

## **ABSTRACT**

Cephalosprins consist of a fused  $\beta$ -Lactam dihydrothiazine two ring system known as 7-amionocephalosporanic acid (ACA).The quantitative analysis of these compounds gives rise to many problems , due to the chemical instability of  $\beta$ -Lactam neucleus .Quantitative estimations of  $\beta$ -Lactam antibiotics have been based on measurments of colour reaction of their degradation products or formation of their derivatives, most of these quantitative estimations are not precise and they require expensive instruments, the objective of this study is to carry out these estimations with accurate conventionl and locally available instrumentalte techniques.

Cephalosporins are organic acids, but with rather strong carboxylic group due to adjacent electronegative group ,with pK 1.7-2.6; therefore, they can be quantitatively determined ,titrimetrically ,conductometrically and potentiometrically in aqueous solutions .

Two cephalosporins antibiotics in their pharmaceutical products, cephalexin and amoxicillin capsules were used in this study, Cephalexin samples are products of Amipharma, Changahi, Elie and Wafra pharmaceutical companies in addition to cephalexin monohydrate used as a standard .Amoxicillin samples are products of Amipharma ,Changahi ,G.M, Wafra pharmaceutical companies in addition to amoxicillin tri hydrae used as astandard.

In this study, aqueous sample solutions were conventionally titrated (directly and indirectly) and, potentiometrically, with sodium hydroxide, but, conductometrically with both sodium and ammonium hydroxide. Spectrophotometric and HPLC methods were also applied.

Conductometric titration methods show one neutralizatin point for cephalexin and two neutralization points for amoxicillin. These two points indicate diprotic behavior of amoxicillin. due to the presence of phenolic ring in

its structure which reacts with excess added base. It also forms intermolecular hydrogen bonding ,that facilitates deprotonating of the OH group of the phenolic ring to neutralize further the base to form the second point . For the same reason the potentiometric titration curves show two separate neutralization points for amoxicillin.

The statistical analyses of the results obtained were carried out excluding that of the back titration method which gave very poor results due to the degradation of the antibiotics in alkaline medium.

A significant difference at level ( $P < 0.001$ ) was calculated for both cephalexin and amoxicillin results by direct titration, conductometric, potentiometric, spectrophotometric and HPLC methods.

A significant difference at level ( $P < 0.001$ ) was calculated for cephalexin results by direct titration , conductometric and potentiometric methods .

No significant difference at level ( $P > 0.05$ ) was calculated for results by direct titration, conductometric and potentiometric methods

Statistically direct titration, conductometric, potentiometric, spectrophotometric and HPLC methods, show symmetrical mean results.

The means results of direct titration, conductometric and potentiometric methods, show acceptable results as that of high performance liquid chromatography( HPLC)method.

## الخلاصة

السفالسبورينات تحتوى على نظام حلقتين بيتا-لاكتام ديهيدروثيازين مضغوطة ، تعرف بحامض ٧-أمينو سفالسبورين. التحليل الكمى لهذه المركبات يظهر عدة مشاكل بسبب عدم الاستقرار الكيميائى لنواة البيتا-لاكتامالتقدير الكمى للمضادات الحيوية التى تحتوى على البيتا-لاكتام تعتمد على لون التفاعل الناتج من التكسير الكيميائى او المشقات الناتجة. معظم هذه التقديرات الكمية غير دقيقة وتنطلب اجهزة آلية غالبة الثمن ، لذلك كان البحث عن طرق تعطى نتائج جيدة وتنطلب اجهزة متوفرة ورخيصة الثمن كان هو هدف هذا البحث . السفالوسبيورينات تعتبر احماض عضوية لها مجموعة كاربووكسيلية قوية نوعا ما و لها قيمة  $K_p$  تتراوح بين ٦.١-٦.٦ لذلك يمكن ان تقدر كميا باطرق التسخينية والموصالية والجهادية فى المحاليل المائية. لذلك اختير اثنين من مضادات السفالسبورين الحيوية على هيئة نواتج صيدلانية (كبسولات السفالكسين وكبسولات الاموكسيسلين) لهذه الدراسة.

عينات السفالكسين ناتج شركات اميفارما، شنغهاي، إيلى ووفره، بالإضافة الى سفالكسين مونوهيدريد. عينات الاموكسيسلين ناتج شركات اميفارما، شنغهاي ، G.M ووفره بالإضافة الى اموكسيسلين ترايهيدريد. فى هذه الدراسة تم تحليل محاليل العينات المائية بالتسخين التقليدى المباشر والرجعى، والمجهادى مع محلول هايدروكسيد الصوديوم، والموصالية مع كل محلول هايدروكسيد الصوديوم والأمونيوم. بالإضافة إلى طرق المضوانية الطيفية والクロوموتغرافيا السائلة عالية الأداء.

