Dedication

For my parents for their kind

To my wife and my children (Mohamed Elmontaser, Sohaib & Khabab) for their patience

To my brother, sisters, friends and colleagues

For their encouragement and support

And every one helped me.
Acknowledgement

Thanks must first be given to Allah, for giving me health, strength, and power to achieve this work and to make my dream real.

I thank my parents for asking Allah to keep care and success.

I’m very glad to thank my supervisor Dr. Alnazier for his endless guidance, my thanks to my colleagues for their encouragement.

My thanks extended to my brother Dr. Alneil Abdalla for his continuous advices and supporting and all the staff in laboratory Administration in Khartoum State for their helpful, collaboration and endless help during my research especially my brother Nasher Albushra.

## CHAPTER ONE

**Introduction** 1

1.1 Clinical chemistry 1

1.1.1 Type of clinical chemistry instrumentation 2

1.2 Importance of calibration 3

1.3 Type of error 4

1.4 Problem definition 4

1.5 Thesis objective 5

1.6 Area study 5

1.7 Overview of the study 5

## CHAPTER TWO

**Theoretical Background** 7

2.1. Clinical chemistry 7

2.1.1 The large array of laboratories 8

2.1.2 Example of the tests in chemical pathology 8

2.2 Type of Clinical Chemistry Instrumentation 8

2.2.1 Colorimeter 9

2.2.2 Spectrophotometer 9
2.2.3 Flame photometer
2.2.4 Fluorometry
2.2.5 Enzyme-Linked Immune Sorbent Assay (ELISA)
  2.2.5.1 Washer Systems
  2.2.5.2 ELISA Plate Readers
2.2.6 Auto analyzers
  2.2.6.1 The Auto Analyzer is consists of
    2.2.6.1.1 Sampler
    2.2.6.1.2 Proportioning pump
    2.2.6.1.3 Dialyzer
    2.2.6.1.4 Heating bath systems
    2.2.6.1.5 Colorimeter
    2.2.6.1.6 Recorder
2.3 Spectrophotometers
  2.3.1 Basic Principles
    2.3.1.1 Concepts
    2.3.1.2 Transmittance and absorption
    2.3.1.3 How are transmittance (T) and absorption (A) Quantities?
    2.3.1.4 Experimental Procedure
  2.3.2 Component Parts
    2.3.2.1. Light Source
    2.3.2.2. Monochromatic
    2.3.2.3. Sample Holder
2.3.2.4. Detector and Readout Device 25

2.3.2.5. Incubation system 27
   2.3.2.5.1 Description of the system 27
   2.3.2.5.2 Component of incubation system 28

2.3.3 The effort has been focused on three areas 28

2.4. International Standard Organization (ISO 15189) 29

2.5. Calibration 30
   2.5.1 Report calibration 30
   2.5.2 Limit tolerance calibrations 30
   2.5.3 Calibration Requirements 31
   2.5.4 What Is Spectrophotometer Calibration? 32

CHAPTER THREE

Literature Review 34

CHAPTER FOUR

Materials and Methods 40

4.1. Materials 40
   4.1.1. Neutral density filter 40
   4.1.2. Thermometer 41
   4.1.3. Transmissometer 42

4.1.4 Data analysis 43

4.2 Methods 43
   4.2.1 Filters adjust and calibrate 43
      4.2.1.1 How to calibrate filters? 43
4.2.1.2 Procedure

4.2.2 Temperature adjust and calibrate
4.2.2.1 How to calibrate temperature?
4.2.2.2 Procedure

4.2.3 Lamp adjust and calibrate
4.2.3.1 How to calibrate lamp

CHAPTER FIVE

Results and discussions

Abstract

The aim of this study is to evaluate the efficiency and calibration of laboratories, spectrophotometers according to the specification (ISO 15189) and depending on the conditions (4.2.5 and 5.3.2) included in the items of laboratory equipment.

At the beginning, structured questioner was conducted to assess the technician’s awareness of instruments calibration. The practical results were analyzed by using Statistical package for social service (SPSS 15).

The study was applied on 40 spectrophotometers, which were calibrated by using special tools to show: the efficiency of filters to light, the severity of an accurate light degree and the ability of instrument to reach a temperature between (25±0.2°C and 37± 0.2°C) and which has a direct impact on clinical readings of instruments.

The analysis procedure showed that a significant improvement (by 100% and p > 0.05) in results after calibration, which was evaluated by using the probability of obtaining a test statistic (p-value) in T test, for example the obtained results before calibration: in filter 340 nm(P < 0.012) with percentage average 43.9%, the temperature within range 25±0.2°C (P < 0.001) with percentage average 8.3%, the temperature within 37± 0.2°C (P < 0.001) with percentage average 0.00%, and the degree of an accurate lamp without a filter 172 nA (P < 0.001) with percentage average 30.8%, which leads to conclude that a process of calibration of instruments must be performed at frequent intervals due to its importance in enhancement the clinical results.
الهدف من هذه الدراسة تقييم كفاءة ومعايرة أجهزة الطيف الضوئي بالمعامل وفقاً لمواصفة (ISO-15189) لمنظمة المعايير الدولية اعتماداً على الشروط (4.2 و 5.3.2) المضمنة في بنود أجهزة المعامل.

وقد أجريت الدراسة على عدد (40) جهاز طيف ضوئي بعد اجراه استبان لتقنية المعامل، وكان الرؤف العام منها تقييم مدى معرفة التقنيين بأسس معايير الأجهزة وخصوصاً كفاءة مرشحات الضوء، وشدة استضاءة المصباح درجة ومقدرة الجهاز للوصول لدرجة حرارة بين (±0.25° و ±0.2° C) وذك لاهتمامها المباشرة على تغيير قراءات الأجهزة.

في البدء تم جمع البيانات قبل وبعد إجراء المعایرة، وتم تحليلها باستخدام برنامج التحليل الإحصائي (SPSS-15)، وأظهرت نتيجة التحليل فرقاً تحسناً بنسبة 100% (p > 0.05) بعد المعایرة باستخدام الفرق في القيمة الاحتمالية للنسبة الموضوعة في الاختبار (p-value) وعلى سبيل المثال بعض النتائج قبل المعایرة: للمراحل (340 nm، والنتائج المماثلة له) 8.3% ودرجة الحرارة في درجة ±0.2° C (P < 0.001) والنتائج المماثلة لها (37 nm، والنتائج المماثلة له) 0.00% ودرجة استضاءة المصباح بدون فلتر 172 0.001 < (P < 0.001) مما استوجب اقتراح أن يتم عملية المعایرة على الأجهزة في فترات محددة ومتقاربة نظر للتغيرات البيئة والتذبذب في التيار الكهربائي في السودان، مما يؤثر سلباً في تغيير النتائج الطبية المستخرجة بهذه الأجهزة.
