

DEDICATION

To my parents, Brothers, and Sister for their constructive support and for being a source of encouragement and moral support.

To my Wife Ayat Omer Wageealla for her understanding, support, and encouragement during the period of this study.

Special love to my Son Mohammed.

ACKNOWLEDGEMENTS

I thank Allah Almighty for giving me the health to accomplish this work. It is a pleasure to thank the many people who made this thesis possible. I would like to express my sincere thanks and appreciation to my supervisor Associate Professor Dr. Mohammed Elmubark Osman for his helpful supervision, suggestion, encouragement, sound advice, good company, good ideas and support during the study.

Acknowledge to my co-supervisor Dr. Malik Abdella Abdelrahman for his suggestion and encouragement.

I also extend my heartfelt respect and deepest love to my friends and colleges for their support and encouragement throughout my studies.

Abstract

Fourty gum samples from *A.nilotrca* var. *nilotica* and *A.seyal* var. *seyal* represented by eight composite samples were collected from eight locations within the sudan gum belt with different soil types. The locations are Eldamazien, Eldinder ,Sinnar and Elgazira. Which represented the clay soil areas where as Alnihud ,Alobied, Abuzabad and Aburay represented the sandy soil areas of the belt .

Characterization studies, which are partly used for authentication of samples and resources, include the determination of moisture, ash, pH, nitrogen and protein content . Average moisture, ash, pH, nitrogen and protein content of *A.nilotica* var. *nilotica* were found to be 10.87%, 1.86%, 5.1, 0.023% and 0.151% respectively. For *A.seyal* var. *seyal* they were found to be 11.3%, 2.82%, 3.4, 0.133%, and 0.88%. Intrinsic viscosities, specific rotation, acid equivalent weight and total uronic acid of *A.nilotica* var. *nilotica* were found to be $10.1 \text{ cm}^3 \text{ g}^{-1}$, +92.6 ,1866.76 and 10.42 % respectively . While for *A.seyal* var.*seyal* they were found to be $12.12 \text{ cm}^3 \text{ g}^{-1}$, +55.25, 1449.93 and 13.38% respectively. Cationic composition studies show that potassium has the highest value followed by calcium, magnesium, sodium, lead, iron and zinc. Sugar composition shows average values of galactose content of *A.nilotica* var. *nilotica* and *A.seyal* var. *seyal* were found to be 16.34% and 38.06% respectively ,and arabinose content were found to be 45.90% and 42.33% respectively. While rhamnose was found to be 10.33% and 3.67% respectively.

The number average molecular weight value was found to be 2.10×10^5 for composite samples of *A.nilotica* var. *nilotica*. For composite samples of *A.seyal* var. *seyal* was found to be 2.97×10^5 .

Thermodynamic studies involved the estimation the partial specific volume of gum, partial specific volume of the solvent and the volume fraction. For composite samples of *A.nilotica* var. *nilotica* average was found to be $0.642 \text{ cm}^3 \text{ g}^{-1}$, $0.998 \text{ cm}^3 \text{ g}^{-1}$, 0.39024, and 0.61584 respectively. While average for composite samples of *A.seyal* var. *seyal* were found to be $0.647 \text{ cm}^3 \text{ g}^{-1}$, $0.998 \text{ cm}^3 \text{ g}^{-1}$, 0.3931, and 0.6065 respectively.

Chemical potential range have been calculated from osmotic measurement for different concentrations and was found to be -1.610715×10^{-3} to -2.13658×10^{-3} joule g^{-1} on average for composite samples of *A.nilotica var.nilotica*. For composite samples of *A.seyal var.seyal* the average it was found to be -1.17945×10^{-3} to -1.57519×10^{-3} joule g^{-1} .

Second virial coefficient (A_2) average for composite samples of *A.nilotica var.nilotica* were found to be 1.11×10^{-3} . Where as for composite samples of *A.seyal var.seyal* was found to be 3.51×10^{-3} .

Free energy of mixing range of composite samples of *A.nilotica var. nilotica* average was found to be $(-1.33470 \times 10^{-3}$ to $-3.40428 \times 10^{-3})$. For composite samples of *A.seyal var.seyal* average was found to be $(-2.112877 \times 10^{-3}$ to $-5.966130 \times 10^{-3})$.

المخلص

جمعت أربعون عينة من صمغ السنط صنف السنط و صمغ الطلح صنف الطلح تمثل ثمانية عينات خليط من ثمانية مواقع داخل حزام الصمغ العربي في السودان ، و من أنواع مختلفة التربة و المواقع هي النيل الأزرق، الدندر ، سنار و الجزيرة و التي تمثل مناطق التربة الطينية في حين أن مناطق النهود، الأبيض، أبوزيد و أبوراي تمثل مناطق التربة الرملية في الحزام .

