| <u>CHAPTER ONE</u> | <u>INTRODUCTION</u> |
| CHAPTER TWO | SUBSTATION OVERVIEW |
| CHAPTER THREE | SUBSTATION AUTOMATION BASED ON IEC61850 |
| CHAPTER FOUR | APPLICATION OF GOOSE |
| CHAPTER FIVE | APPLICATION TEST |
| CHAPTER SIX | CONCLUSIONS AND RECOMMENDATIONS |

Problem Definition

- Intelligent Electronic Devices (IEDs) from different manufacturers, creates difficulties in integrated systems.
- hard wiring
- Difficulties in maintenance and expansion

Objectives

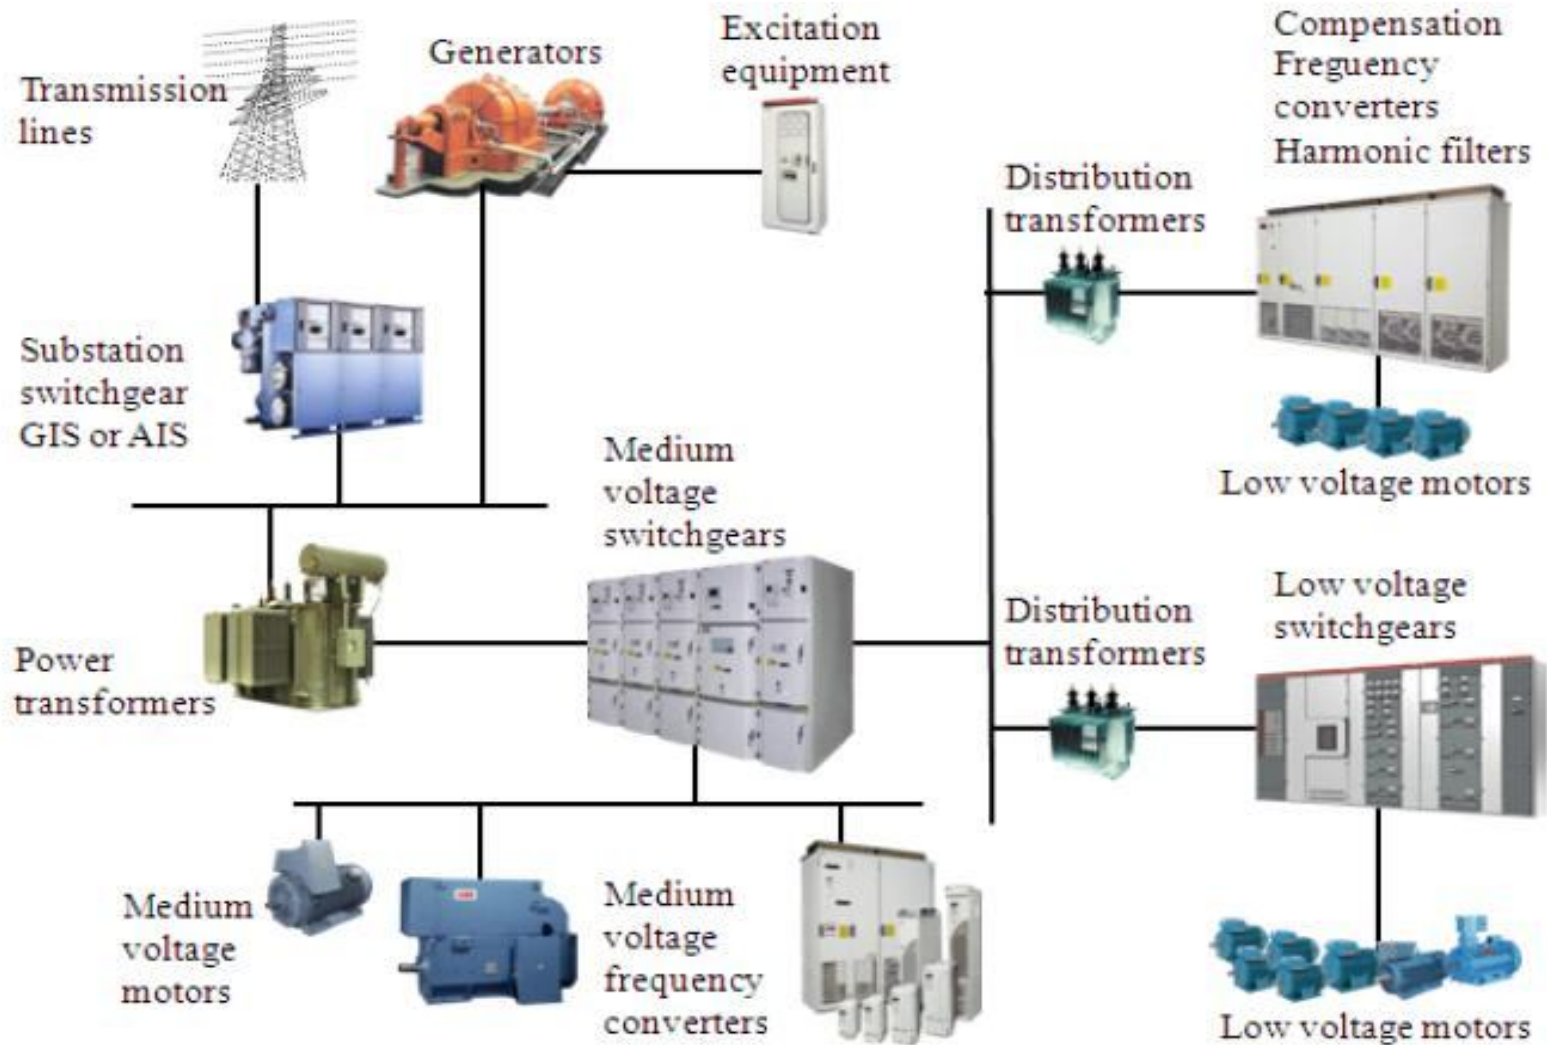

- Substation standardization.
- Implementation of Generic Object Oriented Substation Event (GOOSE) message.
- Using of Substation Configuration Language (SCL).

Methodology

- HELINKS (STS) Substation software Tool Set.
- Greater Nile Petroleum Operating Company (GNPOC) Local Area Network(LAN).

