

LIST OF FIGURES

Figure	Page
1.1 The layout of Vertisol area in Sudan after (Wilding and Puentes, 1988)	1
2.1 Typical form of SWCC (after Frudlud and Xing, 1994)	23
2.2 Graphic representation of a classical shrinkage curve	39
2.3 Conceptualized soil peds	43
3.1 Feature of experimental field lay out site I	60
3.2 Feature of experimental field lay out site II	62
3.3 The location of sites I and II	63
3.4 Typical tensiometer	71
3.5 Typical vacuum gauge	72
3.6 Digital moisture meter	73
3.7 Layout(X-Y) grids line spacing 0.2m	74
3.8 Vertical cross section through the cracks showing the triangular and rectangular shape	75
4.1 Green –Ampt model infiltration	79
4.2 Green –Ampt model infiltration	79
4.3 Schematic Representation and vertical section in a single crack (rectangular shape) proposal I	81
4.4 Schematic Representation and vertical section in a single crack (triangular shape) proposal II	84
5.1 Finite difference grid time space	89
5.2 Boundary nodes details	89
6.1 System of soil cracks in one meter square of the soil surface at site I	111
6.2 System of soil cracks in one meter square of the soil surface at site II	112
6.3 Shrinkage curve site I	115

Figure	Page
6.4 Shrinkage curve site II	115
6.5 The change in crack depth as relation of Ls, volumetric moisture content and clay contents power trend line (site I)	117
6.6 The change in crack depth as relation of Ls, volumetric moisture content and clay contents exponential trend line (site I)	118
6.7 The change in crack depth as relation of Ls, volumetric moisture content and clay contents polynomial trend line (site I)	118
6.8 The change in crack depth as relation of Ls, volumetric moisture content and clay contents logarithmic line (site I)	119
6.9 The change in crack depth as relation of Ls, volumetric moisture content and clay contents linear trend line (site I)	119
6.10 The change in crack depth as relation of Ls, volumetric moisture content and clay contents power trend line (site II)	120
6.11 The change in crack depth as relation of Ls, volumetric moisture content and clay contents exponential trend line(site II)	120
6.12 The change in crack depth as relation of Ls, volumetric moisture content and clay contents polynomial trend line (site II)	121
6.13 The change in crack depth as relation of Ls, volumetric moisture content and clay contents logarithmic line (site II)	121
6.14 The change in crack depth as relation of Ls, volumetric moisture content and clay contents linear trend line (site II)	122
6.15 Predicted and measured values of crack depth of Shambat site	123
6.16 Predicted and measured values of crack depth of Gezira site	123
6.17 Measured and predicted crack width for site I	126
6.18 Measured and predicted crack width for site II	126
6.19 Predicted and measured values of specific cracks area Gezira and Shambat sites	128
6.20 Predicted crack surface area by Equation (6.5) and (6.6)	129
6.21 Saturation ratio at a soil depth (0-0.2 m)	133

Figure	Page
6.22 Measured and predicted crack porosity for site I	138
6.23 Measured and predicted crack porosity for site II	138
6.24 Measured and predicted crack volume for site I	139
6.25 Measured and predicted crack volume for site II	139
6.26 Crack porosity as a function of depth for site I and II interpolated by laboratory estimator	140
6.27 Crack volume as a function of depth for site I and II as interpolated by laboratory estimator	141
6.28 Measured data for scenarios I, II and III and sum (I+II), proposal I	145
6.29 Measured and predicted cumulative infiltration soil with cracks scenario III, proposal I	146
6.30 Measured and predicted cumulative infiltration for cracks scenario II, proposal I	146
6.31 Measured data for scenarios I, II and III and sum (I+II), proposal II	148
6.32 Measured and predicted cumulative infiltration soil with cracks scenario III, proposal II	149
6.33 Measured and predicted cumulative infiltration for cracks scenario II, proposal II	149
6.34 Measured and predicted pressure suction	159
6.35 Soil moisture distribution in the soil profile for different times	160
6.36 Soil moisture distribution in the soil profile at different depth	163
6.37 Pressure distribution in the soil profile at different depth	163
6.38 Soil retention curve (iteration I)	164