أجريت الدراسة التوصيفية للتثبت من موثوقية العينات ، و قد إشتملت الدراسة على تحديد محتوى الرطوبة و الرماد و الأس الهيدروجيني و النتروجين و البروتين و قد وجد متوسط محتوى الرطوبة و الرماد و الأس الهيدروجيني و النتروجين و البروتين لصمغ السنط ١٠.٨% ، ١.٨٦% ، ٥.١ ، ٠.٢٣% و ٠.١٥١% على الترتيب . أما لصمغ الطلحة فقد وجدت النتائج ١١.٣% ، ٢.٨٢% ، ٣.٤ ، ٠.١٣٣% و ٠.٨٨% . و كانت نتائج اللزوجة الضمنية و الدوران النوعي و الوزن المكافئ و حامض الجلكتورنيك لصمغ السنط صنف السنط $10.1\text{cm}^3\text{g}^{-1}$ ، +٩٢.٦ ، ١٨٦٦.٧٦ و ١٠.٤٢% على الترتيب . بينما لصمغ الطلحة صنف الطلحة $12.12\text{cm}^3\text{g}^{-1}$ ، +٥٥.٢٥ ، ١٤٤٩.٩٣ و ١٣.٣٨% .

أظهرت دراسة محتوى بعد العناصر الفلزية وجد أن عنصر البوتاسيوم سجل أعلى قيمة يليه الكالسيوم ثم الماغنسيوم ثم الصوديوم ثم الرصاص ثم الحديد ثم الزنك . تم تقدير محتوى السكريات و أظهرت النتائج أن متوسط محتوى سكر الجلاكتوز لصمغ السنط صنف السنط و الطلحة صنف الطلحة ١٦.٣٤% و ٣٨.٠٦% على الترتيب ، و لسكر الأربينوز ٤٥.٩٠% و ٤٢.٣٣% على الترتيب بينما لسكر الرامانوز ١٠.٣٣% و ٣.٦٧% على الترتيب .

تم قياس Mn و كان متوسط القيم $2.10 \times 10^{\circ}$ لخليط عينات صمغ السنط صنف السنط . بينما لخليط عينات من صمغ الطلحة صنف الطلحة $2.97 \times 10^{\circ}$ على الترتيب .

في الدارسة الثيرموديناميكية تم إيجاد الحجم النوعي للجزيئي للصمغ و الحجم النوعي الجزيئي للمزيب و الكسر الحجمي و كانت النتائج لخليط عينات صمغ السنط صنف السنط $0.642\text{cm}^3\text{g}^{-1}$ ، $0.998\text{cm}^3\text{g}^{-1}$ ، 0.39024 ، و 0.61084 على الترتيب . بينما لخليط عينات صمغ الطلحة صنف الطلحة و جدت $0.647\text{cm}^3\text{g}^{-1}$ ، 0.998cm^3 ، 0.3931 ، و 0.6065 على الترتيب .

تم إيجاد الجهد الكيميائي من قياسات الضغط الإسموزي لتراكيز مختلفة وقد وجد المتوسط كما يلي : joule g^{-1} (-2.13658×10^{-3} إلى -1.610715×10^{-3}) لخليط عينات صمغ السنط صنف السنط . أما لخليط عينات صمغ الطلحة صنف الطلحة وجد المتوسط joule g^{-1} (-1.575519×10^{-3} إلى -1.17945×10^{-3}) على الترتيب .

تم حساب متوسط معامل الحد الثاني من العلاقة لخليط عينات صمغ السنط صنف السنط وقد وجد 1.11×10^{-3} بينما لخليط عينات صمغ الطلحة صنف الطلحة 3.51×10^{-3} على الترتيب .

طاقة جيبس الحرة لخليط عينات صمغ السنط صنف السنط وجد المتوسط joule g^{-1} (1.33470×10^{-3} الى 10^{-3})
بينما لخليط عينات صمغ الطلحة صنف الطلحة وجد المتوسط joule g^{-1} (2.112877×10^{-3} الى 10^{-3})
 10^{-3} (- 0.96613) على الترتيب .

