Dedication

To my parents ...

To my teachers ...

To my brothers ...

To my sisters ...

To my friends ...

To my all relatives ...

Acknowledgment

All praises and glory be to Allah lord of the worlds, the most beneficent, and the most merciful. His blessing be upon his prophet Mohammad and all the prophets before him.

This work could not have come to light if not through the guidance of my supervisor Dr. Abd Elftah Bilal. I thank him greatly for his encouragement, time, criticism and advices.

We wish also to thanks Eng. Ahmad Zumrawi for his help in the software of the project. Moreover, special grateful thanks for Eng. Yousif Ishag for his help in hardware. I would like to show my deepest gratitude to our teachers, and department for their friendship, help and kindness through the years of study.

Abstract

This project indicates the steps of the design of handling system model used in control of warehouse, This automatic gripper moves in two axis (X, Y) to any programmed points. Beside, the project indicates the using of stepper motors to realize the purpose and how to control in stepper motors by using suitable control circuit.

This project discusses the method of interfacing between stepper motors and personal computer. Also it contains a program to manage a hardware of model written in high level language (DELPHI.7 PROGRAM) to realize a desired movement.

هذا المشروع يوضح خطوات تصميم نموذج نظام مناولة آلي يستخدم للتحكم في المخازن, هذا النظام يتحرك في محوري (X -Y) الى أى نقطة محددة فى المحورين تتم برمجتها. بالاضافة الي ذلك هذا البحث يوضح خطوات استعمال المحركات الخطوية لتدقيق الحركة وكيفية التحكم فيها باستخدام دائرة تحكم مناسبة. يناقش هذا البحث طرق الربط بين محركات الخطوة والحاسب الشخصي. ايضا يحتوي هذا البحث علي برنامج مكتوب بلغة ديلافي (Delphi ver.7) التي تعمل كوسيط بين المستخدم والحاسب لتدقيق الحركة المطلوبة.

TABLE OF CONTENTS

الآية	Page
DEDICATION	i
ACKNOWLEDGEMENT	ii
ABSTRACT	iii
الملخص	iv
TABLE OF CONTENTS	v
LIST OF TABLES	vi
LIST OF FIGURES	ix
	x

CHAPTER ONE: INTRODUCTION

1. 1 Control Systems	1
1.1.1 Open - loop control system	3
1.1.2 Closed - loop control system	4
1.1.3 Automatic control system	5
1.2 Type of Controllers	7
1.3 Control of Warehouses	7
1.4 Statement of Problem	8
1.5 Objectives	8
1.6 Thesis Layout	9

CHAPTER TWO: STEPPER MOTORS

2.1 Introduction	10
2.2 Usage and Limitations of Stepper Motors	11
2.3 Torque and Power	12
2.4 Step Angle and Shaft Speed	12
2.5 Types of Stepper Motors	13
2.5.1 The variable – reluctance stepping motor	13
2.5.2 The permanent magnet stepping motor	15
2.5.3 The hybrid stepping motor	15
2.6 Coils Energized Sequence	17
2.7 Stepper Operation	18
2.8 Modes of Operation	18

2.9 Load Effect	21
2.10 Advantages of Stepper Motor	23
2.11 Disadvantages of Stepper Motor	23

CHAPTER THREE: CONTROL OF STEPPER MOTOR VIA COMPUTER

3.1 The Driver	24
3.2 Interfacing to Personal Computer	24
3.3 Port Addresses	25
3.4 Parallel Printer Port	27
3.5 The DB – in the Parallel Port.	28
3.6 The Design of the Electronic Circuit	32
3.7 The Electronic Drive Circuit (ULN2004A)	32

CHAPTER FOUR: EXPERIMENTAL SETUP

4.1 Mechanical Design	36
4.2 Steps of Design	37
4.3 The Proposed Design	38
4.4 The Partial Setup	40
4.5 Circuit Operation	41
4.6 Delphi Program	41
4.7 The Flow Chart	43
4.8 Main Program	45
4.9 Parallel Port Monitor	53
4.10 The Results	53

CHAPTER FIVE: CONCLUSIONS AND RECOMMENDATIONS

5.1 Conclusions	55
5.2 Recommendations	56
References	57
Appendix A	58
Appendix B	59
Appendix C	60

Appendix D	61
Appendix E	62
Appendix F	63

LIST OF TABLES

Table No.	Title	Page
2.1	The energized for stepper	17
2.2	Summary of stepper motor parameter	17
3.1	The ULN series	24
3.2	Port addresses	26
3.3	LPT addresses in the BIOS data area	27
3.4	The pin in the parallel port	29
4.1	The shelf location in warehouse	54
4.2	The result for destination	54

LIST OF FIGURES

Figure No.	Title	Page
1.1	Process to be controlled	2
1.2	Open - loop control system	3
1.3	Closed – loop control system	4
1.4	Multivariable control system	5
1.5	A block diagram of control system	7
2.1	The stepper motor	11
2.2	Asingle stack four phase, (8/6) pole, variable reluctance stepping motor	14
2.3	Single, three phase 12/8 poly variable reluctance stepping motor	14
2.4	A three – stack, three phase variable –reluctance stepping motor	15
2.5	Cross section of hybrid stepping motor showing the axial permanent magnet and flux path	16
2.6	Position versus time for the single-step mode	20
2.7	Position versus time for the slew mode	20
2.8	Torque-speed curves for single-step and slew modes	20
2.9	Torque goes to zero as the rotor aligns with the field pole.	21
2.10	A PM 90 stepper motor	22
2.11	Illustration what would happen if the rotor where allowed to lag a full step behind the field poles.	22

3.1	The parallel port pins	31
3.2	Diagram of the operation sequences	32
3.3	The integrated circuit	33
3.4	Detail connection between parallel port, IC and stepper motor	34
3.5	The chips connection to the parallel port	35
4.1	The proposed mechanical system	39
4.2	The practical setup	40
4.3	The inside of practical setup	41
4.4	Flow chart steps of executing the program	44
4.5	Parallel port monitor	53
