

Abstract

The IEEE 802.16 standard defines the specifications of the Worldwide Interoperability for Microwave Access (WIMAX) technology as a Broadband Wireless Access network. This type of networks supports multiservice traffic (voice and video) and guarantees the Quality of Service (QoS). The standard specifies four scheduling service algorithms to support QoS. This thesis provides an analytical study for voice interactive and video streaming performance in WIMAX networks. Parameters that indicate the Quality of Service such as delay, jitter, reliability and WIMAX throughput are analyzed over two scheduling services algorithms namely, UGS, RTPS compare with a novel scheduling service algorithm called ERTPS. The analysis includes check the compatibility for each scheduling service algorithm which include voice and video streaming and check out which scheduling services are better for voice and video interactive. OPNET network simulator is used to evaluate the performance of the three scheduling service algorithms.

Key words:

IEEE 802.16, WIMAX, scheduling, Quality of Service (QoS), and OPNET simulation.

المستخلص

قامت منظمة ال**IEEE** بوضع المعيار 802.16 الخاص بشبكات النطاق الواسع اللاسلكية (**WiMAX**) التي من طبيعتها دعم مختلف انواع البيانات(الصوت , الفيديو). كذلك تقدم شبكات وايماكس جودة الخدمة علي مستوي طبقة ربط البيانات. وقد حدد المعيار اربعة خوارزميات لجدولة الخدمة وهذه الاطروحة تقدم دراسة تحليلية لنقل الصوت والفيديو عبر شبكات الوايماكس ولضمان ذلك تم تحليل المعاملات التي تشير الي جودة الخدمة (**delay,jitter,reliability and throughput**) وتم ذلك عن طريق مقارنة كل من خوارزمية **UGS** و خوارزمية **rtPS** مع خوارزمية متطورة **ertPS** ويتضمن التحليل التحقق من التوافقية لكل خوارزمية جدولة والتحقق من ايهما افضل لنقل الصوت وايهما افضل لنقل الفيديو وقد تم ذلك باستخدام برنامج محاكي الشبكات **OPNET** لتقييم الاداء .

Acknowledgements

In the name of Allah, the Most Gracious and the Most Merciful Alhamdulillah. All praises to Allah for the strengths and His blessing in completing this thesis. Special appreciation goes to my supervisor, Dr. Hassab Elgawi Osman for supervising this thesis. Special thank extended to Dr. Omer Abdelrazig for his kind support and valuable comments. I must express my deep gratitude to my parents, uncles and aunts and love to all my family who have supported me and guided me to reached this stage.