أوضحت الطرق الموصالية نقطة تعادل واحدة بالنسبة للسفالكسين ونقطتى تعادل مع الاموكسيسلين وهذا يوضح خاصية ثنائية البرتون للاموكسيسلين وذلك لوجود حلقة الفينول فى بنيته ، حلقة الفينول تتفاعل مع القاعدة الزائدة وكذلك تحدث رابطة هيدروجينية جزئية تؤدى الى سرعة ازالة الهيدروجين من مجموعة الهيدروكسيد فى الفينول لكي تتعادل مع القاعدة، لنفس السبب فان الطريقة المجهادية اظهرت نقطتى تعادل بالنسبة للاموكسيسلين.

التحليل الإحصائى لنتائج تلك التجارب ماعدا تجربة التسخين الرجعى نسبة لان نتائجه كانت ضعيفة جدا وذلك نتيجة لنقاك تلك المضادات الحيوية فى الوسط القاعدى. أظهرت النتائج فروقاً معنوية للسفالكسين والاموكسيسلين باستخدام طرق التسخين المباشر و الموصالية و المجهادية و المضوانية الطيفية والクロوموتغرافيا السائلة عالية الأداء فى المستوى ( $P < 0.001$ )

اظهرت النتائج فروقاً معنوية فى المستوى ( $P < 0.001$ ) للسفالكسين باستخدام طرق التسخين المباشر و الموصالية و المجهادية.

لاتوجد فروق معنوية في المستوى ( $P > 0.05$ ) لنتائج الاموكسيسيلين باستخدام طرق التسخين المباشرة والموصلىة والمجهادية.

احصائياً فإن الطرق الآتية للتسخين المباشرة والموصلىة والمجهادية والكروموغرافيا السائلة فائقة الأداء لها متوسطات متماثلة، وعموماً فإن الطرق الآتية للتسخين المباشرة والموصلىة والمجهادية أعطت نتائج مقبولة مقارنة مع طريقة الكروموغرافيا السائلة عالية الأداء.

## **ACKNOWLEDGEMENTS**

Thanks to God of giving me a great power and patience to conduct this study.

I wish to express my sincere thanks for the University of sinnar for giving me the chance of scholarship and support. I am very much indebted to my supervisor Dr. Mohamed Almukhtar Abdel Azeiz for his keen interest, supervision, continuous guidance and encouragement throughout this study and my co-supervisor Prof. Ahamed Elsadig for his generous support and guidance.

Thanks are extended to the staff members, technicians and labors of the department of chemistry for their great help and support to carry this work. Thanks are extended to the instrument's lab staff, Babeker, Nadia and Safa for their great help and support.

Thanks are extended to Dr .Awad Elkareim Altegani, Dr. Abdel Rahman Mohamed Ebadawi , Dr. Ibraheim Ali Eshag and Taha Abdelgayoum University of Sinnar for their generous help and assistances.

Thanks are extended to secretaries of Prof. Qunther Schlee. Department 1, Max planch Institute for Social Anthropology, Germany. For their great help in providing me with some important papers.

Finally the completion of this work might have been impossible without perservance , support and patience of my family, therefore I specially thank my wife , my daughters Amna and Islam , and my sons Mohamed and Omer .

| 3.14 | Potentiometric titration of 50ml Elie cephalexin capsules with 0.2814M sodium hydroxide -2      | 79  |
| 3.15 | Potentiometric titration of 50ml Amipharma cephalexin capsules with 0.2814M sodium hydroxide -1 | 82  |
| 3.16 | Potentiometric titration of 50ml Amipharma cephalexin capsules with 0.2814M sodium hydroxide -2 | 83  |
| 3.17 | Potentiometric titration of 50ml Shangahi cephalexin capsules with 0.2814M sodium hydroxide -1  | 86  |
| 3.18 | Potentiometric titration of 50ml Shangahi cephalexin capsules with 0.2814M sodium hydroxide -2  | 87  |
| 3.19 | Potentiometric titration of 50ml Wafra cephalexin capsules with 0.284M sodium hydroxide -1      | 90  |
| 3.20 | Potentiometric titration of 50ml Wafra cephalexin capsules with 0.284M sodium hydroxide -2      | 91  |
| 3.21 | Standard cephalexin mono hydrate calibration curve of spectrophotometric method                 | 94  |
| 3.22 | Standard cephalexin monohydrate calibration curve of chromatographic method                     | 107 |
| 3.23 | Conductometric titration of 50ml amoxicillin trihydrate with 0.09224M sodium hydroxide          | 132 |
| 3.24 | Conductometric titration of 50ml Amipharma amoxicillin capsules with 0.09211M sodium hydroxide  | 135 |
| 3.25 | Conductometric titration of 50ml Changahi amoxicillin capsules                                  | 138 |

