Fig. (54): Average ionized ammonia concentration (mg/l) of water from different sources…………………………………… 104

Fig. (55): Average unionized ammonia concentration (mg/l) of Water from different sources………………………………… 105

Fig. (56): Average nitrate concentration (mg/l) of water from different sources…………………………………………… 106

Fig. (57): Average nitrite concentration (mg/l) of water from different sources…………………………………………… 107

Figure (58): Average hydrogen ion concentration (pH) of water from different sources…………………………………… 108

Fig. (59): Average haemoglobin concentration of fish as affected by water characteristics in different fishponds and control.. 115

Fig. (60): Average packed cell volume of fish as affected by water characteristics in different fishponds and control.. 116

Fig. (61): Average mean corpuscular volume of fish as affected by water characteristics in different fishponds and control.. 117

Fig. (62): Average mean corpuscular haemoglobin of fish as affected by water Characteristics in different fishponds and control……………………………………… 118

Fig. (63): Average Red Blood Cell of fish as affected by water characteristics in different fishponds and control……… 119

Fig. (64): Average White Blood Cell of fish as affected by water characteristics in different fishponds and control……… 128

Fig. (65): Average lymphocytes of fish as affected by water characteristics in different fishponds and control……… 129
Fig. (66): Average monocytes percentage of fish as affected by water characteristics in different fishponds and control. 130
Fig. (67): Average neutrophils percentage of fish as affected by water characteristics in different fishponds and control. 131
Fig. (68): Average thrombocytes percentage of fish as affected by water characteristics in different fishponds and control. 132
Fig. (69): Average esinophils percentage of fish as affected by water characteristics in different fishponds and control. 133
Fig. (70): Average basophils percentage of fish as affected by water characteristics in different fishponds and control. 134
