	Abstract	
	Abstract-in Arabic	
Chapter one		
1.1	Introduction	1
1.2	The problem	1
1.3	The aim	2
1.4	The methodology	2
1.5	Thesis layout	2
Chapter two		
Basic principles of non-destructive testing (NDT)		
2.1	Definition and importance of NDT	3
2.2	Types of NDT methods	3
2.2.1	Visual testing (VT)	4
2.2.2	Liquid penetrant testing	6
2.2.3	Magnetic particle testing (MT)	8
2.2.4	Eddy current testing (ET)	11
2.2.5	Radiographic testing method (RT)	14
2.2.6	Ultrasonic testing (UT)	16
2.2.7	Leak testing (LT)	18
2.2.8	New developments in NDT	
Chapter three		
The XRF principles		
3.1	definition of XRF	21
3.2	Basics of XRF	21
3.3	basic principles X-rays	22
3.3.1	Interaction of X-rays with matter	22
3.4	Absorption and enhancement effects	23
3.5	Rayleigh and Compton scatter	25
3.6	The XRF spectrometer	28
3.7	XRF analysis	29
3.8	Sample preparation	29
3.9	XRF measurements	29
Chapter four		
Material and methods		
4.1	Introduction	32
4.2	materials and method	32
4.3	Sample preparation	32

4.3.1	Liquids preparation	32
4.4	Results	32
4.5	Discussions	38
4.6	Conclusions	38

## List of figures

Figure 2.1	various optical aids used in visual inspection:	5
Figure. 2.2	Different stages of liquid penetrant testing	8
Figure. 2.3	Basic principle of magnetic particle testing	9
Figure. 2.4	Different magnetizations used in magnetic particle testing.	11
Figure. 2.5	(a)Generation of eddy currents in the test object. (b) Distortion of eddy currents due to defect.	12
Figure. 2.6	Types of probes used in eddy current testing (a) Internal Coil (b) Encircling Coil (c) Surface Probe.	14
Figure 2.7	Arrangement for radiographic testing method.	16
Figure. 2.8	Basic components of an ultrasonic flaw detection system.	18
Figure 3.1	Three main interactions of X-rays with matter	23
Figure 3.2	Absorption of incoming and fluorescent X-rays	24
Figure 3.3	Primary and secondary fluorescence	25
Figure. 3.4	Compton scatter	26
Figure 3.5	Compton and Rayleigh scatters	27
Figure 3.6	Compton and Rayleigh scatter for light and heavy elements	28
Figure 4.1	the elements which exist in tab water before subject to magnetization	34
Figure 4.2	the elements which exist in tab water after subject to magnetization	34
Figure 4.3	the elements which exist in miner water before subject to magnetization	35
Figure 4.4	the elements which exist in miner water after subject to magnetization	35
Figure .4.5	the elements which exist in Zamzam water before subject to magnetization	36
Figure 4.6	the elements which exist in Zamzam water after subject to magnetization	36
Figure 4.7	the elements which exist in river water before subject to magnetization	37
Figure 4.8	the elements which exist in river water after subject to magnetization	37

### List of tables
