

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

قال تعالى :

(وَتَرَى الْجِبَالَ تَحْسِبُهَا جَامِدَةً وَهِيَ تَمُورُ مِنَ السَّحَابِ صُنْعَ اللَّهِ
الَّذِي أَتَقَنَ كُلَّ شَيْءٍ إِنَّهُ خَيْرٌ بِمَا تَفْعَلُونَ) سورة النمل [6]

صدق الله العظيم

DEDICATION

This thesis was dedicated to:

The sake of Allah, my Creator and my Master, My great teacher and messenger, Mohammed (May Allah bless and grant him), who taught us the purpose of life; my second magnificent home; My great parents, who never stop giving of themselves in countless ways, My beloved brothers and sisters; particularly my dearest brother, Mohammed, who stands by me in all situations when things look bleak, To all my family, the symbol of love and giving, My friends who encourage and support me, All the people in my life who touch my heart.

Acknowledgement

I would like to express my gratitude to my supervisor Doctor Amel Abdallah .A. Elfaki who has been always generous during all phases of the research, I highly appreciate the efforts expended ,for the useful comments, remarks and engagement through the learning process of this master thesis. Furthermore I would like to thank professor Mubarak Dirrar for introducing me to the basic concept of science and encouraged me to continuing my studying in physics.

Finally, I must express my very profound gratitude to my parents and to my [partners ,friends , supporters and advisors] for providing me with unfailing support and continuous encouragement throughout my years of study and through the process of researching and writing this thesis. This accomplishment would not have been possible without this thesis. This accomplishment would not have been possible without them. thank you.

Abstract

In this work the required instruments had set up and required material had prepared. In the first, powder of material gypsum and graphite was taken as grams and projecting light form a distance and change the grams with changing of the distance of the projecting light for many times and thus got results by assistant of photocell and multimeter to calculate change of the voltage with of grams of powder material and taken as composite of two materials (gypsum and graphite) then hereafter studies change of velocity to find different changed of light and properties like wavelength , absorption ,transmission and reflection on the bases of available results .

Results showed that the rate of absorption is greater than reflection rate and rate of transmission is the least one these gypsum-graphite composite improved the characteristics of each other with comparative the characteristics of gypsum and graphite as different. The coefficients are increased with increased the Mass of material.

ملخص البحث:

في هذا العمل اعدت الاجهزة المطلوبة بالإضافة للمواد المطلوبة للإجراء التجربة. اخذت جرامات من المادة المسحوقة من الجبص والجرافيت وتم تسليط الضوء من مسافة معينة على المادة وأخذت قراءة فرق الجهد باستخدام الخلية الضوئية. وكررت التجربة بأخذ الجهد في كل مرة مع تغير عدد الجرامات من المادة مع تغير مسافة تسليط الضوء باستخدام شعاع الليزر والضوء الابيض وكما اخذت عينة مركبة من مادتين (جبص وجرافيت) وتم الحصول على النتائج والحسابات لمعرفة التغيرات التي حدثت في السرعة والطول الموجي وشدة الضوء وكما تمت دراسة خصائص اخرى للضوء كالامتصاص والانكسار و النفاذية بناءً على النتائج والعلاقات الفيزيائية التي تربط هذه الكميات ووجدت النتائج العملية تتوافق مع القوانين من حيث النظري.
