## **Effect of Solar Radiation Intensity and Temperature on the Efficiency of the Solar Cell**

**دراسة تأثير شدة الاشعاع الشمسي ودرجة الحرارة على كفاءة  
الخلية الشمسية**

**A thesis submitted for the partial fulfillment of the  
requirements of M.Sc. degree in Physics**

**Prepared by:**

**Mored Yagoub Ahmed Mohamed**

**Supervised by:**

**Dr. Amel Abdallah Ahmed Elfaki**

**Sep.2020**

## **Acknowledgements**

First and foremost, I would like to express my sincere gratitude to my supervisor Dr. Amel Elfaki for her guidance and encouragement during this work. Her knowledge and experience have been a path of illumination for me to finish this work. Furthermore, many thanks are due to staff members of department of Physics, Sudan University of Science and Technology for being as a family. Also I would like to all of my teachers upon the long journey of education. During this journey, I was extraordinarily fortunate in having many nice teachers who gave interesting feedback and valuable lessons in different knowledge, as well as overcame many hard times. Without them I would never be able to love and carry out my studies. I am sorry that no names written, but indeed no one forgotten. Last but not least, my greatest debt is to my family for their support, endless patience and encouragement in all forms.

## **Abstract**

This study discusses the effect of the intensity of solar radiation and the temperature on the efficiency of the solar cell, and the study included five results at different times during the day, and both the intensity of solar radiation and the temperature were measured after connecting the solar panel and taking the readings of both voltmeter and current. Based on this, we concluded that the efficiency of the solar cell increases with the increase in the intensity of solar radiation and the temperature and decreases with the decrease in the intensity of solar radiation and the temperature and we conclude from this that the more the sun is at its peak, the efficiency of the solar cell is at its highest value.

## **المستخلص**

تناقش هذه الدراسه تأثير شدة الأشعاع الشمسي ودرجة الحراره علي كفاءة الخليه الشمسيه ،وشملت الدراسه على خمسه نتائج في أوقات مختلفه خلال النهار، وتم قياس كل من شدة الأشعاع الشمسي ودرجة الحراره بعد توصيل اللوح الشمسي وأخذ قراءات كل من الفولتميتري والتيار.استخدم البحث طريقة المنهج التجريبي وأستنادا إلى ذلك توصلنا إلى أن كفاءة الخليه الشمسيه تزيد بزيادة شدة الأشعاع الشمسي ودرجة الحراره وتنقص بنقصان شدة الأشعاع الشمسي ودرجة الحراره ونستنتج من ذلك أنه كلما كانت الشمس في قمة زروتها تكون كفاءة الخليه الشمسيه عند أعلى قيمة لها.
