

## **DEDICATION**

To.....

Soul of my father .....

My mother .....

My sister and brother .....

My family .....

I kindly dedicate this work.

**Dalia Bushra Ahmed**

## **ACKNOWLEDGEMENT**

Firstly, great thanks to Allah almighty who made all things possible and gave me power to do this work.

I also kindly thank Dr. Muna Ahmed Mohammed who helped and support me to complete this work.

In particular I thank Dr. Ahmed Abukonna. Dean of , faculty of radiological sciences and medical imaging, Sudan university of science and technology for his help and expert guidance.

My gratitude to my colleagues in Sudan university of science and technology, faculty of radiological sciences and medical imaging.

Also thank all women who participated voluntarily in the study. I finally thank all who helped me.

## **Abstract**

This is a prospective, analytic, and descriptive study which is conducted in Aljazeera state, Sudan. The aims of this study to measure fetal radius, ulna, fibula, tibia of normal singleton pregnant Sudanese ladies by ultrasound and related them to gestational age at 14-38 weeks.

In this study we collected data from 140 normal singleton pregnant ladies (each twenty pregnant women at 14, 18, 22, 26, 30, 34, 38 weeks of gestational age) who were came to Oma-algora specialize hospital during the period from July 2016 to February 2017. Fetal gestational age was calculated by using BPD, HC, AC, FL measurements in weeks. The fetal radius, ulna, fibula and tibia length were measured by cm. We used Statistic package for social sciences (SPSS) to analyze the data collected and presented them on tables and graphs.

The study shows that the growth of the fetal radius, ulna, fibula and tibia was linear from 14 through 38 weeks' gestation, but the various bones appeared to grow at different rates. It also revealed that growth pattern of long bone length, early fetal development is characterized by accelerated growth of these bones from 14 to 30 weeks followed by a decrease in weekly increment rate. Furthermore the growth of the radius and ulna accelerated compared with the fibula and tibia. It also showed that there was strong correlation between gestational age in weeks and RL, UL, FiL and TL in cm ( $r=0.997$ ), ( $r=0.984$ ), ( $r=0.981$ ) and ( $r=0.990$ ) respectively. The paired sample T-test the correlation was found statistically significant ( $P=0.000$ ) between GA/weeks and measurements of RL, UL, FiL, and TL/cm.

Therefore fetal radius, ulna, fibula, and tibia length can be used in the assessing of gestational age and in monitoring fetal growth.

## مستخلص الدراسة

هذه الدراسة دراسة وصفية، تحليلية، مستقبلية تم إجراؤها في ولاية الجزيرة-السودان، وكان الهدف الاساسي منها هو قياس اطوال عظم الكعبرة وعظم الزند وعظم الشظية وعظم القصبه للجنين في أعمار الأجنة بين 14-38 إسبوع بواسطة الموجات فوق الصوتية في حالة الحمل الطبيعي بجنين واحد لدي السيدات السودانيات إضافة إلي إيجاد علاقه بين النتائج المتحصلة من قياس أطوال هذه العظام و أعمار الأجنة المذكورة أعلاة لهذا جمع الباحث عينة حجمها مائة واربعون حالة من هذه الحالات الواردة بمستشفى أم القرى التخصصي (وهي عباره عن عشرون إمراة حامل عند الأعمار الجنينية الآتية وهي 14، 18، 22، 26، 30، 34، 38سبوعاً) خلال الفترة من شهر يوليو 2016 الى فبراير 2017 .

قد تم تحديد عمر الجنين بواسطة قياس عرض رأس الجنين في مستوي العظم الجداري ، قياس محيط رأس الجنين ، قياس محيط بطن الجنين وقياس طول عظم الفخذ للجنين. و كان قياس أطوال عظم الكعبرة وعظم الزند وعظم الشظية وعظم القصبه بواسطة السنتمرات . تم الإستفادة من برنامج الحزمة الإحصائية الإجتماعية لتحليل البيانات وعرضها في شكل جداول ورسومات بيانية.

أوضحت الدراسة أن علاقة نمو عظم الكعبرة والزند والشظية والقصبه للجنين خطية من 14 إلى 38 إسبوعاً من الحَمَل، ولكن يبدو أن العظام المختلفة تنمو بمعدلات مختلفة. وكشفت ايضاً نمط النمو لطول العظام الطويلة ، حيث يتميز تطور الجنين في وقت مبكر عن طريق النمو المتسارع لهذه العظام من 14 إلى 30 إسبوعاً تليها إنخفاض في معدل الزيادة الاسبوعية. وعلاوة على ذلك تسارع نمو عظم الكعبرة والزند مقارنة مع الشظية والقصبه.

أوضحت الدراسة ايضاً علاقة إرتباط قوية بين عمر الجنين بالاسبوع وقياس طولكُل من عظم الكعبرة بالسنتمرات حيث أن الإرتباط (r=0.984) و عظم الزند حيث أن الإرتباط (r=0.977) و عظم الشظية حيث أن الإرتباط ( r=0.981) و عظم القصبه حيث أن الإرتباط (r=0.990) .

تم التحليل باستخدام إختبار (T) لمقارنة عمر الجنين بالاسبوع وقياس طول كل من عظم الكعبرة والزند والشظية و القصبه بالسنتمرات في هذا العمر الجنيني حيث وجد أنه ذا أحصائية معنوية ( P =0000 ) . لذا يمكن إستخدام طول كل من عظم الكعبرة والزند والشظية و القصبه في تقييم عمر الحَمَل وفي رصد نمو الجنين .