Information Structure In IEC61850

concept of virtualization

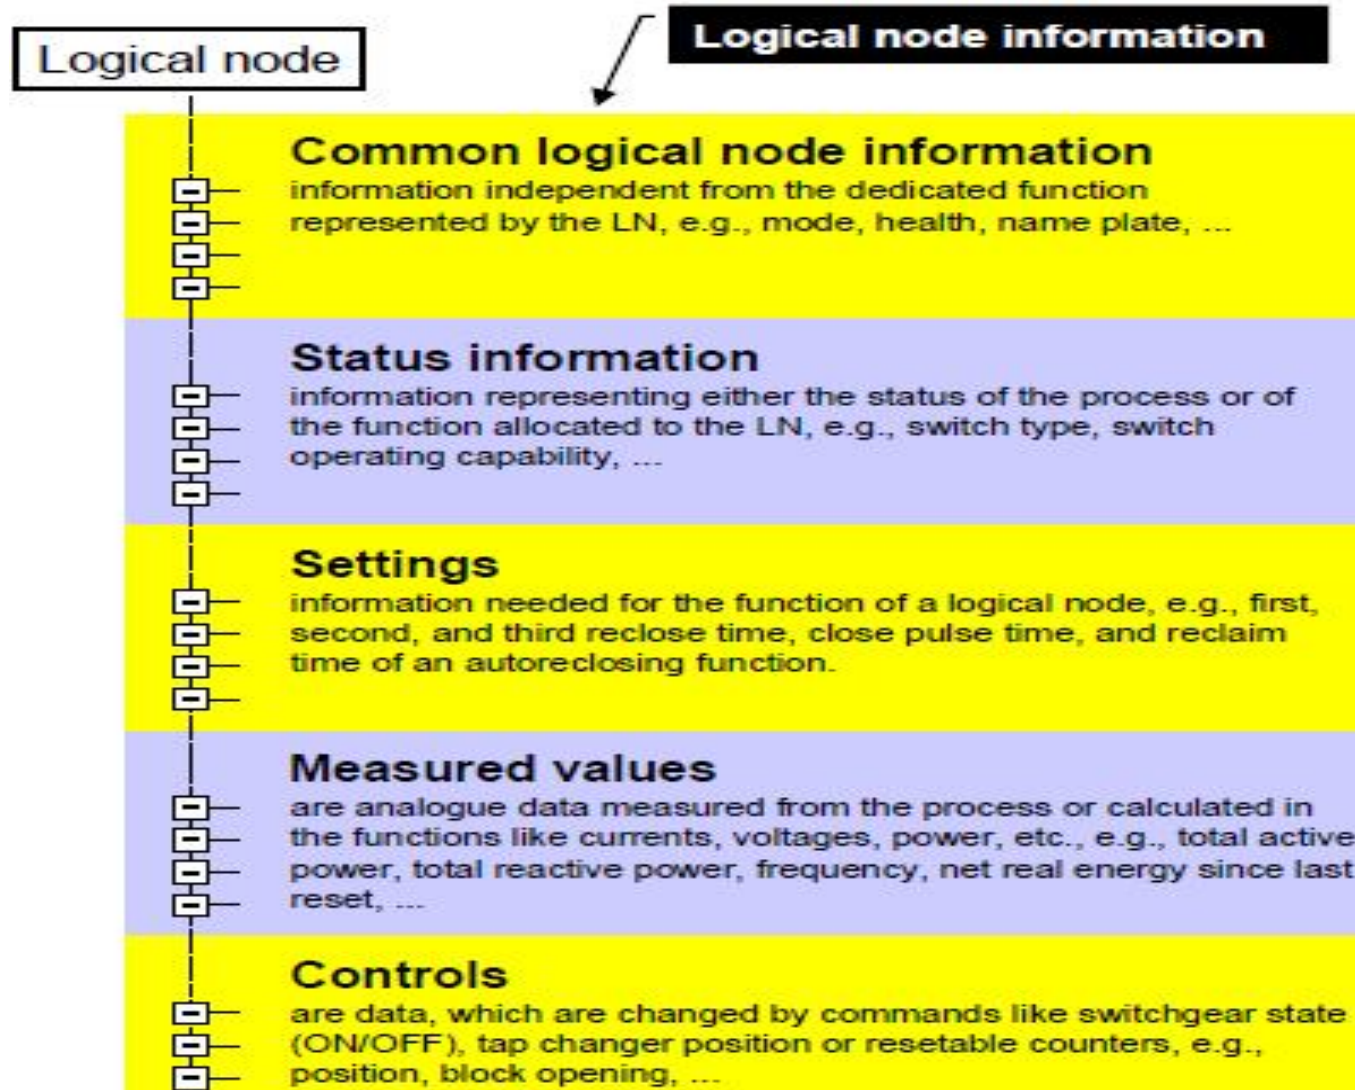

Data model

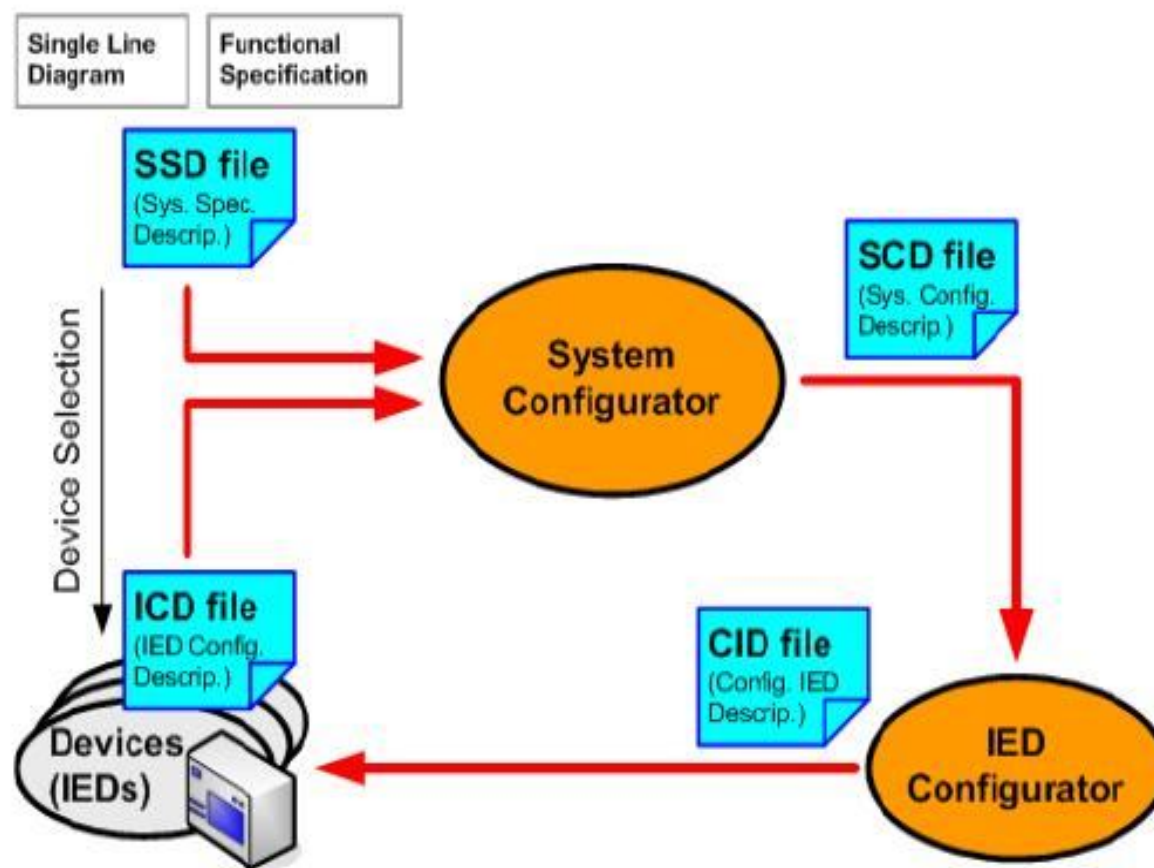

- Physical device: access by network address
- Logical device: collection of logical nodes, implemented in one IED
- Logical node: Function in the real device e.g. XEBR circuit breaker.
- Data & data attributes: properties of logical nodes e.g. position
- Several logical nodes builds a logical device(bay unit).
- Logical device builds in one IED.
- Logical devices are not distributed.

Logical node information categories

SubStation configuration Language (SCL)

