

Abstract

Designing a system to select junior basketball player in Khartoum State

The goal of this research is to design a system through which we can choose junior basketball players in Khartoum state containing the three stages of selection; Introductory, Professional and Final. They include selected standards and development programs according to the system.

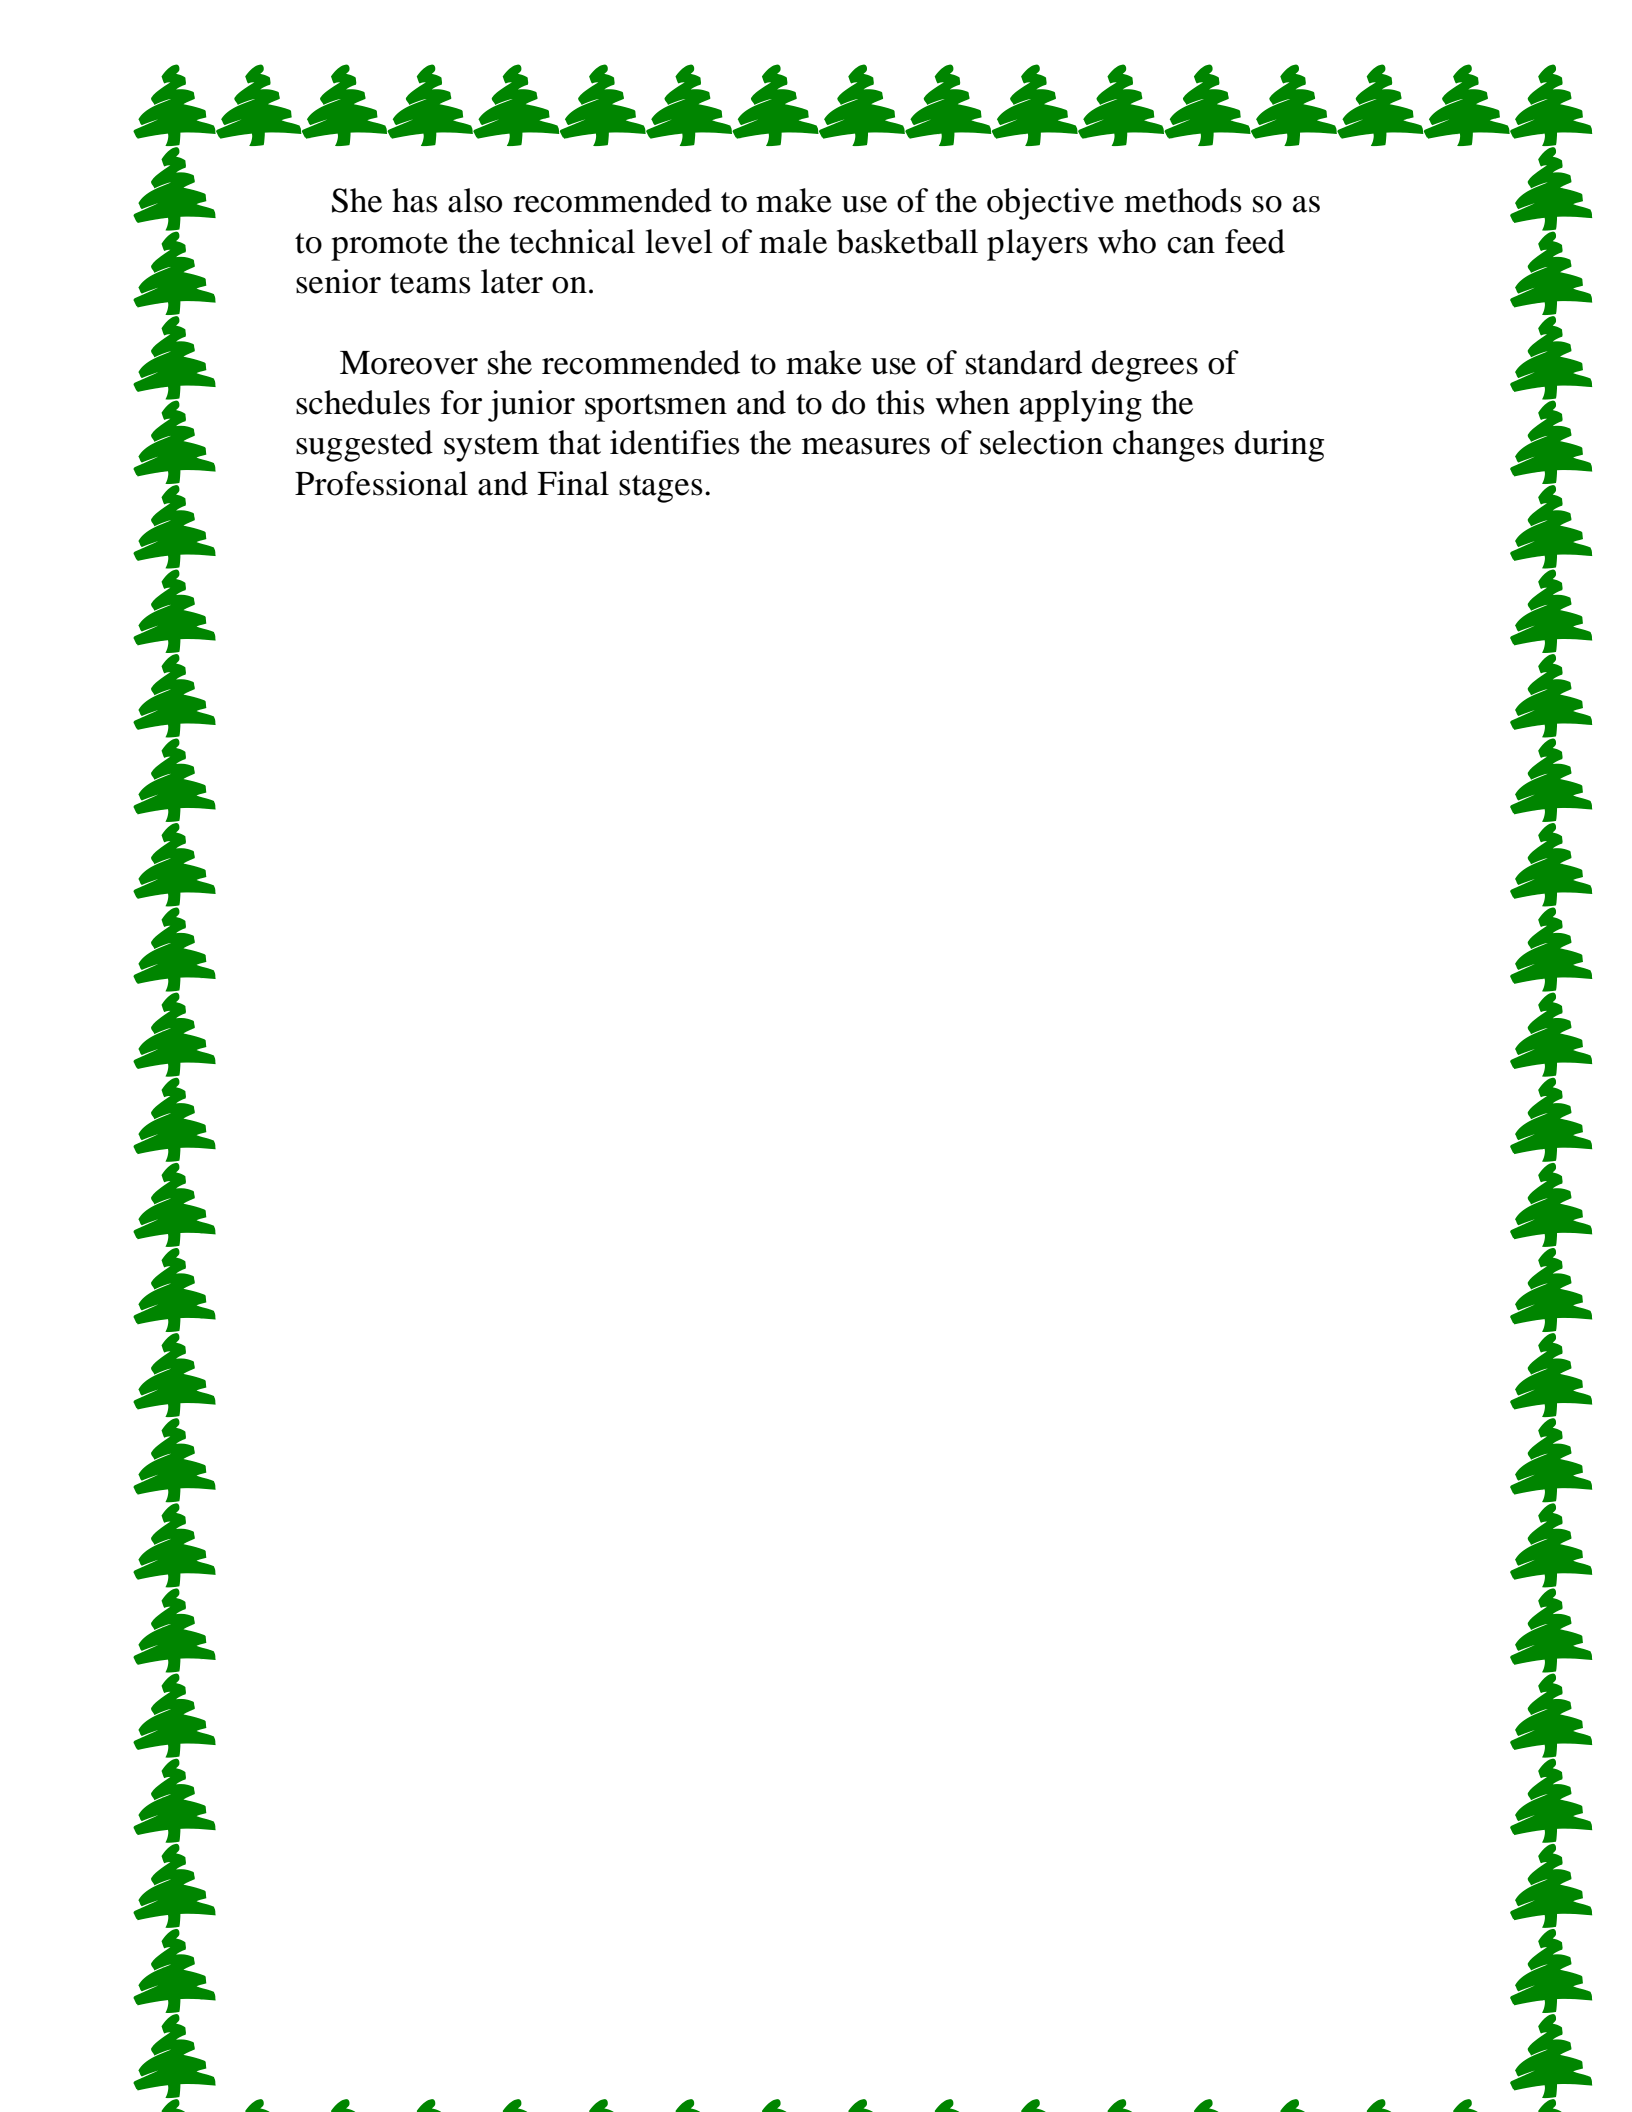

The minor aim of the research is to determine the changes of the early discovery of junior basketball players who are able to practice basketball in Khartoum during the stages of selection and their tests as well as to put measurable schedules to these tests.

The researcher has taken a sample of (1143) youngsters from Khartoum in which she has used the descriptive method for it suits the nature of the research. The researcher has used factors analysis to reach the changes that determine early discovery of junior sportsmen during Introductory Selection stage and its tests. The researcher has also benefited from Experts view points to determine the changes behind the suggested selection as well as its tests throughout Professional and Final stages.

The data have been processed statistically by using factors analysis, Person theorem, arithmetic mean and standard deviation.

The study has succeeded to identify the limits of early discovery changes of the junior sportsmen who are able to practice basketball in Khartoum during Introductory stage and its tests as well as to put schedules to these measures. In addition, the study has specified the changes of the suggested selection during Professional and Final stages and their tests. The study has been ended up with a suggested designing system to select junior basketball players in Khartoum stage.

The researcher has recommended that the related authorities such as the Basketball Union, the Olympic Committee, The Ministry of Culture, Youth and Sports, should apply this system on the levels of states and municipalities in order to promote the conditions of the method selection.

She has also recommended to make use of the objective methods so as to promote the technical level of male basketball players who can feed senior teams later on.

Moreover she recommended to make use of standard degrees of schedules for junior sportsmen and to do this when applying the suggested system that identifies the measures of selection changes during Professional and Final stages.
