

Acknowledgments

It gives me a great pleasure to express my sincere gratitude and deep appreciation to Dr. Yousef Guarano , Consultant Radiologist at King Abdulaziz University Hospital, for his continuous encouragement and supervision throughout the completion of this work.

I'm also deeply grateful to Dr. Syed Amir Gilani, Consultant Radiologist, Director of Afro-Asian Institute of Medical Science, Lahore – Pakistan, for his constant advice and supervision during this study

I am also deeply grateful to Ishbeelia Health Institute management for their encouragement.

Ibrahim Ahmed Ibrahim Ghanim

Abstract

Liver pathologists, have long noted findings of fatty changes, within the liver for many years, with increasing studies it was clear that there was an important group of conditions, unrelated to alcohol abuse, this condition produced similar histologic changes, termed by (N.A.SH) for non alcoholic steato hepatitis.

Today it is recognized that NASH forms one end of the spectrum of diseases causing fatty changes within the liver only 15-20 % of patient with NASH may progress to cirrhosis over one to two decades.

Fatty liver associated with the use of alcohol may occur with as little as 10 – 20 of alcohol ingested for week.

الملخص بالعربي

ركزت في هذه الدراسة على المرضى الذين يصابون بتشحم الكبد وهم عادة الذين لا يتناولون الخمر وقد يصيبهم تشحم وتليف الكبد وقد وجد علماء أمراض الكبد في الدراسات التي أجريت على بعض المرضى عبر السنين. وأثبتت الدراسات التي أجريت على بعض المرضى المصابين بتشحم الكبد وتليف الكبد من 10 – 20 % عبر عقد أو عقدين . وقد يرتبط إلتهاب الكبد مع تشحم الكبد وقد يصيب هذا المرض الذين يتناولون الكحول وغيرهم .

Dedication

This work is dedicated to my parents for their constant love, interest insights and purity of soul.

My gratitude goes to Dr.Yousef Guarano upon his comments, his many excellent suggestions and for helping me on conducting this study.

Also, I express my deep appreciation to Professor Dr.Syed Amir Gilani who was both directly and indirectly behind some modifications and extensions in this research.

In conclusion, I would like to express my sincere gratitude and deep appreciation to the King Abdul-Aziz University Hospital , management and staff, for their time and effort and who, during the past years, allow me to use their assets and facilities for testing , researching and research purposes.

I owe a particular debt of gratitude to my colleagues who have helped so much at every stage.

My final thanks and gratitude must be registered again and again to my wife for her unremitting help, encouragement and enduring patience. She gave me the peace of mind to enable me to really focus on this research. To Her I dedicate this work, as she was behind every word in it.