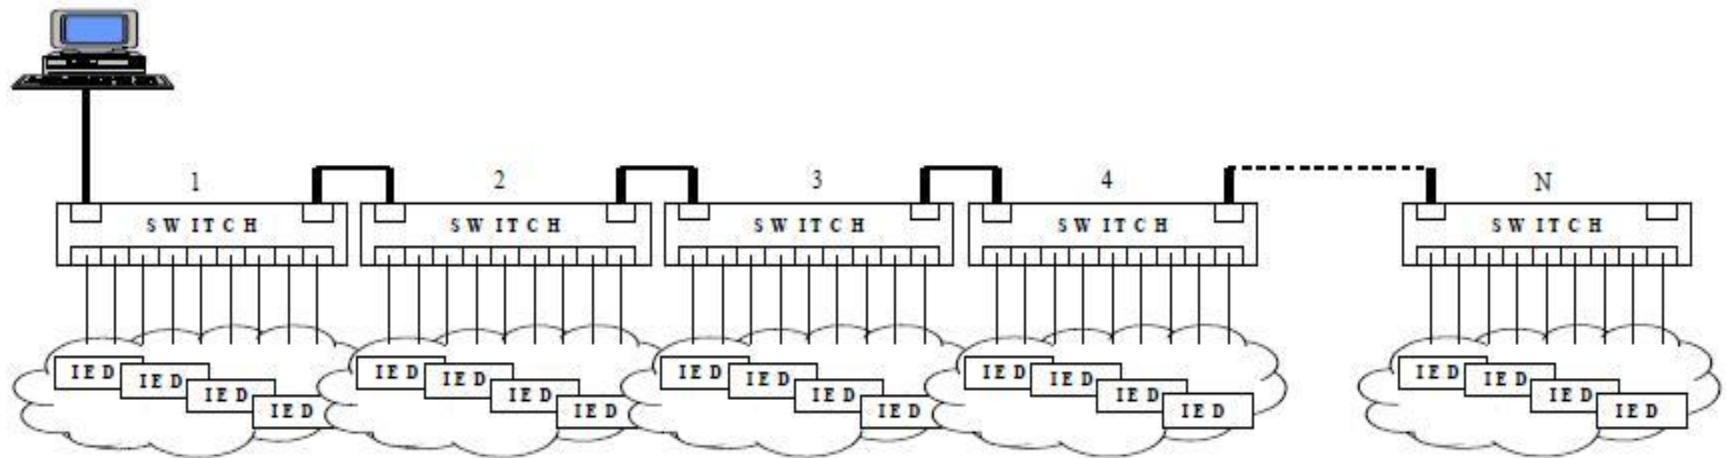

SubStation configuration language (SCI)

- **Four different file types:**
 - ✓ Substation Specification Description(SSD).
 - ✓ Substation Configuration Description(SCD).
 - ✓ IED capability Description (ICD).
 - ✓ Configured IED description(CID)
- **Five section per file:**
 - ✓ Header.
 - ✓ Substation.
 - ✓ Communication.
 - ✓ IED.
 - ✓ Data type template:

Documentation

- Substation automation system documentation:
 - ✓ Hardware documentation.
 - ✓ Parameter documentation.

