Dedication

I dedicate this project to my family whom strongly stand with me in every step without surrender.

Acknowledgment

It is great pleasure to acknowledge the help of many individual whom their afford and advice strongly support this research.

first and for most we are indebted to my supervisor Assoc Prof **Dr. Rashid A. Saeed** deserve special mention for willingness to lend his experience, time and afford in revising all the research chapter.

I also appreciate Dr salah Edam for helpfully lending a hand whenever need.

This acknowledgment will be remiss if we fail to acknowledge Dr Ibtihal Hider co-ordinate of master degree.

Our acknowledge cannot be finish without showing my grateful and thanks to my colleague for their encouragement and aids

Abstract

Multiprotocol label switching is a technology use to forward traffic by using a label added to packet header, it's better than routing protocols which do not use network resources efficiently, DiffServ has ability to prioritize traffic depends on packet header information. MPLS and DiffServ are independent techniques, but they can work together to improve the performance of network.

The aim of thesis is to enhance the QOS for voice over IP packets to facing minimum delay and minimum loss, this achieve by prioritize voice packet in MPLS network.

Scenarios are designed by using a simulator called OPNET, three scenarios are simulated, first scenario is Multi-Protocol Label Switching, second is MPLS with Differentiated Services (DiffServ) with weight fair queuing, the third is MPLS-Differentiated Services FIFO queuing.

The study prove that MPLS-DiffServs WFQ is better than MPLS and MPLS-DiffServs FIFO in performance, bandwidth, minimum end to end delay, minimum loss, jitter and high throughput.

المستخلص

التبديل متعدد البروتوكولات باستخدام المؤشرات هي تقنية تستخدم لارسال البيانات باستخدام المؤشرات التي تضاف لعنوان الحزمة, هي افضل من بروتوكولات التوجيه التي لا تستخدم المصادر الشبكة بكفاءة. تميز الخدمة لديه الامكانية لإعطاء اولويه للبيانات اعتماداً علي معلومات عنوان الحزمة. التبديل متعدد البروتوكول باستخدام المؤشرات وتميز الخدمة تقنيتان مستغلتان عن بعضهما لكن يمكن ان يعملتا مع بعضهما لتحسين الاداء في الشبكة.

الهدف هو تحسن من جودة الخدمة لحزمة الصوت عبر بروتوكول الانترنت لكي تواجه اقل تاخير و اقل فقد, وذلك ينجز باعطاء اولويه لحزمة الصوت في شبكة تبديل متعدد البروتوكولات باستخدام المؤشرات.

صمنا النماذج باستخدام برنامج محاكاة يسمى الابونت. ثلاثة نماذج صممت, اول نموذج تبديل متعدد البروتوكولات باستخدام المؤشرات والثاني تبديل متعدد البروتوكولات باستخدام المؤشرات و تميز الخدمة ونوع صفوف الوزن العادل و الثالث هو باستخدام تبديل متعدد البروتوكولات باستخدام المؤشرات مع تميز الخدمة وصف الواصل اولاً يخدم اولاً .

اثبتت الدراسة ان تبديل متعدد البروتوكولات باستخدام المؤشرات مع تميز الخدمة و صفوف الوزن العادل افضل من تبديل متعدد البروتوكولات باستخدام المؤشرات و تبديل متعدد البروتوكولات باستخدام المؤشرات مع تميز الخدمة وصف الواصل اولاً يخدم اولاً من حيث الاداء, وافضل في عرض النطاق, اقل زمن تاخير في الحزم , اقل اختلاف في زمن التأخير , فقد في الحزم و اعلي انتاجية.
