قال تعالى :

بسم الله الرحمن الرحيم

﴿الْحَمْدُ لِلّٰهِ الَّذِي أَنْزَلَ عَلٰى عَبْدِهِ الْكِتَابَ وَلَمْ يَجْعَلْ لَهُ عِوَاجًا (1) قَيِّمًا لِيُنذِرَ بِأُسَاطِيرِهِ شَدِيدًا مِنْ لَدُنْهُ وَيُبَشِّرُ الْمُؤْمِنِينَ الَّذِينَ يَعْمَلُونَ الصَّالِحَاتِ أَنَّ لَهُمْ أَجْرًا حَسَنًا ( )﴾

سورة الكهف الآيات 1-2

صدق الله العظيم

## **Dedication**

I dedicate this work  
to my parents,  
husband,  
brothers and sisters.

## **Acknowledgment**

Praise to Alla Almighty, who gave me health and strength to complete this research.

My gratitude and appreciation are due to my supervisor Professor Mohamed El Mubarak Osman whose supervision resulted in this study. My thanks are due to my co-supervisor Dr. Elfatih Ahmed Hassan who supported me with endless efforts.

My deep thanks go to Professor Saphwan Al-Assaf - Chester university, UK - Seif Aldawla Ibrahim - Sinnar university. staff of the faculty of science Sudan University of Science and Technology, Jameel alla Jomaa Khartoum University faculty of forest, Dr Ahamed Ali- Faculty of Agriculture Shampat Center Laboratory Khartoum university, Alwaleed Ali - Nopic company, staff of Research and Industrial Consultancy Center, Mr. Zokaa Shmseldeen Ahamed- International Standardizations Organization, Fadl Elseed Jobara Saudi Arabia for technical support.

Thanks and appreciation are due to Professor Nour Eldayem Osman the Vice-Chancellor of Elimam Elmahadi University for financial and moral support.

## Abstract

Forty five samples of the gum from *Azadirachta indica* gum were collected from three locations (15 samples from each location) Khartoum, White Nile and Northern Kordofan states. from Sudan, during seasons 2014-2016; Three composite samples were prepared form the fifteen samples of each location by mixing. Chemical and Physicochemical properties were studies amino acids profile, molecular weight and molecular weight distribution, rheological behavior and emulsification properties of *Azadirachta indica* gum.

The results show the ranges for moisture content 11.2 - 12.2%, Ash content 3.0 – 3.30%, pH 4.2 – 4.8, Specific optical rotation -65.5 – -67, color Gardena (0.1 - 0.9), nitrogen content 4.8– 5.2%, hence protein% 30.2– 31.3%, tannin .04 –.010%, acid equivalent weight 1543 – 1708, total uronic acid% 11.3 – 12.5% and intrinsic viscosity  $24 - 36 \text{ cm}^3 \text{g}^{-1}$ .The calorific value was 4.3 kJ/mole. Acid hydrolysis revealed a sugar content Arabinose 14–22%, Galactose 17– 24%, Xylose 3 –4% and Rhammnose 2 –4%. The Cationic composition showed that Mg 57.1–38.9, Na 24.5–13.9, Ca12.6– 9.6, K11.9–6.2, Cu 0.11–0.16, Zn 0.06–0.08, and P0.0.2–0.04mg/g. The amino acid results shows the presence of seventeen amino acids namely, Asparagine, Threnine, Serine, Glutamine, Proline, Glysine, Cysteine, Alanine, Valine, Methionine, Isoleucine, Leucine, Tyrosine, Phenylalanine, Histidine, Lysine, and Araginine. Number average molecular weight ( $M_n$ ) was range in the  $6.4 \times 10^5 - 12 \times 10^5 \text{ g/mol}$ . The molecular weight determined by gel permeation chromatography (GPC-MALLS) for the three location composite (Khartoum, White Nile and Northern Kordofan states) respectively. The samples have Molar masses of  $4.8 \times 10^5$ ,  $4.00 \times 10^5 \text{ g/mole}$ ,

and  $3.6 \times 10^5$  g/mole. With a radius of gyration ( Rg) in the range of (25.6 – 36.6 – 66 ), respectively. *Azadirachta indica* gum samples (composite ) collected from Khartoum location show an Arabinogalactan protein (AGP) with total molecular weight  $3.8 \times 10^5$  mass% 1.34, and Rg 63.7 . The second and third fractions correspond to an (Arabinogalactan AG + Glycoprotein GP) have molecular weight of  $3.292 \times 10^5$  g/mole and mass recovery of 98.13. GPC-MALLS for neem gum samples collected from White Nile shows an AGP with a molecular weight of  $4.00 \times 10^5$ , mass% 1.77, and Rg 43.2 The second and third fractions are (AG +GP) have a molecular weight of  $3.193 \times 10^5$  g/mole , mass% 98.66, GPC-MALLS for *Azadirachta indica* gum samples collected from Northern Kordofan location shows an AGP with a molecular weight of  $3.8 \times 10^5$ , mass%.87, and Rg 52.2 The second and third fractions are (AG +GP) have a molecular weight of  $3.292 \times 10^5$  g/mole , mass% 99.13. The rheological behavior of *Azadirachta indica* gum show a Newtonian behavior All emulsions show Low droplets size, exhibit a typical bimodal droplet size distribution with a pronounced shoulder reflecting best formity and stable emulsions.

