

آية

قَالَ تَعَالَى: ﴿ وَالشَّمْسُ تَجْرِي لِمُسْتَقَرٍّ لَهَا ذَلِكَ تَقْدِيرُ الْعَزِيزِ
الْعَلِيمِ ﴿٣٨﴾ وَالْقَمَرَ قَدَّرْنَاهُ مَنَازِلَ حَتَّىٰ عَادَ كَالْعُرْجُونِ الْقَدِيمِ ﴿٣٩﴾ لَا
الشَّمْسُ يَنْبَغِي لَهَا أَنْ تُدْرِكَ الْقَمَرَ وَلَا اللَّيْلُ سَابِقُ النَّهَارِ وَكُلٌّ فِي فَلَكٍ
يَسْبَحُونَ ﴿٤٠﴾ (سورة، يس)

DEDICATION

I dedicate this research to the spirit of my father, and brother, sisters and also dedicated to science students in various fields of knowledge.

ACKNOWLEDGMENT

First I would like to thank my supervisor Dr.Amal for her guidance, help and encouragement to make this work possible. Also my thanks go to the Uz: Ali Sulaiman for his help in the experimental work, and my colleague Fadl almola for supporting me during my work. Also I thank whoever has lent me a helping.

Lastly, I send a great thanks to my family for their support, especially to the greatest women in the world (my mother)

ABSTRACT

In this research the attenuation coefficient of X-ray to some selected elements based on atomic number were studied as a function of different thicknesses for Aluminum foils was studied and revealed exponential relation.

Also different materials for the same thickness was conducted which is revealed that the attenuation coefficient depend on the atomic number (z) beside the crystal structure of atom (fcc, sc, bcc).

مخلص البحث

في هذا البحث تم دراسة معامل التوهين للأشعة السينية لبعض العناصر المختارة بناءً على العدد الذري. كما تمت دراسة معامل التوهين كدالة في رقائق الألومنيوم مختلفة السماكات ووجدت العلاقة أسية. كما تمت أيضا دراسة معامل التوهين لعناصر مختلفة ذات سمك واحد ووجد أن معامل التوهين يعتمد على العدد الذري (Z) بجانب التركيب البلوري للذرة (مكعب مركز الوجه ، مكعب مركز الجسم، مكعب مركز القاعدة)