|      |   |     |
|------|---|-----|
|      | with 0.0917M sodium hydroxide   |     |
| 3.26 | Conductometric titration of 50ml G.M amoxicillin capsules with 0.0917M sodium hydroxide                     | 141 |
| 3.27 | Conductometric titration of 50ml Wafra amoxicillin capsules with 0.0745M sodium hydroxide                   | 144 |
| 3.28 | Conductometric titration of 50ml amoxicillin trihydrate with 0.0794M ammonium hydroxide                     | 149 |
| 3.29 | Conductometric titration of 50ml Amipharma amoxicillin capsules with 0.07883M ammonium hydroxide            | 152 |
| 3.30 | Conductometric titration of 50ml Changahi amoxicillin capsules with 0.0723M ammonium hydroxide              | 155 |
| 3.31 | Conductometric determination of 50ml G.M amoxicillin capsules with 0.07886M ammonium hydroxide              | 158 |
| 3.32 | Conductometric titration of 50ml Wafra amoxicillin capsules with 0.1202M ammonium hydroxide                 | 161 |
| 3.33 | Potentiometric titration of 50ml amoxicillin trihydrate with 0.09244M sodium hydroxide -1                   | 166 |
| 3.34 | Potentiometric titration of 50ml amoxicillin trihydrate with 0.09244M sodium hydroxide 2                    | 167 |
| 3.35 | Potentiometric titration of 50ml amipharma amoxicillin capsules with 0.09211M sodium hydroxide -1           | 170 |
| 3.36 | Potentiometric titration of 50ml amipharma amoxicillin capsules trihydrate with 0.09211M sodium hydroxide-2 | 171 |
| 3.37 | Potentiometric titration of 50ml Changahi amoxicillin capsules with 0.0917M sodium hydroxide -1             | 174 |
| 3.38 | Potentiometric titration of 50ml Changahi amoxicillin capsules with 0.0917M sodium hydroxide -2             | 175 |
| 3.39 | Potentiometric titration of 50ml G.M amoxicillin with 0.0917M   | 178 |

|      |  |     |
|------|--|-----|
|      | sodium hydroxide-1   |     |
| 3.40 | Potentiometric titration of 50ml G.M amoxicillin 0.0917M with sodiumhydroxide-2              | 179 |
| 3.41 | Potentiometric titrationof 50ml Wafra amoxicillin capsules with 0.0745M sodium hydroxide -1  | 182 |
| 3.42 | Potentiometric titration of 50ml Wafra amoxicillin capsules with 0.0745M sodium hydroxide -2 | 183 |
| 3.43 | Standard amoxicillin tri hydrate calibration curve of spectrophotometric method              | 187 |
| 3.44 | Chromatographic standard amoxicillin curve of chromatographic method                         | 201 |
| 4.1  | Reactivity and degradation of penicillins and cephalexins in neutral and alkaline medium     | 221 |
| 4.2  | Reaction of amino acid with acid and base  | 221 |
| 4.3  | Ionic species of amoxicillin   | 222 |

## LIST OF CHROMATOGRAMS

| <b>Chromotogram plot</b> | <b>Title</b>                            | <b>Page</b> |
|--------------------------|---|-------------|
| 3.1                      | (R1.1) standard cephalexin monohydrate  | 98          |
| 3.2                      | (R1.2) standard cephalexin monohydrate  | 99          |
| 3.3                      | (R1.3) standard cephalexin monohydrate  | 100         |
| 3.4                      | (R2.1) standard cephalexin monohydrate  | 101         |
| 3.5                      | (R2.2) standard cephalexin monohydrate  | 102         |
| 3.6                      | (R2.3) standard cephalexin monohydrate  | 103         |
| 3.7                      | (R3.1) standard cephalexin monohydrate  | 104         |
| 3.8                      | (R3.2) standard cephalexin monohydrate  | 105         |
| 3.9                      | (R3.3) standard cephalexin monohydrate  | 106         |
| 3.10                     | (R1) Amipharma cephalexin capsules      | 108         |
| 3.11                     | (R2) Amipharma cephalexin capsules      | 109         |
| 3.12                     | (R3) Amipharma cephalexin capsules      | 110         |
| 3.13                     | (R1) Elie cephalexin capsule            | 111         |
| 3.14                     | (R2) Elie cephalexin capsules           | 112         |
| 3.15                     | (R3) Elie cephalexin capsules           | 113         |
| 3.16                     | (R1) Wafra cephalexin capsules          | 114         |
| 3.17                     | (R2) Wafra cephalexin capsules          | 115         |
| 3.18                     | (R3) Wafra cephalexin capsules          | 116         |
| 3.19                     | (R1.1) Standard Amoxicillin Tri hydrate | 192         |
| 3.20                     | (R1.2) Standard Amoxicillin Tri hydrate | 193         |
| 3.21                     | (R1.3) Standard Amoxicillin Tri hydrate | 194         |
| 3.22                     | (R2.1) Standard Amoxicillin Tri hydrate | 195         |
| 3.23                     | (R2.2) Standard Amoxicillin Tri hydrate | 196         |
| 3.24                     | (R2.3) Standard Amoxicillin Tri hydrate | 197         |
| 3.25                     | (R3.1) Standard Amoxicillin Tri hydrate | 198         |

|      |   |     |