- Documentation concerning GOOSE
 - ✓ Signal list.
 - ✓ Logical diagram

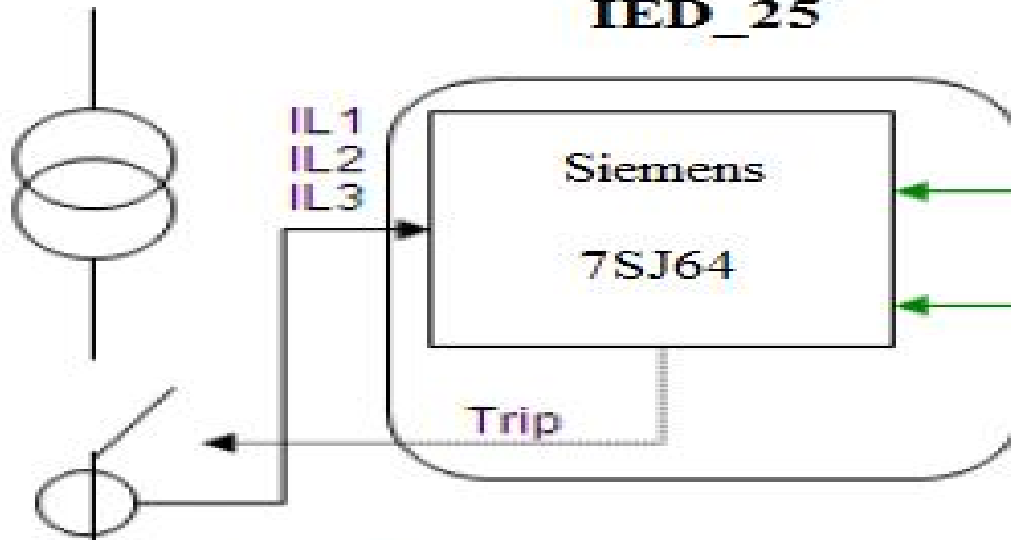

| example publisher | Example signal description | Example data attributes | Example GOOSE APPID | Example subscriber |
|--------------------------|---------------------------------------|--------------------------------|----------------------------|----------------------------|
| IED ABB REF 615_26 | ARC light detection signal,sensor1 | LD0.ARCSARC11.F ADet.stVal | 0001 | IED_25 Siemens 7SJ64 |

| Example description | Example input signal | Example logical diagram | Example output signal | Example description |
|---------------------------------|-----------------------------|--|------------------------------|----------------------------|
| Arc light detected, sensor 1 | IED_26; GOOSE 0001 | <pre> graph LR I1[1] --- AND[AND] I2[1] --- AND AND --- O[IED_25 B01,B02] </pre> | | |
| Over current protection start | IED_25 B16,B17 | | | IED_25 B01,B02 |

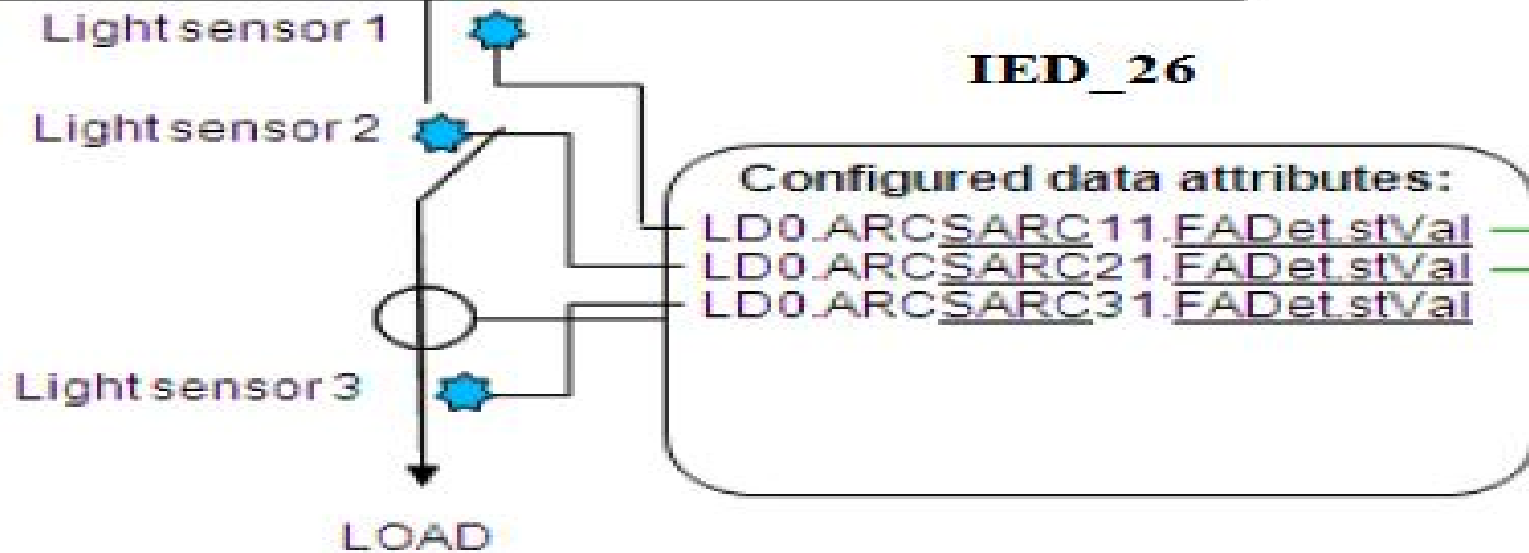

Arc Flash Protection Application

- the arc flash protection is detected by protection logical node called sensing arc (SARC).
- SARC logical node uses as a function to monitor phases and can detect light.
- SARC function sends trip signal to the related circuit breaker by using GOOSE message.

