## **ACKNOWLEDGEMENTS**

My great gratitude to God for succeeding to accomplish this thesis.

Sincerely I am indebted to Dr. Hag Hamad Abdelaziz, the main supervisor of this research for his advice and patience and keen supervision.

Great gratitude to the co-supervisor of this research, Dr. Mohamed Alamin for his advice and orientation.

Special thanks to Prof. Yagoob Abdalla and Dr. Ibrahim Aldikhri for their advice and comments. Great gratitude goes to Prof Altigani Mirghani, Dr. Hassan Osman, Dr. Abdelgalil Doga and Ustaz Salh Alagb for their assistance.

Thanks to Alfashir University for giving the chance to do a Ph.D. degree.

Also, I am thankful to the analysis technicians Ustaz Abdelgani Ahmed and Ustaz Mohammad Ibrahim. Thanks go to Ustaz Haytham Mohamed Ahmed for good typing and organization. Great thanks to the farmers for giving me the needed information.

## **ABSTRACT**

This study shed light on the main constraints of agricultural development in the traditional rainfed sector of Sudan through investigating the situation of agriculture in North Darfur State, more specifically in Darelslam and Umkdada districts.

The study area is one of the most important agricultural regions in North Darfur State; it contributes in food production beside cash crops. Despite the above mentioned importance, the agricultural production in DarElslam and Umkdada districts suffers many problems (economical, technological, environmental and social problems) that hinder its development and success resulting in low yield and low income. These problems are:

- a. The shortage of agricultural credit, agricultural inputs, low farm-income and limited chances of off-farm income (SMAAWI, 1994 and 2004, ITDG, 2000 and 2001 and MET, 2000).
- b. The limited use of technology as a result of lack of technology and absence of know-how (SMAAWI, 2004).
- c. Variability of rain in amount and distribution within the same year and from year to year and low soil fertility (SMAAWI, 2002, 2003, 2005 and 2006, Amin, 2002, MET, 2000 and ITDG, 2000).
- d. Darfur conflict and its secretion of armed robbery and tribal conflicts (SMAAWI, 2004).

The general objective of the study is to describe and analyse the existing farming systems in the study area (DarElslam and Umkdada districts). Specifically the study intended to:

1. Describe and analyze the existing nature of traditional rainfed agriculture.
2. Specify the main factors affecting crop production.

3. Determine the optimum cropping pattern.
4. Identify the constraints of increasing farm income in the study area.
5. Assess the impact of some scenarios on farm income.
6. Provide some policies based on the findings of the study.

The study mainly depended on primary data of the agricultural season 2006/07 collected from the targeted farmers through direct interviewing using questionnaires.

Descriptive statistics, Regression and linear programming were used in the data analysis.

The results of Regression analysis revealed that the produced crops in season 2006 were significantly affected by some factors, including most important factors that affect the crops output. Millet production affected by the total land under millet, labour, capital expenses, agricultural extension, period of cropping and rain quantity.

The sorghum production affected by total land of sorghum, off-farm income and agricultural extension.

The important significant factors affecting groundnuts production were total land under groundnuts, labour, period of cropping, agricultural extension, crop rotation and dry spell.

Okra production affected by the total land under okra, seed rate, education and security situation.

The main results of linear programming showed that the basic models gave a cropping pattern different from real farmers' production plan. Groundnuts is the more profitable crop at prevailing price and productivity of season 2006/07. The basic models solution gave a profitable objective function while in reality the farmers gained a loss. Family labour and operating capital represent the main constraints of agricultural production in the study area. Application of recommended

technologies, increasing output prices and lowering production costs gave high support to the farm income in the study area.

In order to achieve agricultural development and farmers' food security in the study area the study gave some recommendations including the following recommendations:

1. Supply the farmers with agricultural inputs through (a) distribution of inputs especially seeds through repayment (in kind) after harvesting and (b) entering the durable inputs such as pesticides pumps and hand implements through rent system.
2. Support agricultural extension to be more efficient and effective in adoption of recommended improved technologies.
3. Find credit sources in the rural areas and facilitate funding process.
4. Encourage government intervention to stabilize the output prices.

## **خلاصة الأطروحة**

هذه الدراسة تلقي الضوء على أهم معوقات التنمية الزراعية بالقطاع المطري التقليدي في السودان من خلال دراسة حالة الزراعة بولاية شمال دارفور أكثر تحديداً من خلال منطقتي دار السلام وأم كدادة.