CHAPTER ONE: GENERAL INTRODUCTION	1
CHAPTER TWO: LITERATURE REVIEW	3
2.1 Definition of <i>Acacia</i> gums	3
2.2 Geographical location of the gum belt	4
2.3 <i>Acacia</i> distribution	5
2.4 Gum sources	6
2.5 <i>Acacia Senegal</i> and <i>Acacia seyal</i>	7
2.5.1 Classification of <i>Acacia seyal</i> tree	8
2.5.2 Description	8
2.6 Physicochemical properties of gum	9
2.6.1 Moisture content	9
2.6.2 Ash content	13
2.6.3 pH value	13
2.6.4 Specific optical rotation	14
2.6.5 Viscosity	15
2.6.6 Nitrogen and protein content	16
2.6.7 Acid equivalent weight and uronic acid	18
2.6.8 Sugar composition	19
2.6.9 Cationic composition	20
2.6.10 Molecular weight of <i>A. senegal</i> , <i>A. seyal</i> and <i>A. nilotica</i>	20
2.7 <i>Acacia nilotica</i> var. <i>nilotica</i> Tree (Sunt)	24
2.7.1 Botanical classification of <i>Acacia nilotica</i> tree	24
2.7.2 Description of <i>Acacia nilotica</i> var. <i>nilotica</i> tree	25
2.7.3 Distribution of <i>Acacia nilotica</i> var. <i>nilotica</i> tree	25
2.7.4 Phytochemical constituents of <i>Acacia nilotica</i> tree	26
2.7.5 Chemical properties of <i>Acacia nilotica</i> gum	27
2.7.6 Uses of <i>Acacia nilotica</i> tree	31

2.8 Gum <i>Acacia</i> processing	33
2.8.1 Kibbled or granular gum	33
2.8.2 Mechanical gum powder	33
2.8.3 Spray dried gum	33
2.8.4 Specifications for gum	34
2.9 Properties and application of gums	35
2.9.1 Food uses	35
2.9.2 Non-food uses	36
2.9.3 Environmental issues	37
2.10 Pre and post-harvest practices of gum	37
2.10.1 Seed Germination	37
2.10.2 Traditional agroforestry or bush fallow system	38
2.10.3 Gum tapping and collection	39
2.10.3.1 Farm stage	39
2.10.3.2 Farmers ,middle trader, and big trader stage	41
2.10.3.3 Cleaning, sorting and grading	42
2.10.3.4 The exporting process	42
2.10.3.5 packing and exporting stage	43
2.11 Factors affecting gum production and supply	43
2.12 Structural features of gum	45
2.12.1 Chemical constituent of <i>Acacia</i> gum	45
2.12.2 Molecular structure of gum	45
2.13 Factors affecting physiochemical and functional properties of gum	52
2.14 Thermodynamic properties of <i>Acacia gums</i> solutions	55
2.14.1 Introduction	55
2. 14.2 Weight fraction (ω)	55
2. 14.3 The molar fraction (n)	56
2. 14.4 Volume fraction (Φ)	56
2. 14.5 Density of solid gum	56
2. 14.6 Partial molar (specific) volume (\bar{V})	56
2. 14.7 Chemical potential (μ)	58
2. 14.8 Ideal and non-ideal solutions	59
2. 14.9 Osmotic pressure (π)	59
5. 14.10 free energy of mixing of polymer with a solvent	63
CHAPTER THREE: MATERIALS AND METHODS	66
3.1 Introduction	66
3.2 Material and methods	66
3.2.1 Gum samples	66

3.2.2 Preparation of the gum samples	66
3.2.3 Methods	66
3.2.4 Determination of moisture content	68
3.2.5 Determination of ash content	68
3.2.6 pH measurement	68
3.2.7 Determination of specific optical rotation $[\alpha]_D^T$	68
3.2.8 Determination of intrinsic viscosity	69
3.2.8.1 Theoretical consideration	69
3.2.8.1.1 Huggins equation	71
3.2.8.1.2 Salt tolerance (S) and relative stiffness parameter (B)	72
3.2.8.2 Method	73
3.2.9 Nitrogen and protein Content	74
3.2.9.1 Method	74
3.2.10 Determination of acid equivalent weight and uronic acid	75
3.2.11 Determination of cationic composition	76
3.2.11.1 Method	76
3.2.12 Determination of sugar composition	76
3.2.12.1 Sample preparation	76
3.2.12.2 Method	77
3.2.13 Determination of number average molecular weight	77
3.2.14 Partial specific volume of solvent	79
3.2.15 Partial specific volume of gum	79
3.2.16 Density of solid gums	80
3.2.17 Osmotic pressure	80
3.2.17.1 Method	80
CHAPTER FOUR: RESULTS AND DISCUSSIONS	81
4.1 Physiochemical properties	81
4.1.1 Moisture content	81
4.1.2 Ash content	81
4.1.3 pH value	82
4.1.4 Specific optical rotation	82
4.1.5 Viscosity	83
4.1.6 Nitrogen and protein content	85
4.1.7 Acid equivalent weight and uronic acid	85
4.1.8 Cationic composition	86
4.1.9 Sugar composition	87
4.2 Thermodynamic properties	89
4.2.1 Partial specific volume of the solvent and solute	89
4.2.2 Volume fractions of water ϕ_1 and gums ϕ_2	94

4.2.3 The second virial coefficient (A_2)	97
4.2.4 Number average molecular weight	97
4.2.5 Chemical Potential	98
4.2.6 Free energy of mixing	108
4.3 Conclusion and Suggestions For Further Work	112
4.3.1 Conclusions	112
4.3.2 Suggestions for further work	114