IED_25

IED_26

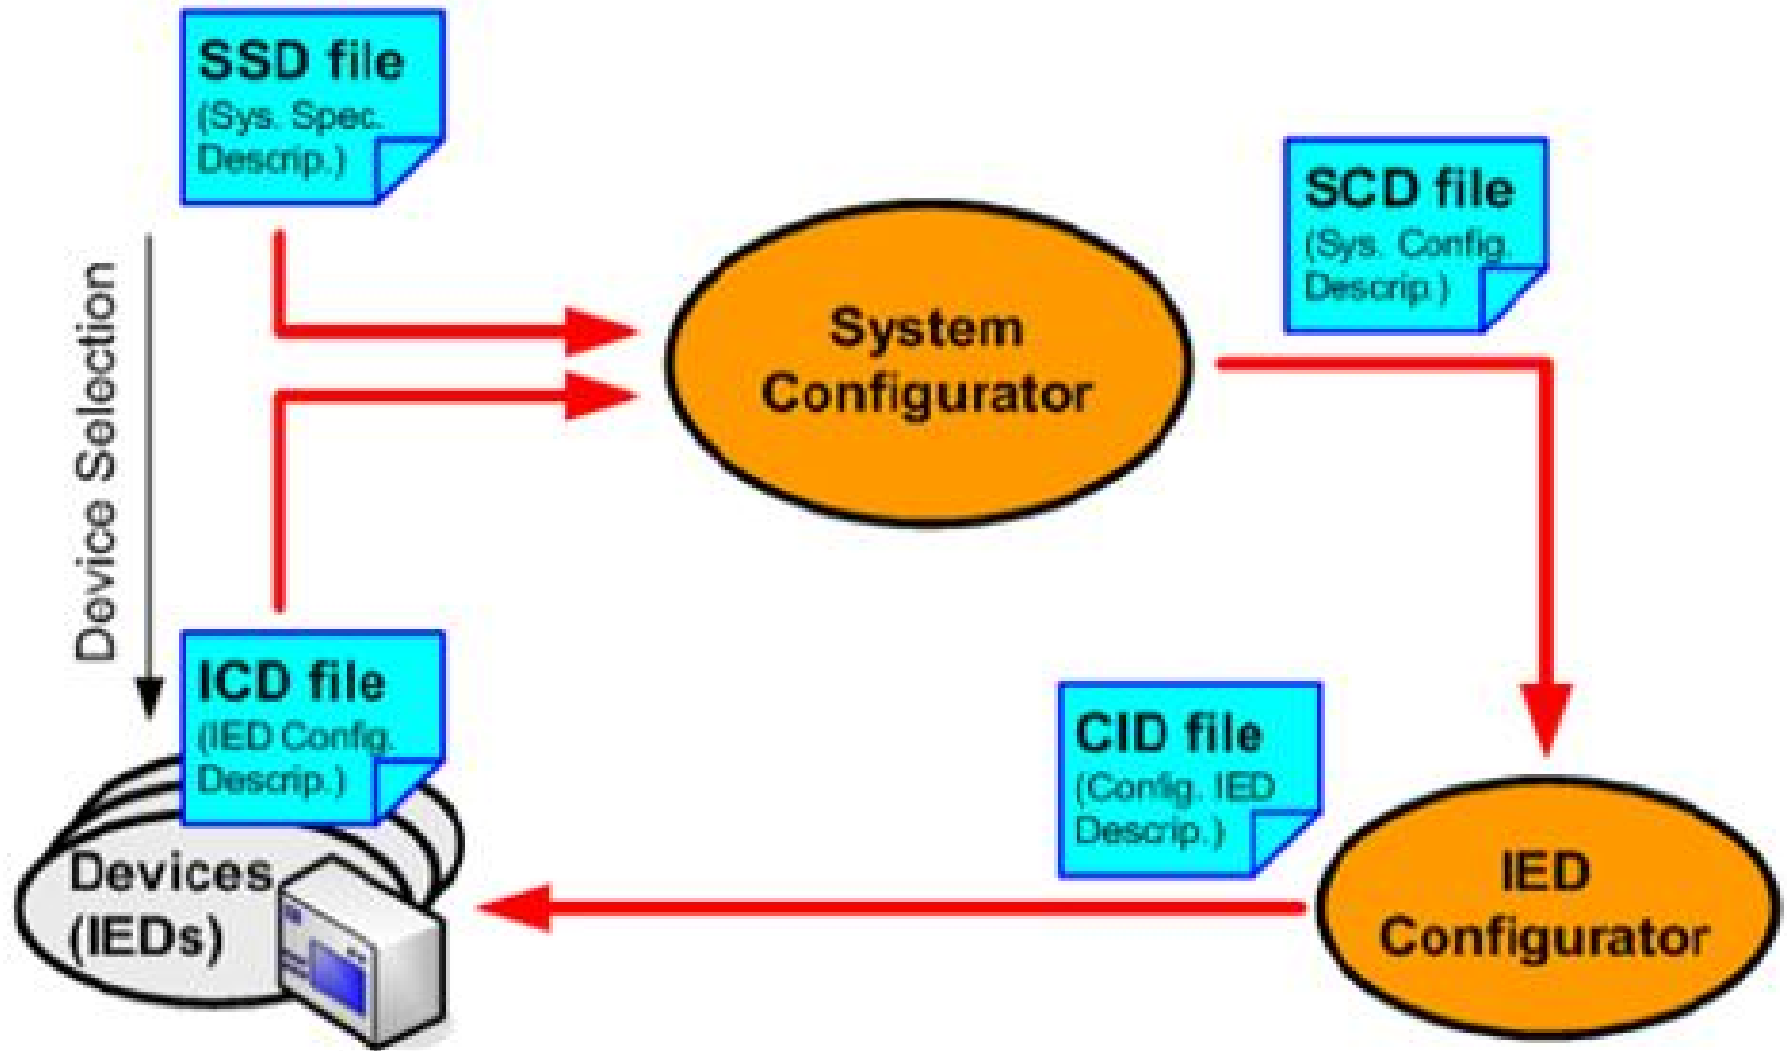

Intel Igent electronic Devices (IED) Configuration

HELINKS (STS) software, used to configure IED Siemens- 7SJ64, by creating these files:

- System specification description (SSD).
- Loading the IED capability description (ICD).
- substation configuration description (SCD).
- Configured IED description (CID)

| CHAPTER ONE | INTRODUCTION |
| CHAPTER TWO | SUBSTATION OVERVIEW |
| CHAPTER THREE | SUBSTATION AUTOMATION BASED ON IEC61850 |
| CHAPTER FOUR | APPLICATION OF GOOSE |
| CHAPTER FIVE | APPLICATION TEST |
| <u>CHAPTER SIX</u> | <u>CONCLUSIONS AND RECOMMENDATIONS</u> |

CONCLUSIONS

- IEC 61850 Ethernet base provides interoperability.
- Investigation of GOOSE application between siemens7SJ64 and ABB REF615 has been confirmed.
- GOOSE can reduce the cost of the substation installation ,maintenance and expandability
- HELINKS(STS) is useful as substation configuration language(SCL) ,for engineers.

Recommendations

- The challenges of GOOSE based are related to security of the network, LAN is recommended to use.
- GOOSE should be used for less time critical applications, such as interlocking.
- GOOSE based application, require new type of training.
- Other tools for configuration of the IEDs based on IEC61850:
 - ✓ ASE Visual SCL (VSCL)
 - ✓ HELINKS Substation Tool Set (STS)
 - ✓ H&S Substation Configuration Tool (SCT)
 - ✓ KALKITECHSCL Manager (SCLM)

Thanks
