THEORY OF FREE STREAMLINES IN LIQUID FLOWS APPLIED TO CAVITATION PROBLEMS

By Faiz Gad ELmola Adam Awad

Athesis submitted in partial fulfillment for the degree of M.Sc. in Mathematics

Sudan University of Science and Technology Faculty of Science 2003

Dedication

To my father brothers, sisters, and friends.

Acknowledgment

I would Like to thank the following Persons:

My supervisor Dr. Bakri Mirghani Ahmed for his his advice to carry out this research.

Thanks are directed to my teachers, the head & staff members of Math. Dept.- Faculty of Science – SUST:

My family for their support and encouragement. And to Sufyan Abd Elwahab for typing this research.

Abstract

We first give a survey of conformal mappings on the complex plane. Then a general study of cavitation is given. This is followed by a discussion of tree streamlines in various two dimensional examples of liquid flow

Finally we give application of the theory to some cavitation problems.

بدأنا البحث بدراسة شاملة عن التحويلات الحافظة للزوايا في الم ستوي المركب. وبعد ذلك عرض البحث دراسة عامة عن التفريغ في السوائل المتحركة . تلي ذلك منا قشة عن خطوط التيار الحرة في عدة أمثلة من انسياب السوائل في بعدين.

اخيراً طبقت هذه النظريات علي بعض مسائل التفريغ في السوائل المتحركة.
