

3.1Elemental analysis by Inductively Coupled Plasma mass spectrometry (ICP):

Elemental analysis was conducted by inductively coupled plasma mass spectrometry (ICP). The concentrations of 15 metals Content (part per million - p.p.m) In 20 kidney stone samples (from 1 to 20). Result comparison with random samples of Tap water (21), black tea (22), and NaCl salt(23) and other 9 metals content (part per million - p.p.m) In samples 1,7,15,17, and 19, tabled below.

Table 3:1: Content of elements (ppm) in kidney stone samples, tap water, black tea, and table salt

samples	Gender	Age	Ba	Ca	Cr	Cu	Fe	K	Mg
Sample(1)	Female	4	0.0227	6402	0.0489	0.0587	0.3525	6.665	2.276
Sample (2)	Female	8	13.02	241000	0.056043	7.1514	0.027618	0.815553	0.65419
Sample (3)	Female	15	4.186	6401	2.006983	17.2626	0.36719	0.122407	N.D
