

DEDICATION

إلى روح أمي

وأبي

ACKNOWLEDGEMENT

First and foremost I should greatly thank the Almighty Allah for giving me the strength , patience and . confidence to finish this study

I also thank my supervisor , Dr. Hatim Idris for his . support and guidance

I would like to express my grateful thanks to Dr. Yahya Sabil the head of Bacteriology Department , Veterinary Research Institute Soba , for his kind support and useful . helping

My sincere appreciation to the staff of Bacteriology . Department In (V R I) for helping me in this research

I am deeply grateful to my family for their support , . encouragement and urge through this study

الملخص العربي

هدفت هذه الدراسة إلى قياس جودة الحليب الخام المستهلك العادي في مدينة

بحري .

جمعت 20 عينة حليب خام من منطقة بحري : 10 عينات من حليب الإبل و 10 عينات من حليب البقر .

أجرى العد البكتيري الكلى لعينات الحليب الخام المجمع من البقر والإبل .

عينات الحليب اجري الفحص المختبرى عليها لقياس المحتوى البكتيري عن طريق العد البكتيري الكلى . وكذلك معرفة أنواع البكتيريا الموجودة بالعينات عن طريق الكشف البيوكيميائى .

العد البكتيري الكلى تمت مقارنته بالموصفات السودانية والأمريكية .

العد البكتيري لحليب البقر تراوح بين 0.2×10^5 - 1.5×10^5 cfu/ml

العد البكتيري لحليب الإبل تراوح بين 0.2×10^5 - 1.5×10^5 cfu/ml

معظم عينات حليب الإبل وحليب البقر صنفت على أنها جيدة لأنها تحتوى على عد بكتيري أقل من 0.5×10^5 cfu/ml .

أوضحت نتائج التحليل الإحصائي للعد البكتيري الكلى لحليب الإبل والبقر الخام لا توجد أي فروق معنوية بين حليب الإبل والبقر الخام وكان نسبة الفرق المعنوى 0.336؛ حيث أن نتيجة حليب الإبل كانت 50×10^8 وحليب البقر كانت 30×10^9 .

في حليب البقر تم عزل البكتيريا وهي , , *Staphylococcus spp.* 8(30.8%) , *Streptococcus spp.* 4(15.4%) *Enterococcus spp.* 4(15.4%) , , *Acinobacter spp.* 2 (7.7%) , *Pseudomonas bacteria spp* 2(7.7%), *Yersenia pseudotuberculosis spp.* 2 (7.7%) , *proteus morganii* (*bacteria spp.* 2 (7.7%) , *Aerococcus spp.* 2 (7.7%

وقد دلت النتائج أن نسبة البكتيريا موجبة الجرام هي 50% والسالبة الجرام نسبتها 50% في حليب البقر.

في حليب الإبل فقد تم عزل البكتيريا التالية (*Staphylococcus spp* 4(16.7%) *Aerococcus spp* 4 (16.7%) *Listeria spp* 2(8.3%) , *Klebsiella spp* 2(8.3%) , *Micrococcus spp* 4 (16.7%), *Enterococcus spp* 4(16.7%) , *Vibrio metschnikovis spp* 2 (8.3%) and *Yersenia spp* 2(8.3% .

وقد دلت النتائج أن نسبة البكتيريا موجبة الجرام 75% والسالبة الجرام نسبتها 25% في حليب الإبل .

ABSTRACT

This study was aimed to determine the bacteriological aspect of

. raw milk in Bahry town

Twenty samples of raw milk were collected ,10 samples from cow's milk and 10 from camel's milk . total bacterial count of

. cow's and camel's raw milk were determined

Milk samples were analyzed for microbial quality attributes including total plate count (TPC).Also the bacteria were isolated

. and identified according to thier biochemical reactions

The total plate count was compared by The Sudanese and American Standards

The results of the total plate count for camel milk were 0.2×10^5 cfu/ml to 1.5×10^5 cfu/ml and 0.2×10^5 cfu/ml to 1.5×10^5 cfu/ml for cow milk. Most of camels and cows milk samples were classified as good because the total bacterial count was less than 0.5×10^5 cfu/ml

The statistical analysis of the total bacterial count showed no significance variation between cow's and camel's raw milk with level of significance (NS) 0.336. The camel's milk result was 50×10^8 and cow's milk result was 30×10^9

The bacteria isolated from cow's milk were *Staphylococcus* spp. 8 (30.8%), *Streptococcus* spp. 4 (15.4%), *Enterococcus* spp. 4 (15.4%), *Aerococcus* spp. 2 (7.7%), *Acinobacter* spp. 2 (7.7%), *Pseudomonas* bacteria spp. 2 (7.7%), *Yersenia pseudotuberculosis* spp. 2 (7.7%) and *proteus morganii* 2 (7.7%)

The results showed that the gram (-)ve bacteria in cow's milk were 50% and gram (+)ve bacteria were 50%

The bacteria isolated from camel's milk were *Staphylococcus* spp. 4 (16.7%), *Aerococcus* spp. 4 (16.7%), *Listeria* spp. 2 (8.3%), *Klebsiella* spp. 2 (8.3%), *Micrococcus* spp. 4 (16.7%),

Enterococcus spp. 4 (16.7%) ,*Vibreometschnikovis spp.* 2
. (8.3%) and *Yersenia spp.* 2 (8.3%

The gram (+ve) bacteria were 75% while gram (-ve) bacteria
. in camel's milk were 25%
