SUDAN UNIVERSITY OF SCIENCE & TECHNOLOGY

College Of Graduate Study

Importance of Applying Quality Control in Elgadida X-Ray Department of K.T.H

Prepared By:
Huda Abdella Hamid

A Thesis Submitted For Partial Fulfillment Of M.Sc Degree in Diagnostic Radiologic Technology

Under Supervision of:
Dr. Ibrahim A. Rahim Shaddad
Ph.D in Nuclear Physics

October 2004

قال تعالى:
صدق الله العظيم

# Chapter One

**Introduction**

1.1. Quality assurance  
1.2. Research objectives  
1.3. The reasons of choosing this topic for research  
1.4. Methodology  
1.5. Hypothesis  
1.6. Type of study

# Chapter Two

**Literature Review**

2.1. Quality assurance (QA)  
2.1.1. Quality assurances in diagnostic radiology  
2.1.2. Quality control (QC)  
2.1.3. Radiographic quality control  
2.1.3.1 Image quality control  
2.1.4. Quality assurance programme (QAP)  
2.1.5. Quality Administrative procedures (QADP)  
2.1.6. Benefits of quality assurance program  
2.1.7. Implementing a quality assurance program  
2.1.8. The departmental QA Committee  
2.1.9. The framework of a quality assurance program  
2-2 Quality control program for radiographic units  
2-2-1 Visual inspection
2-2-2 Environmental inspection
2-2-3 Performance testing
2-2-4 Reject Analyses
2-2-5 Radiation safety policies and procedures
  2-2-5-1 Policy for holding patient
  2-2-5-2 Policy for presence of individuals in the room during radiation exposure
  2-2-5-3 Policy for pregnant patients
  2-2-5-4 Policy for pregnant Employees
2-2-6 Set of QC protocols are used for the x-ray diagnostic machines. Those protocols are including the following
  2-2-6-1 Total radiographic system check for image quality
  2-2-6-2 Consistency of radiation output using a digital KV meter
  2-2-6-3 Consistency of radiation at different MA setting using a digital meter
  2-2-6-4 Assessment of kilovotage applied to the x-ray tube using digital meter
  2-2-6-5 Accuracy of exposure timer using a spinning top
  2-2-6-6 Accuracy of exposure timer using digital timer meter
  2-2-6-7 Assessment of focal spot size using focal spot test tool
  2-2-6-8 Accuracy of collimation of the light beam diaphragm and x-ray beam alignment using the test tool
  2-2-6-9 Accuracy of collimation when using non adjustable cones and diaphragm
  2-2-6-10 Assessment half value layer (HVL) using test tool filtration

department

4.1.1.6. Availability of test tools

4.1.1.7. Acceptance test of the machine in the department:

4.1.1.8. Training courses for the technologist in the department.

4.1.1.9. The present of radiation protection officer

4.1.1.10. Result of applying reject analysis in the department

4.1.2. Result of reject analysis

4.1.3. Testing of x-ray tube

4.1.3.1. KVP and time accuracy

4.1.3.2. Relative MA & MAS linearity (using the KVP meter)

4.1.3.3. MAS Consistency

4.1.3.4. KVP, time Reproducibility and linearity tests

4.1.3.5. Measurements of HVL of the x-ray unit

4.1.3.6. Check of Radiation field Accuracy of collimator and LBD

4.1.3.7. Focal spot size test

4.1.4. Testing of darkroom, cassette, intensifying screen and films

4.1.4.1. Test of light tightness of the darkroom

4.1.4.2. Safe light test

4.1.4.3. Testing of intensifying screen

4.1.4.4. Testing of cassettes

4.1.4.5. Test of films sensitometry

4.1.4.6. Test of manual processor

4.1.4.7. Test of grid alignment & movement grid

4.2 Discussion

4.2.1. Effect of implementing of some QA program to the
performance in Elgadida X-ray department

4.2.1.1. Meeting  
96

4.2.1.2. Courses  
97

4.2.1.3. Reject Analysis  
97
