Chapter 1	Introduction	1
1.1	Literature review	2
1.2	Aims of the study	5
1.3	Thesis Outlines	5
Chapter 2	Theoretical back ground	6
2.1	Lasers	6
2.2	Ikeda Scenario	6
2.3	Chaos	7
2.4	Chaotic time series in a system	9
2.4.1	Lyapunov exponent	9
2.4.2	Fourier transform	10
2.4.3	Attractor	11
2.4.3.1	Attractors types	12
2.4.4	Bifurcation Diagram	13
2.4.5	Shilnikov Homoclinic Chaos and Saddle-focus	13
2.4.6	Distribution of Inter-Spike Intervals (ISI)	14
2.5	Lasers and chaos	15
2.6	The synchronization of chaotic systems	15
2.6.1	Introduction	15
2.6.2	Types of synchronization	17
2.6.3	Synchronization of identical systems(CS)	18
2.6.4	Optical communication with synchronized chaotic lasers	21
2.7	Cross-Spectra and Coherence function	25
Chapter 3	Dynamical model theory	27
3.1	Introduction	27
3.2	Chaotic spiking scenarios in DL with AM optoelectronic feedback	27
3.3	Dynamical model of chaos generation	28
3.4	Amplitude modulation in Diode laser	35
3.4.1	Modulation	35
3.4.2	Modified rate equations in DL with amplitude modulation	35
3.5	Dynamical Model of unidirectional coupling oscillators	37
3.6	Dynamical model of bidirectional coupling oscillators	38
Chapter 4	Results and Discussion	40
4.1	Introduction	40
4.2	Effect of amplitude modulation on chaos dynamic	40

4.3	Effect of amplitude modulation in unidirectional coupling	48
4.4	Effect of amplitude modulation in bidirectional coupling	51
4.5	Dissections	56
4.6	Conclusion	57
4.7	Recommendation	58

List of Figures

2.1	The schematic of attractors type	12
2.2	The schematic of the logistic map bifurcation diagram	13
2.3	Homoclinic loop of a saddle-focus in the Rossler system.	13
2.4	Three research directions for engineering applications with chaotic lasers	25
3.1	Schematic diagram of directly modulated semiconductor lasers	37
3.2	Unidirectional coupling Sketch of two delayed laser.	37
3.3	Bidirectional Sketch of two coupling delayed laser.	39
4.1	Time series of dynamical model, attractor and Fourier transform when ($A=0.060$)	41
4.2	Time series of dynamical model, attractor and Fourier transform when ($A=0.075$)	42
4.3	Time series of dynamical model, attractor and Fourier transform when ($A=0.115$)	43
4.4	Time series of dynamical model, attractor and Fourier transform when($A=0.199$)	44
4.5	Time series of dynamical model, attractor and Fourier transform when ($A=0.656$)	40
4.6	Time series of dynamical model, attractor and Fourier transform when ($A=0.060, (\varepsilon =3 \times 10^{-5})$)	46
4.7	Bifurcation diagram for the model equations other parameters constant	47
4.8a	Coherence function of LD when ($a=0.4098, f=4$)	49
4.8b	Dynamical time series of two LD when ($a=0.4098, f=4$)	49
4.9a	Coherence function of LD when($a=0.4101$)	50
4.9b	Dynamical time series of two LD when ($a=0.4101$)	50
4.10a	Coherence function of LD when ($a=0.4012$).	51
4.10b	Dynamical time series of two LD when ($a=0.4012$).	51
4.11a	Coherence function of LD when ($a=1.50$).	52
4.11b	Dynamical time series of two coupled laser when ($a=1.50$).	52
4.12a	Coherence function of LD when ($a=1.56$)	53
4.12b	Dynamical time series of two coupled laser when ($a=1.56$)	53
4.13a	Coherence function of LD when ($a=1.55$)	54
4.13b	Dynamical time series of two coupled laser when ($a=1.55$)	54
