

List of tables

- Table 1.1 Classification of colloids
- Table 1.2 Some typical emulsifying agents
- Table 3.1 Moisture content of three gums species
- Table 3.2 Blends composition of three gums

List of figures

- Figure 1.1a The two steps “before” and “after” excitation, of a three level system, by electron impact from the lowest energy level E_0 to the highest one E_2 .
- Figure 1.1 b The two steps “before” and “after” of spontaneous emission of a three level system from level 2 to level 1.
- Figure 1.2 The two steps “before” and “after” of a three level system undergoing stimulated emission from level 2 to level 1 by a photon.
- Figure 1.3 The energy level diagram for neodymium, a four energy level system in which laser action occurs between two intermediate levels above the ground state.
- Figure 1.4 The basic components of a discharge excited gas laser.
- Figure 1.5 An energy level diagram of helium and neon .
- Figure 1.6 Probable initiation steps in photoinduced polymerization of acrylamide in the presence of methylene blue and triethanolamine.
- Figure 1.7 Polarized light beam incident on a particle.
- Figure 1.8 Wattle blossom model of the arabinoglactan-protien.
