# Table of Contents

## Chapter One:

1.1 Introduction

Table (1.1) Manufacturing Process

Table (1.2) Hide & Skin production (,000) 1992-2001

Table (1.3) Animal population in Sudan (,000) (1990/1991)

Table (1.4) Results of parameters analysis from soba – treatment plan (2001)

Table (1.5) Results from soba sewage plant (Average) year 2002

Table (1.6) Results Khartoum Tannery for waste water year 2001

Table (1.7) Results from soba sewage plant (Average) year 2003

Table (1.8) Average pollution load from 5 tanneries in Yugoslavia -1983

Table (1.9) Allowed targets loads in some countries

Table (1.10) Prescriptions for discharging in France & Yugoslavia

Table (1.11) Prescriptions for discharging tannery effluent in Sudan

## Chapter Two: Literature Review

2-1 Hides and skins

2-1-1 Chemistry of hides and skins

2-1-1-1 Chemical constituents

Figure 2-2 Anatomical structure of hides & skins

2-2 Preservation of hides and skins

2-2-1 Wet salting

2-2-2 Brining

2-2-3 Dry salting

2-2-4 Air drying

2-2-5 short - term curing

2-2-5-1 Cooling and light refrigeration

2-2-5-2 Treatment with antiseptics

2-3 Hides and skins defects

2-3-1-1 Damages caused during animal life
Chapter Three: Materials and Methods

3-1 Raw materials 41
3-2 Experimental works 41
3-2-1 Soaking 42
3-2-2 Unhairing and liming 42
3-3 Method of sulphide determination 45
3-4 Method of determination of calcium 46
3-5 Chemical analysis 48
3-5-1 Sampling location for skins 48
3-5-2 Preparation of sample 48
3-5-3 Determination of moisture 48
3-5-4 Determination ash content 49
3-5-5 Determination of fat content. H2N2 Analysis 49
3-5-6 Determination of skin substance by total kjeldahl nitrogen 50
3-6 Physical analysis 51
3.6.1 Preparation of sample
3.6.2 Measurement of thickness
3.6.3 Measurement of tensile strength and % of elongation
3.6.4 Measurement of distension and strength of grain by ball burst test

Chapter Four: Results and discussions

Table (4.1) Chemical analysis of fresh & used liquors – Calculation
Table (4.2) Comparison of % Chemicals and water
Table (4.3) Amounts of sodium sulphide and calcium
Table (4.4) Degree of swelling and efficiency of unhairing.
Table (4.5) Amount of Na2S and lime added to spent liquors and pHs
Table (4.6) Chemical analysis of leathers.
Table (4.7) Conventional unhairing compared to recycling methods.
Table (4.8) Physical properties of leather
