

ACKNOWLEDGMENT

In the beginning, I thank Allah for all his grace also I want to thank Dr. AdilYousif for overseeing this research .I would like to thank my parents, whose pray and avoidance are with me during the study period and providing me all support I need .I wish to thank my colleagues who provide valuable assistance, which made me complete the research.

Abstract

It's difficult to make a decision, without enough information because the databases in the branches of Sales department of National Paints factory are not integrated for management of Information and decisions making. So for this reason we prepared a study on designing of data warehouse model to support forecasting and decision making of paint sales. The main objective of this research is to collect those data in one repository. Data warehouse is responsible for consistency of information. The aim of data warehousing is to organize the gathering data and store it in single repository. Data warehousing solve the problem and provide technology which enables the user or decision maker to process the data in short time. With the help of data warehousing, manager extract the Knowledge in real time and it helps the manager in the decision making process. The research used SQL Server Data Tool that contains SQL Server Integration Services (SSIS) due to consistency and integrating data. Also, it used SQL Server Analysis Services (SSAS) to analyze data and build a dimensional model. Manager can understand the data easily by used cubes of dimensional model. Also, manager can drill down or up by adding or removing attributes from their analyses with excellent performance. Moreover, the researcher explored data by using Time Series Algorithm and prediction of the quantity during the first quarter will be in January and February between 1-50 products only, whereas its increase to 101 products in begins of March. As well as, the researcher used SQL Server Reporting Services (SSRS) to review reports after analysis to answer to questions of manager and support him to make decisions.

المستخلص

يصعب اتخاذ أي قرار دون الحصول على معلومات كافية وذلك لأن قواعد بيانات فروع مبيعات مصنع الوطنية للدهانات غير متكاملة لإدارة المعلومات واتخاذ القرار لذلك قمنا بدراسة بناء مستودع البيانات لدعم اتخاذ القرار والتتبؤ بمبيعات الدهانات وكان الهدف الرئيسي من البحث هو إنشاء مستودع بيانات لتجميع كل البيانات فيه .مستودع البيانات هو المسؤول عن تناسق المعلومات . الهدف من مستودع البيانات هو تنظيم البيانات المجمعة وتخزينها في مستودع واحد .مستودع البيانات حل مشكلة البحث ووفر تقنية تساعد المستخدم او صانع القرار لمعالجة البيانات في زمن قصير .بمساعدة مستودع البيانات يستطيع المدير استخراج المعرفة في الزمن المناسب التي تساعد المدير في عملية اتخاذ القرار .تم استخدام أداة خدمات التكامل في خادم قاعدة البيانات لتكميل البيانات والتأكد من تجانسها . كما تم استخدام خدمات التحليل في خادم قاعدة البيانات لتحليل البيانات وبناء نموذج الأبعاد يمكن للمدير فهم البيانات بسهولة باستخدام مكتباتنوموذج الأبعاد .كما يمكن للمدير أن يضيف أو يزيل أي سمة من التحليل معالمحافظة على الأداء الممتاز . كما تم التنقيب في البيانات باستخدام خوازمية التسلسل الزمني والتتبؤ بأن الكمية المبيعة خلال الربع الأول سوف تكون في شهر يناير وفبراير تتراوح بين 1- 50 منتج فقط بينما تتزايد في بداية شهر مارس الى 101 منتج . وتم استخدام خدمات التقرير في عرض تلك التقارير بعد تحليلها للإجابة على اسئلة المدير ودعمه في اتخاذ القرار .

TABLE OF CONTENTS

الآية.....	I
Acknowledgment.....	II
Abstract.....	III
المستخلص	IV
Table of Contents.....	V
List of Figures.....	VIII
List of Tables.....	IX
List of Abbreviations.....	X
CHAPTER1: Introduction	
1.1 Introduction.....	1
1.2 Research Background.....	1
1.3 Problem Statement.....	2
1.4 Research Objectives.....	3
1.5 Propose Solution	3
1.6Scope.....	.4
1.7 Thesis Structure.....	.4
CHAPTER 2: Literature Review	
2.1. Introduction.....	5
2.2. Background Theory.....	5
2.2.1 The data warehouse concept.....	5
2.2.2 Main components of the data warehouse.....	6
2.2.3.Differnce between data warehouse and datbase.....	9
2.2.4 Data warehouse modelling.....	10
2.2.5 Star schema.....	10
2.2.6 Dimensional model.....	11
2.2.7 Fact tables.....	12
2.2.8 Dimension tables.....	13
2.2.9 Data Marts.....	13

2.2.10 Data warehouse VS Data mart.....	14
2.2.11 Data mining.....	14
2.2.12 Microsoft Time Series Algorithm.....	14
2.2.13 Data mining Exeteson.....	15
2.3 Related Studies.....	16
2.4 About Company and Data Set.....	18

CHAPTER3: ResearchMethodology

3.1 Introduction.....	19
3.2 Research Design.....	19
3.2.1System Analysis.....	20
3.2.2 Preparation to Design of a dimensional model.....	21
3.2.3The Data Mining Process.....	21
3.2.4 Data Required for Time Series Models.....	22
3.2.5 How the Algorithm Works.....	22
3.3 Tool Used in Methodology.....	23

CHAPTER4: The Proposed Data warehouse Implementation

4.1 Introduction.....	24
4.2 System Design.....	24
4.3 Logical Models.....	25
4.3.1 Fact and Dimension Tables.....	25
4.4 Design of the Physical Database.....	26
4.4.1.Fact and Dimension Tables.....	27
4.5 Design of the ETL Process	28
4.5.1.Dimension Tables Incremental Processing	28
4.6 SQL Server Analysis Services (SSAS).....	32
4.7 Cube.....	32
4.8SQL Server Reoprt Services (SSRS).....	38
4.8.1 Design Report.....	38

4.8.2 Preview Report.....	39
4.9 Data Mining using Microsoft Time Series Algorithm.....	43
4.9.1 Viewing Time Series Model.....	44
4.9.2 Create Time Series Predictions.....	45
CHAPTER 5: Conclusions	
5.1 Conclusion.....	47
5.2 Recommendations.....	47
