Report submitted in partial fulfillment of the requirement for the degree of

**M.Sc**

**In**

**TELECOMMUNICATION ENGINEERING**

**By:**

**Adel Ali Abbass Ali**

Under the Supervision of

**Dr. Abd Alrasol Jabar Alzubaidy**

**February 2014**

**This work is dedicated to:**

My Parents,

Brothers,

Sisters,

Relatives,

Friends,

And colleagues.

**Who are looking forward**

**To see this work in light**

## **ACKNOWLEDGEMENT**

Firstly, all praise and my great thanks to my Glory God, ALLAH, for everything in my life, and for giving me the power and assisting me to complete this work.

I am profoundly grateful to **Dr.Abd Alrasol Jabar Alzubaidy**, (my supervisor) whose detailed criticisms of earlier drafts, valuable suggestions and wise counsel, have proved most invaluable to me. It has been a most rewarding learning experience to work under his guidance.

I thank all individuals who sacrificed their time to speak to me during the work. I wish to acknowledge with great appreciation all the encouragement from my friends; your advice were soul searching.

## **ABSTRACT**

With rapid development of communication industry, the kinds of communication service vary, according to the increasing use of radio waves, the intelligent and effective radio monitoring system needs to be developed, which is replaced for previous radio monitoring system. Next-Generation Intelligent Radio Monitoring System based on ITU-R, Rule of wireless facilities, and Radio Waves Act is used, and which can accurately and effectively function as effective radio monitoring system through spectrum analysis of channel power, frequency deviation, offset, and an occupied frequency bandwidth, about the analog and digital signal in On-Air of V/UHF bandwidth. In this paper, we proposes method of radio measurement and radio management through the radio quality measurement, unwanted electromagnetic signals(spurious, harmonic) measurement, high-speed spectrum measurement, frequency usage efficiency investigation, illegal radio exploration.

The objective of this project was to design a system to allow monitoring for electro morganatic waves or radio waves remotely via computer without the presence of man and to reduce the time factor.

There are two key components to the project design,

1-Remote unit

This unit consists of computer is present in the remote place.

2-Local unit

This contains of computer and a Local Control Section, Local Control Section consists of a DTMF Receiver (DTMF decoder), BASIC Stamp 2-IC, ULN2003 Darlington Driver and the radio waves

The remote unit (computer) was detected successfully the illegal random waves.

## مستخلص

في ظل التقدم و التطور السريع في صناعة الإتصالات و التقنيات الحديثه يتغير تبعاً لذلك نوع الخدمة التي تقدم المراقبة الأفضل لهذا التطور. وذلك نسبة لزيادة استخدام الموجات الراديوية. عليه يجب تحسين وتطوير نظام المراقبة لهذه الموجات بنظام أكثر حساسية ودقة من النظم السابقة. مع الأخذ بالاعتبار القواعد و اللوائح التلقى عليها من قبل النظام العالمي (ITU-R). مما يسمح لنا بمراقبة و متابعة كيفية عمل الأطيف الموجية مما يضمن حفظ حقوق مستخدميها.

الهدف من هذا المشروع كان تصميم نظام يقوم بالتحكم في الأجهزة الإلكترونية عن بعد وذلك بتشغيلها او إيقافها من خلال إستخدام النظام الخلوي نظام (GSM) .

يتكون هذا النظام من جزئين أساسين وهما

1.وحدة التحكم عن بعد (Remote unit)

هذه الوحدة تتكون من جهاز كمبيوتر

2.الوحدة المحلية ( Local unit )

هذه الوحدة تتكون من جهاز كمبيوتر ووحدة التحكم المحلية والتي تحتوي (DTMF ULN2003 Darlington Driver), (BASIC Stamp 2-IC), (Receiver المراد مراقبتها).

بعد التشغيل تم عن طريق وحدة التحكم كشف الموجات الغير قانونية التي لم يتم ترخيصها من قبل الهيئة القومية للاتصالات.
