراعى بالمنطقة بجانب زيادة الدراسات البيئية بالتركيز على توزيعات الغطاء النباتى ومسا قط المياة بالمنطقة. كما توصى الدراسة بالمزيد من الدراسات لمعرفة كل النباتات الموجوده وتصنيفها وتحديث اسمائها ومعرفة النباتات المذقرضة و الغازية.
