## **Dedication**

My parents, to them I shall always be grateful.

To my family members

## **Acknowledgement**

Firstly and lastly thanks to Allah who gave me persistence, support and patience to complete this work.

It is my proud privilege and immense pleasure to thank my supervisor Dr. Muzzamil Atta Ali Abdalla and Professor. Mohamed Tageldin Ibrahim Omer for their luminous guidance, inspiration, efforts in planning and execution of my theoretical and research work during the entire period of my study.

It is my honour to thank the former Director of Vet hospital Lieutenant-colonel Dr. Ajai Kumar valuable assistance and cooperation by all the staff India vet of UNMIS. My appreciation also goes to the Lieutenant-colonel Dr. Shucber Shighe for availing me all the necessary facilities for the successful completion of my studies.

Dr. Raja Mustapha Mohamed Ahmed providing me the necessary reference pertaining to my work is greatly acknowledged.

I express my profound gratitude to my advisory, Dr. Kamal El-Dein Abdel Wahab, Peter Ayul Othow, Wani Antiuo Sioso and El-Sadge Arbab Haggre for their valuable guidance and suggestion during my study.

This work would not have been completed without the help of my family members during the entire study period.

**Samoul Hassan Mohammed Hassan**

## **Acronyms**

AOAD: Arab Organization for Agricultural Development.

ARP: Annual Reproductive Performance.

EDF: European Development Fund.

FAO: Food and Agricultural Organization.

ILAC: International Livestock Centre for Africa.

INDBATT: Indian Battalion.

MDM: Meteorological Department Malakal.

MARF: Ministry of Animal Resources and Fisheries.

MFEP: Ministry of Finance and Economic Planning.

NADC: National Animal Disease Center.

NGOs: Non-Government Organizations.

NOPA: The project for Nomadic Pastoralists in Africa.

RMANR: Regional Ministry of Agriculture and Natural Resources, Southern Region Planning Department.

SDG: Sudanese pound.

UNMIS: United Nation Mission in Sudan.

WAD: West African Dwarf.

WSARP: Western Sudan Agric. Research Project Range / Livestock Research Activities.

## Abstract

The present study summarises the results of the survey on livestock management that were intended to formulate an integrated rural development plan for the Malakal area. An extensive survey of the literature has revealed a total lack of information's on the Nilotc goat in the completely Malakal area. This study was intended to obtain some information on herd structure, population size, breed, managerial practices and the production parameters, reproduction, socio-economic impacts and constrains of the Nilotc goats in the Malakal area.

The major livestock species in the study area were goats, sheep, and cattle. At present, most livestock in Malakal area are kept extensively under traditional management and have acquired knowledge of livestock keeping through field experiences. This study was based on materials and methods to evaluate the approach to analyze the system of management, performance of Nilotc goats at their natural habitat and constraints of Nilotc goats raising in the area of study. The research involves collection of primary data and secondary data on the various parameters through direct field surveys using questionnaire, interviews and participatory observations.

Means, standard error of means for tested quantitative traits and by Chi-square qualitative traits were calculated using STATISTICA software computer program. Study showed that the Nilotc goat is an important meat goat breed in the Malakal part. The native tract of the breed is the Nilotc goats' district of Malakal. Nilotc goats are small animals, short hair ruff its colour is very variable; most common is a mixture of black and whitish hair. The Nilotc goat flock structure was  $17.37 \pm 6.66$ . The heart girth, body length and height at withers of Nilotc goats at full mouth age were  $57.90 \pm 3.45$  cm,  $52.23 \pm 2.09$  cm and  $55.47 \pm 2.17$  cm respectively in male and  $59.73 \pm 4.33$  cm,  $53.80 \pm 3.69$  cm and  $55.93 \pm 2.12$  cm, respectively in the female. Body weight of Nilotc goats at full mouth age was 24.5 kg. The average age at first mating was 6.0 to 8.2 months and the average age

at first kidding was 15.6 months. The survey shows that the Nilotic goat has a sex ratio of male/female 1: 3. Herdsman kept breeding bucks, when available in the herds at all times and exercised no controlled mating.

The birth weight of Nilotic goats in the present study is  $2.2 \pm 0.72$  kg for both sexes. The weaning weight at 90 days (3 months) was  $7.3 \pm 1.79$  kg for both sexes. Analysis of the current study is showing the means of mature weight are  $17.3 \pm 2.8$  kg.

The management of livestock during the wet season, a few of the respondents kept their animals inside Luaks during the rainy season, while the majority of the respondents do not keep their animals inside cattle-byres during the wet season. During the dry, season that at the end of the rainy season, all the Nilotic tribes take their animals in towards the riverine grazing land (Toich) by late February or early March.

