CHAPTER ONE		
1.1	Introduction	1
1.2	Epidemiology	1
1.3	Transmission	2
1.4	Life cycle	3
1.4.1	Infection and exoerythrocytic development	3
1.4.2	Erythrocytic development	4
1.4.3	Invertebrate stages	5
1.5	Disease	5
1.5.1	Classic malarial paroxysm	6
1.5.2	Cerebral malaria	7
1.6.1	Immunity to malaria	7
1.6.2	Immunity and resistance	8
1.7	Diagnosis	9
1.7.1	Microscopy diagnosis	9
1.7.2	Quantitative Buffy Coat (QBC ®)	10
1.7.3	The direct acridine orange staining	11
1.7.4	DNA probes and polymerase chain reaction	11
1.7.5	Detection of <i>P. falciparum</i> antigen	12
1.7.6	Other direct diagnostic methods	13
1.7.7	Detection of Plasmodia specific antibodies	14
1.7.8	Application of immunological methods	15
1.7.8.1	Diagnosis of clinical attacks	15
1.7.8.2	Epidemiological studies	15
1.7.8.3	Donor blood screening	16
1.8	Blood type	16
1.8.1	Blood group systems	17
1.8.2.1	Rhesus factor	18
1.8.2.2	The Rh factor and antigens	19
1.8.3	Malaria: evidence for selection of blood group phenotypes that are rare outside areas in which malaria is endemic	19
1.8.4	Different strains of <i>P. falciparum</i> use different blood group proteins as receptors	22
1.8.5	Malaria and blood group	24
1.8.6	Severity of <i>falciparum</i> malaria and blood group	25

Table	SUBJECT	Page NO
Table 1	The overall prevalence rate of malaria in all areas investigated	33
Table 2	The prevalence rates of malaria in each area investigated	33
Table 3	The prevalence rates of malaria infection in all areas investigated according to gender	34
Table 4	The prevalence rates of malaria in all areas investigate according to age group	34
Table 5	The prevalence rates of malaria infection according to blood group	35
Table 6	The different levels of parasitaemia for different blood groups	36