تعتبر منطقة الدراسة من أهم المناطق الزراعية بولاية شمال دارفور حيث تساهم في إنتاج الغذاء بجانب المحصولات النقدية. بالرغم من الأهمية المذكورة أعلاه الإنتاج الزراعي بمنطقتي دار السلام وأم كدادة يعني من عدة مشاكل (اقتصادية وتقنية وبئية واجتماعية) والتي تعوق تنميته ونجاجه مؤدية إلى الانخفاض في الإنتاجية والدخل المزرعي. هذه المشاكل تتمثل في :

أ. نقص التمويل الزراعي والمدخلات الزراعية وانخفاض الدخل المزرعي ومحدودية الفرص في الحصول على الدخل غير المزرعي (وزارة الزراعة ولاية شمال دارفور، 1994 ، 2004 ومجموعة تنمية التقنية الوسيطة، 2000, 2001 ووزارة البيئة والسياحة، 2000).

ب. محدودية استخدام التقانة نتيجة لنقص التقانة وغياب المعرفة (وزارة الزراعة ولاية شمال دارفور، 2004) .

ج. تذبذب الأمطار من حيث الكمية والتوزيع في ذات السنة ومن سنة أخرى وانخفاض خصوبة التربة (وزارة الزراعة ولاية شمال دارفور, 2002, 2003, 2005, 2006 وأمين، 2002 ووزارة البيئة والسياحة، 2000 ومجموعة تنمية التقنية الوسيطة، 2000).

د. الصراع في دارفور وافرازاته النهب المسلح والحرabات القبلية (وزارة الزراعة ولاية شمال دارفور، 2004) .

الهدف الرئيسي من هذه الدراسة هو وصف وتحليل النظم الزراعية الحالية الموجودة بمنطقة الدراسة (دار السلام وأم كدادة) أكثر تحديداً هدفت الدراسة إلى ما يلي :

1. وصف وتحليل طبيعة الزراعة المطري التقليدية.
2. تحديد العوامل الرئيسية التي تؤثر على إنتاج المحاصيل الرئيسية.
3. تحديد التركيبة المحصولية المثلثي.
4. التعرف على معوقات زيادة الدخل المزرعي بمنطقة الدراسة.
5. تقييم اثر بعض السيناريوهات على الدخل المزرعي.
6. تقديم بعض السياسات بناءاً على النتائج التي توصلت إليها الدراسة .

اعتمدت الدراسة بصورة أساسية على المعلومات الأولية للموسم الزراعي 2006/2007 التي جمعت من المزارعين المستهدفين بواسطة مقابلة الشخصية مستخدمة الاستبيان.

استخدمت الدراسة الإحصاء الوصفي وأسلوب البرمجة الخطية والانحدار في تحليل المعلومات التي جمعت.

أوضحت نتائج تحليل الانحدار أن المحاصيل المنتجة في الموسم الزراعي 2006 تأثرت معنويًا ببعض العوامل تضم العوامل الأكثر أهمية في التأثير على إنتاج المحاصيل. إنتاج الدخن تأثر بالمساحة المزروعة بالدخن والعملة والخدمات الرأسمالية والإرشاد الزراعي وفترة الزراعة وكمية المطر. إنتاج الذرة تأثر بالمساحة المزروعة بالذرة والدخل غير المزراعي والإرشاد الزراعي. أهم العوامل المعنوية التي أثرت في إنتاج الفول السوداني هي المساحة المزروعة وفترة الزراعة والإرشاد الزراعي والدورة الزراعية والصبغة. إنتاج البا米ة تأثر بالمساحة المزروعة ومعدل البذور والتعليم والحالة الأمنية.

النتائج الرئيسية للبرمجة الخطية أوضحت أن النماذج الأساسية أعطت تركيبة محصولية تختلف عن الخطة الفعلية للمزارعين. الفول السوداني من أكثر المحاصيل ربحية في ظل الأسعار والإنتاجية السائدة في الموسم 2006/2007. حل النماذج الأساسية أعطت دالة هدف مربحة بينما في الواقع حق المزارعين الخسارة. العمالة الأسرية ورأس المال تمثل المعوقات الرئيسية للإنتاج الزراعي بمنطقة الدراسة. تطبيق الحزم التقنية الموصي بها وزيادة أسعار المنتجات الزراعية ونقصان تكاليف المدخلات أعطت دعم كبير للدخل المزرعى بمنطقة الدراسة.

من أجل تحقيق تنمية زراعية وامن غذائي بمنطقة الدراسة قدمت الدراسة بعض من التوصيات من ضمنها:

1. مد المزارعين بالمدخلات الزراعية من خلال (ا) توزيع المدخلات خاصة البذور من خلال السداد (عينا) بعد الحصاد و(ب) إدخال المدخلات المعمرة مثل طلمبات الرش والأدوات اليدوية عن طريق الإيجار.
2. دعم الإرشاد الزراعي ليصبح ذات فعالية وكفاءة في تبني التقنية الموصى بها.
3. إيجاد مصادر تمويل في المناطق الريفية وتسهيل عملية الائتمان الزراعي.
4. تشجيع التدخل الحكومي لتركيز أسعار الغلات المزرعية.