Several factors impede the productivity and reproductively of Nilotic goats in Malakal area including feed shortage, animal diseases, low productivity, socio-economic, marketing and security situation.

## ملخص الأطروحة

أوضحت نتائج المسح الميدانية في الدراسة عن إمكانية إدماج منظومة إدارة حيوانات المزرعة وفق خطط برنامج قطاع التنمية الريفية بمنطقة ملَّال إذ إن معظم حيوانات المزرعة بالمنطقة تدار تحت إدارة تقلدية توارثها المربى من خلال الممارسة العملية بالمرعى. و بالاطلاع على الدراسات السابقة أوضحت الدراسة عدم وجود معلومات مسبقة عن الماعز النيلي في منطقة ملَّال رغم وجود أنواع أخرى تمثل في الأبقار والضأن ، ولذا ركزت الدراسة على بعض المعلومات حول شكل تركيب القطيع و حجم العشيرة و السلالة والأساليب المتبعة للرعاية إلى جانب المقادير الإنتاجية و التنازلية وتقييم الأثر الاقتصادي و الاجتماعي والمحددات البيئية التي تواجه الماعز النيلي بالمنطقة.

وضعت الدراسة وفق منهجية علمية ارتكزت على المبادئ والأسس العامة في تقييم وتحليل الوضع البيئي إلى جانب طرق أداء ونظم إدارة الماعز النيلي في بيئه الطبيعية والتعرف على محددات ومعوقات التربية في منطقة الدراسة. وقد تضمن البحث البيانات الأساسية أو الأولية والثانوية و مختلف القياسات من خلال المسح الميداني المباشر باستخدام الاستبيان و المقابلات والمشاهدات المباشرة.

تم إجراء اختبار للمتوسطات و الخطأ القياسي فيما يتعلق بالصفات الكمية و واختبار مربع كأي للصفات النوعية و قد تمت معالجتها باستخدام الحاسوب الآلي وفق برنامج التحليل الإحصائي. من خلال النتائج أشارت الدراسة إلى إن الماعز النيلي يعتبر من أهم سلالات اللحم في منطقة ملَّال كما انه يتصف بصغر الحجم و قصر الشعر وتجعيده إلى جانب تباين الألوان والتي تتراوح مابين الأسود كلون سائد مع خليط من الأسود واللون الأبيض.

كما إن البنية التركيبية لسرب الماعز النيلي وفق المتوسط التالي  $6.66 \pm 17.37$ . ومن ضمن نتائج التحليل تراوحت المتوسطات ما بين  $3.45 \pm 57.90$  سم و  $2.09 \pm 52.23$  سم و  $2.17 \pm 55.47$  سم لكل من محيط الصدر وطول الجسم وارتفاع عند الغارب للذكر الماعز النيلي مكتمل النمو على التوالي بينما للأنثى النيلي (العنزة) مكتملة النمو فان المتوسطات مابين  $4.33 \pm 59.73$  سم و  $3.69 \pm 53.80$  سم و  $2.12 \pm 55.93$  سم لكل من محيط الصدر وطول الجسم وارتفاع عند الغارب على التوالي.

وقد وجدت الدراسة إن وزن جسم الماعز النيلي مكتمل النمو 24.5 كجم ومتوسط العمر عند أول تَسافد 6.0 إلى 8.2 أشهر و العمر عند أول ولادة في العنزة النيلية 15.6 شهراً . واستعرض المسح الميداني للماعز النيلي نسبة الذكور إلى الإناث 3:1 وراعي القطيع يحتفظ بذكر مكتمل النضج الجنسي ويتم التسافد دون التحكم فيه.

ويشار إلى نتائج الدراسة أن وزن الميلاد لجاء النيلية  $2.2 \pm 0.72$  كجم للجنسين وبينما كان وزن الفطام عند عمر 90 يوم (3 أشهر)  $7.3 \pm 1.79$  كجم للجنسين . وخلصت نتائج تحليل التباين أن متوسط وزن الماعز البالغ  $17.3 \pm 2.8$  كجم.

أوضحت الدراسة الأساليب المتبعة للرعاية حيوانات المزرعة خلال موسم الخريف حيث يتم الاحتفاظ بالحيوانات المزرعية داخل الوك خلال فترة موسم الإمطار وبنهاية موسم الخريف تبدأ فترة موسم الجفاف وكل القبائل النيلية تتوجه للمراعي علي وديان النيل في ما يعرف بالتيجان وذلك عند نهاية شهر فبراير ومطلع شهر مارس.

هناك عدة عوامل تعوق الماعز النيلي إنتاجياً وتناصلياً في منطقة ملkal وتتضمن ذلك الغذائي و إمراض الحيوان والإنتاجية المنخفضة و الوضع الاجتماعي الا اقتصادي و التسويق و الحال الأمنية.
