

الآية

بسم الله الرحمن الرحيم

قال تعالى

{وَقُلْ اَعْمَلُوا فَسَيَرَى اللَّهُ عَمَلَكُمْ وَرَسُولُهُ وَالْمُؤْمِنُونَ
وَسَتُرَدُّونَ إِلَىٰ عَالِمِ الْغَيْبِ وَالشَّهَادَةِ فَيُنَبِّئُكُمْ بِمَا كُنْتُمْ تَعْمَلُونَ}

(صدق الله العظيم)

(سورة التوبة 105)

Abstract

This study conducted to establish a population database for pancreas length and width using (CT) scan and classify the texture of computed tomography images of pancreas in diabetic patient and find the values of various parameter of texture prosperities for classification. The data were collected from 213 non- diabetic with no history of pancreas disease who had undergone abdominal CT scan between 2015 and 2017, and ages of 2 to 97years old. The study revealed that the pancreas measurement was 29.94 ± 6.36 for head length, 25.07 ± 5.62 mm for head AP diameter, 61.43 ± 15.36 mm for body length, 22.74 ± 6.08 mm for body AP diameter, 33.94 ± 9.11 mm for tail length, 19.83 ± 6.43 mm for tail AP diameter and pancreas CT number which was evaluated as Hounsfield was 49.11 ± 8.81 for pancreas , 49.46 ± 8.03 for spleen and 37.61 ± 5.65 for vertebral body diameter.

Data were presented as mean and standard deviation (SD) for all of the variables. Showed results which were significant at $P < 0.05$. We measured pancreas length and width in Pancreas measured values were computed from the contour of the pancreas on each CT image. In addition to total pancreas measurements, the density was determined by CT Hounsfield (HU). And in childhood and adolescence, the pancreas measurements and CT(HU) increased linearly with age and then declines thereafter. We provide enduring population highlighting data for pancreatic parenchymal measurements in Sudanese as well pancreatic CT (HU).

Also this study concern to characterize the pancreas area to head, body and tail using Gray Level Run Length Matrix (GLRLM) and extract classification features from CT images. The GLRLM techniques included eleven's features. To find the gray level distribution in CT images it complements the GLRLM features extracted from CT images with runs of gray level in pixels and estimate the size distribution of the sub patterns. analyzing the image with Interactive Data Language software

to measure the grey level distribution of images. The results showed that the Gray Level Run Length Matrix and features give classification accuracy of pancreas head 89.2%, body 93.6 and the tail classification accuracy 93.5%. The overall classification accuracy of pancreas area 92.0%. Also this study c the calcification accuracy of the normal pancreas 100%, diabetic pancreas is 100% and over all accuracy of pancreas area100%.

These relationship patients are stored in a Texture Dictionary that can be later used to automatically annotate new CT images with the appropriate pancreas area names.

ملخص البحث

أجريت هذه الدراسة لإنشاء قاعدة بيانات سكانية لطول وعرض البنكرياس باستخدام التصوير المقطعي المحوسب وتحليل نسيج الصور المقطعية المحوسبة للبنكرياس في مرضي السكري باستخدام برامج تحليل الطيف المحوسبة (IDL). تم جمع البيانات من 213 من عينه طبيعية مرجعية مع عدم وجود تاريخ مرضي للبنكرياس للذين خضعوا لإجراء فحص أشعة مقطعية للبطن باستخدام جهاز الأشعة المقطعية متعددة المقاطع بين عامي 2015 و 2017، من سن 2 إلى 97 سنة من العمر. أظهرت الدراسة أن قياس البنكرياس كان 6.36 ± 29.94 ملم لطول الرأس و 5.62 ± 25.07 ملم لقطر الرأس و 15.36 ± 61.43 ملم لطول الجسم و 6.08 ± 22.74 ملم لقطر الجسم و 9.11 ± 33.94 ملم لطول الذيل و 6.43 ± 19.83 ملم لقطر الزيل كثافة النسيج الطبيعي للبنكرياس وجدت 8.81 ± 49.11 للبنكرياس، 8.03 ± 49.46 للطحال وقيمة قطر الجسم الفقري البطني 5.65 ± 37.61 . تم عرض البيانات على أنها وسط حسابي وانحراف معياري لجميع المتغيرات. أظهرت النتائج التي كانت مطابقتها ل $P > 0.05$. قمنا بقياس طول وعرض البنكرياس وتم حساب القيم المقاسة من حدود البنكرياس على كل صور الأشعة المقطعية. بالإضافة إلى قياس البنكرياس الكلي تم قياس كثافة النسيج الطبيعي للبنكرياس. وأظهرت النتائج أنه خلال مرحلة الطفولة والمراهقة، أن قياسات البنكرياس و كثافة النسيج الطبيعي للبنكرياس زادت خطيا مع التقدم في السن ثم انخفضت بعد ذلك.

أيضا هذه الدراسة تتعلق بتوصيف منطقة البنكرياس إلى الرأس والجسم والذيل باستخدام الأوامر الإحصائية العليا وشملت أحد عشر خاصية للعثور على توزيع امتداد مستوى الرمادي في الصور المقطعية المستخرجة من الصور المقطعية وتحليل الصورة باستخدام برنامج IDL لقياس توزيع مستوى الرمادي من الصور وأظهرت النتائج أن حساسية التصنيف لمنطقة الرأس 89.2% و 93.6%، للجسم ودقة تصنيف الذيل 93.5%. دقة التصنيف العام لأجزاء للبنكرياس 92.0%. وأيضا في هذه الدراسة تم إجراء مقارنه بين البنكرياس الطبيعي وبنكرياس مرضي السكري وأظهرت النتائج أن حساسية التصنيف للبنكرياس الطبيعي 100% و للبنكرياس مرضي السكري 100%. أي بنسبة تفريق تصل الي 100% ما بين البنكرياس الطبيعي وبنكرياس مرضي السكري.

هذه العلاقات خزنت في شكل مترجم يمكنه التعرف علي اجزاء البنكرياس بصوره تلقائية وتسميه مناطق البنكرياس الثلاثة كما هي مخزنه في المترجم.

Dedication

This work is lovingly dedicated:

*-To my mother **Amna Elameen**, for her warm love and care support*

*-To my father **Elhaj Elbasheir** without his support this project*

would not have been made possible

-To my sisters, brothers for their help and support

- To my friends for their valuable advice

- To the all dearest people in my life

Acknowledgment

-I would like to thank ALLAH who has blessed and guided me to accomplish this thesis.

*-I wish to express my sincerest gratitude to my supervisors **Dr. Mohamed Alfadil**, College of Medical Radiological Sciences at Sudan university of Science and Technology, for his constant supervision, inexhaustible patience, constant encouragement, and for giving me a valuable times, guidance, criticism and corrections to this thesis from beginning up to end, and **Dr. Caroline Edward Ayad**, College of Medical Radiological Sciences at Sudan university of Science and Technology for her full patience and cooperation.*

*-I also would like to thanks All The Technologists who help me as skillful technical assistance and all staff in **Royal Care International Hospital** especially CT department ; **Mohamed Slman** ,**Mohammed A. Alwahab** and **Azzaytona Specializes Hospital** for their help in collection of the data and support .*

*- I thank **Dr .Suhaib Mohamed salih** for helping and advance.*

*- I also would like to thanks **Naif Mohammed**, **Mohammed Hashim** and **Mujtaba Elgazali**.*