The gum emulsion shows first grade emulsification properties. *Azadirachta indica* gum shows insignificant differences (were observed) samples collected from the three different locations from Sudan.

## المستخلص

تم جمع خمس وأربعون عينة من صمغ ازدراختا انديكا من ثلاثة مناطق ( 15 عينة من كل منطقة) من ولايات الخرطوم، النيل الأبيض وشمال كردفان - السودان خلال موسم 2014-2016. تم عمل ثلاثة مخلوطات للخمسة عشر عينة لكل منطقة. تمت دراسة الخواص الكيميائية الفيزيوكيميائية والأحماض الامينية ، الوزن الجزيئي وتوزيعات الكتلة الجزيئية ، الريولوجي والخواص الاستحلابية لصمغ ازدراختا إنديكا.

النتائج أوضحت أن متوسط محتوى الرطوبة 12.2 – 11.2% محتوى الرماد 3.0 – 3.3%， درجة الحموضة 4.8 – 4.2، الدوران الضوئي 65.5 – 67-، درجة اللون 0.1 – 0.9، محتوى النيتروجين 4.8 – 5.2% ، محتوى البروتين 30.2 – 31.3%， محتوى التانين 0.010 – 0.04. % الوزن المكافئ للحامض 1708 - 1543 حامض البيرنيك الكلى 12.5 – 11.3%， الزوجة 36 – 24 سم<sup>3</sup>/جرام<sup>1</sup> والقيمة السعرية ~ 3.4 كيلو جول/مول. التحلل الحمضي متبعا بقياسات كروماتوجرافيا السائل ذات الأداء العالي كشفت ان محتوى السكر كالآتي: ارابينوز 14- 22%， جلاكتوز 17- 22%， زايلوس 3- 4% ورامنوز 2 – 4%. تمت دراسة العناصر للعينات الثلاث وتدرج قيم العناصر الماغنيسيوم 57.1-38.9 ، الصوديوم 13-124.5 ، الكالسيوم 12.6-9.6 ، البوتاسيوم ، 6.2-11.9 النحاس 0.11-0.19 ، الخارصين 0.06-0.08 والفسفور 0.02-0.04 ملم/جرام. أظهرت دراسة محتوى الأحماض الامينية ان صمغ ازدراختا إنديكا يحتوي علي سبعة عشر من الأحماض الامينية كل من اسبارجين، ثيرنين، سيرين، جلتوماين، برولين، جلايسين، الانين، سيوسين، فالين، ميثولين، ايسولايسين، ليوسين، تيروسين، فانيالالين، هستدين، لوسين وارجينين وجد ان متوسط الرقم الجزيئي لصمغ ازدراختا إنديكا  $12.0 \times 10^5$  ،  $10.8 \times 10^5$  و  $6.4 \times 10^5$  جرام/مول لمناطق الخرطوم، النيل الأبيض وكردفان على التوالي ووجد Rg يساوى 66، 25.6 و 36.6 على التوالي. تم تقدير الوزن الجزيئي عن طريق كروماتوجرافيا الاستبعاد بالجل للثلاث مناطق الخرطوم ، النيل الأبيض وشمال كردفان على التوالي وجد انه يساوي  $4.8 \times 10^5$  جرام/مول ،  $4.00 \times 10^5$  جرام/مول و  $3.6 \times 10^5$  جرام/مول. أظهرت كروماتوجرافيا الاستبعاد بالجل لعينات منطقة الخرطوم ثلاثة أجزاء: الاربينوجالاكتان بروتين، بوزن جزيئي  $3.8 \times 10^5$  ، وكتلة 1.34%， و Rg 63.7. والجزء الثاني والثالث (الاربينوجالاكتان جلايكو بروتين) بوزن جزيئي  $3.292 \times 10^5$  جرام/مول، وكتلة 99.13%. أظهرت كروماتوجرافيا الاستبعاد بالجل لعينات منطقة النيل الأبيض أيضا ثلاثة أجزاء اربينوجالاكتان بروتين، بوزن جزيئي  $4.00 \times 10^5$  ، وكتلة 1.77%， و Rg 43.2. والجزء الثاني والثالث (اربينوجالاكتان و جلايكوبروتين) بوزن جزيئي  $3.193 \times 10^5$  جرام/مول، وكتلة 98.66 %. كما أظهرت كروماتوجرافيا الاستبعاد بالجل لعينات

منطقة شمال كردفان أيضاً ثلاثة أجزاء اربينوجالاكتان بروتين، وزن جزيئي  $10^5 \times 3.8$ ، وكتلة 87%، و  $Rg$  52.2. والجزء الثاني والثالث (اربينوجالاكتان و جلايكوبروتين) وزن جزيئي  $3.292 \times 10^5$  جرام/مول، وكتلة 99.13%. دراسة الريولوجي لسمغ النيم أظهرت خصائص نيوتونية كل المستحلبات أظهرت قطرات صغيرة لل قطرات وبتوزيعات مختلفة، الشيء الذي يفسر تجانس و ثبات المستحلبات. كما اظهرت الدرجة الأولى في الخصائص الإستحلبية.

سمغ أزدراختا إنديكا أظهر مع الملاحظة من النتائج المدروسة ان هنالك اختلافات ضئيلة بين العينات التي تم جمعها من ثلاثة مناطق مختلفة في السودان.