## LIST OF TABLES

Table No.	Table name	Page No.
4.1	Mean, standard deviation, minimum, and maximum length of radius which are measured by cm	69
4.2	Mean, standard deviation, minimum, and maximum length of ulna which are measured by cm	70
4.3	Mean, standard deviation, minimum, and maximum length of fibula which are measured by cm	71
4.4	Mean, standard deviation, minimum, and maximum length of tibia which are measured by cm	72
4.5	Correlation between the Gestational Age and measurement of RL, UL, FiL, TL	73

## **LIST OF FIGURES**

<b>Figure No.</b>	<b>Figure name</b>	<b>Page No.</b>
2.1	diagram shows Relation of fimbriae and ovary	4
2.2	diagram illustrates Oocyte after ovulation	5
2.3	diagram shows Phase contrast view of the pronuclear stage of a fertilized human oocyte with male and female pronuclei and two-cell stage of human zygote	5
2.4	diagram illustrates changes in the uterine mucosa correlated with those in the ovary	6
2.5	diagram shows A 7.5-day human blastocyst, partially embedded in the endometrial stroma	7
2.6	diagram shows human blastocyst of approximately 12 days	8
2.7	diagram shows A, 13-day human blastocyst	9
2.8	diagram shows sagittal midline sections of embryos at various stages of development to demonstrate cephalocaudal folding and its effect on position of the endoderm-linked cavity	11
2.9	diagram shows transverse sections through embryos at various stage of the closure of the gut tube and ventral body wall	12
2.10	diagram shows midsagittal sections of embryos at various stages of development showing cephalocaudal folding and its effects upon position of the heart, septum transversum, yolk sac, and amnion	13
2.11	diagram illustrates development of the diaphragm	14
2.12	diagram shows A. Transformation of the pericardioperitoneal canals into the pleural cavities and formation of the	15

	pleuropericardial membranes	
2.13	diagram shows size of the head in relation to the rest of the body at various stages of development	16
2.14	diagram illustrates development of the limb buds in human embryos	18
2.15	diagram shows longitudinal section through the limb bud of a chick a core of mesenchyme and external view of a chick limb at high magnification	19
2.16	diagram illustrates endochondral bone formation	20
2.17	diagram illustrates Varieties of short-limb dysplasia according to the affected bones	27
2.18	ultrasound image illustrates lethal skeletal dysplasia	29
2.19	ultrasound image illustrates marked micromelia in a 30 week fetus with osteogenesis imperfecta	31
2.20	ultrasound image illustrates Camptomelic dysplasia in 20 week fetus with femoral bowing and the tibias were short and hypoplastic. The fibulas were hypoplastic and bowed	33
2.21	An ultrasound image at 19 weeks of gestation revealed rigid legs with the knees hyperextended. The arms were contracted and crossed over the chest with hands clenched polyhydramnios and micrognathia were also noted	35
2.22	ultrasound image of a fetus at 14 weeks with tetramelia and hydrops	38
2.23	ultrasound image shows Club hand	39
2.24	ultrasound image shows finger clenching in fetus	39
2.25	ultrasound image shows polydactyly (six fingers) in a 26	40

	week of fetus and duplication of the great toe	
2.26	ultrasound image shows ectrodactyly	41
2.27	ultrasound image shows clubfoot during a basic scan in a 19 week fetus	43
2.28	diagram shows Longitudinal waveform with compressions and rarefactions	44
2.29	Schematic of propagation, reflection and refraction	45
2.30	ultrasound image shows Correct gain control settings	49
2.31	diagram shows complete ultrasound unit	51
2.32	diagram shows Scanning planes that can be obtained with the transvaginal probe	52
2.33	ultrasound image shows up to 11 weeks measure the crown-rump length after 11 weeks measure the biparietal diameter	54
2.34	ultrasound image shows the biparietal diameter	55
2.35	ultrasound image shows Transverse section of the fetal abdomen demonstrating the landmarks required to measure the abdominal circumference	85
2.36	ultrasound image shows the length of the femur which is measured from end to end	60
2.37	ultrasound image shows the tibia and fibula	61
2.38	ultrasound image shows longitudinal section through a fetal humerus	62

2.39	ultrasound image shows a longitudinal section through the radius and ulna	62
------	---	----

4-1	scatter plot diagram shows the positive linear relation between gestational age by weeks in the X axis and measured RL by cm in Y axis.	69
4-2	scatter graph shows the positive linear relation between gestational age by weeks in the X axis and measured UL by cm in Y axis	70
4-3	scatter graph shows the positive linear relation between gestational age by weeks in the X axis and measured FiL by cm in Y axis	71
4-4	scatter graph shows the positive linear relation between gestational age by weeks in the X axis and measured TL by cm in Y axis.	72

## **LIST OF ABBREVIATIONS**

AC : abdominal circumference

AER : apical ectodermal ridge

BPD : biparietaldiameter

CHL : crown-heel length

Cm : centimeters

CNS : central nervous system

CRL : crown-rump length

3DUS : three-dimensional ultrasonography

EDD : expected date of delivery

EEC : ectrodactyly, ectodermal dysplasia, cleft lip/palate

FGF : fibroblast growth factor

FiL : fibula length

FL : femur length

GA : gestational age

HC : head circumference

HCG : human chorionic gonadotropin

HOX : homeobox

IUGR : intra-uterine growth restriction

KHz : kilo hertz

LMP : last menstrual period

MHz : mega hertz

OA : occipitoanterior

OP : occipitoposterior

OT : occiptotransverse

RL : Radius length

SHH : sonic hedge hog

Sp : spine

St : stomach

TAU : thrombocytopenia and absent ulna

TGC : time gain compensation

TL : tibia length

UL : ulna length

UV : umbilical vein

Wk : week
