

## الآية

بسم الله الرحمن الرحيم

قال تعالى:

اللَّهُ لَا إِلَهَ إِلَّا هُوَ الْحَيُّ الْقَيُّومُ لَا تَأْخُذُهُ سِنَّةٌ وَلَا نَوْمٌ لَهُ مَا فِي السَّمَاوَاتِ  
وَمَا فِي الْأَرْضِ مَنْ ذَا الَّذِي يَشْفَعُ عِنْدَهُ إِلَّا بِإِذْنِهِ يَعْلَمُ مَا بَيْنَ أَيْدِيهِمْ وَمَا  
خَلْفَهُمْ وَلَا يُحِيطُونَ بِشَيْءٍ مِّنْ عِلْمِهِ إِلَّا بِمَا شَاءَ وَسِعَ كُرْسِيُّهُ السَّمَاوَاتِ  
وَالْأَرْضَ وَلَا يَئُودُهُ حِفْظُهُمَا وَهُوَ الْعَلِيُّ الْعَظِيمُ

صدق الله العظيم

سوره البقرة الآية ( 255 )

**Dedication**

Overall I dedicate this work for my parent ,then my Family ,my Husband ,my friend and for everyone who teach me something through my educational Journey.

Special dedication to my college professors ,and my collage whom teach me and always they been supportive .

## **Acknowledgement**

I would like to start with thanking ALLAH for granting me the ability to complete this work. I would like to express my deepest thanks to Dr. Babiker Abdallwahab and also thanks Ultrasound department of Omderman Maternity Hospital by giving me chance to collect the research data.

**Abstract**

This is a descriptive cross sectional study which was done in Omderman Maternity Hospital and Omdurman friendship Hospital, carried out from August to December 2016.

Study aimed to detect Adnexal causes of pelvic pain in non pregnant women using B-mode ultrasound, there were 50 female patients scanned trans abdominal and trans vaginal use TOSHIBA Model SSA-370A. All these patients had pelvic pain, any female had age under fourteen and had normal pregnancy was excluded from this study. This study showed mean age between (26-35) years, and married more affected than non married, and also found PID most common causes of pelvic pain 21 out of cases (42%), followed by adnexal masses 18 of cases (36%), 7 of patient (14%) had adnexal cyst, 4 of patient (8%) had ectopic pregnancy. This research approved it is hypothesis that ultrasound was more accurate tool for detection of female pelvic pain.

We recommended further studies should be carried out in this field on many aspects such as increasing the number of patients, to show the relation between pelvic pain and infertility, comparing between the role of U/S scanning and other diagnostic tools, using a trans vaginal ultrasonographic approach and color Doppler ultrasonography.

## المستخلص

هذه الدراسة وصفية عملت في مستشفى الولادة امدرمان ومستشفى الصداقه الصيني بامدرمان،اجريت هذه الدراسة ما بين شهر اغسطس وديسمبر 2016.يهدف هذا البحث الي الكشف عن اسباب الام الحوض عند النساء غير الحوامل بواسطه الموجات الصوتيه نمط الكشف ب،حيث اخذنا 50حاله من النساء وتم الكشف عليهن مستخدمين مسبار الكشف عن طريق البطن ومسبار الكشف عن طريق المهبل باستخدام جهاز توشيبا موديل اس اس اي 370اي.كل هؤلاء النساء يعانين من الام الحوض،النساء اقل من 14سنه والحوامل حمل طبيعي قد تم استبعادهن من هذا البحث.وجدت الدراسه متوسط الاعمار اصابه بالام الحوض ما بين 26-35سنه والنساء المتزوجات اكثر اصابه من غير المتزوجات،كما وجدت الدراسه ان امراض الحوض الالتهابيه اكثر سببا لالام الحوضحيث21من الحالات بنسبه (42%) تليها الاورام 18 من الحالات بنسبه(36%) ثم تكيسات 7من الحالات بنسبه(14%)اقل حدوثا الحمل خارج الرحم 4من الحالات بنسبه(8%). اثبت هذا البحث من خلال نظرياته ان الموجات فوق الصوتيه اكثر اساليب الفحص دقه في الكشف عن اسباب الام الحوض عند النساء.نوصي بعمل دراسات اكثر في هذا المجال كزياده عدد المرضي لمعرفة العلاقه بين الام الحوض والعقم والمقارنه بين دور الموجات فوق الصوتيه واساليب الفحص الاخري باستخدام المنظار المهبلي والدوبلر.

## List of tables

Table	Page NO
4-1. Frequency distribution of age group	39
4-2. Frequency distribution of marital state	40
4-3. Frequency distribution of sign and symptoms	41
4-4-a Frequency distribution of ultrasound finding	42
4-4-b Frequency distribution of ultrasound finding according to finding for each patient	43
4-5 Frequency distribution of final diagnosis	45
4-6-a cross tabulation sign and symptoms and final diagnosed of patient	46
4-6-b chi –square test between sign and symptom and final diagnosis	48
4-7-a:cross tab age group and final diagnosed	49
4-7-b: chi –square test age group and final diagnosed	51
4-8-a:cross tab ultrasound finding and final diagnosed	
4-8-b: chi –square test between ultrasound finding and final diagnosed.	52
4-9correlation between age and final diagnosed	52

## List of figures

Figure	Page NO
2.1 Shows lateral view of internal female reproductive organs	8
2-2 shows anterior view of internal female reproductive organs	9
2-3 U/S image shows PID	16
2-4 U/S image shows complex solid and cystic mass with internal vascularity in tubo ovarian abscess	17
2-5 U/ S image shows extra uterine gestational sac with fetal part inside the sac.	18
2-6 U/S images show peripheral vascularity around acystic mass with homogeneous low level internal echo (endometrioma).	19
2-7 U/S images show an enlarged ovary with prominent peripheral located follicles with lack of parenchymal blood	21
2-8 U/S image shows multicystic and solid complex mass	22
2-9 show normal sonographic appearance of the ovary	30
4-1.shows distribution of age group of women with adnexal pelvic pain	39
4-2. Shows distribution of marital status of women with pelvic pain	40
4-3. Shows distribution of sign and symptoms	41
4-4-a. Show distribution of ultrasound finding in women with adnexal pain .	43
4-4-b:. Show distribution of ultrasound finding by cases.	45
4-5. Show distribution of final diagnosis for women with adnexal pain	46

## Abbreviations

<b>Abbreviation</b>	<b>Meaning</b>
UTI	Urinary Tract Infection
ESR	Erethrocyte sedimentation rate
HSG	Hysterosalpingo gram
PID	Pelvic Inflammatory Disease
SPSS	Statistical Package for the Social Sciences
CBC	Complete blood count
U/S	Ultrasound
CT	Computed tomography
MRI	Magnetic resonance image
