List of Figures. x
List of Tables . xii

Chapter 1: Introduction 1
1.1 Motivation. 2
1.2 Problem areas: 6
1.2.1 Problems with heterogeneous distributed database systems. 6
1.2.2 Difficulties of heterogeneous distributed database. 7
1.2.3 The research problem. 12
1.3 Aims and Issues. 14
1.4 Assumptions. 16
1.5 Hypothesis. 16
1.6 Limitations. 17
1.7 Thesis Outline. 18
1.8 Terms and Keywords. 18

Chapter 2: Literature Review 21
2.1. Background. 22
2.2. Distributed Database models: 23
2.2.1 The Current Distributed Database Models. 23
2.2.2 Distributed Database Models Under Development. 25
2.3. Problems with distributed database: 27
2.3.1. Replication: 27
2.3.1.1 Eager Replication. 29
2.3.1.2 Lazy Replication. 30
2.3.2 Allocation. 33
2.3.3 Distributed Query Processing: 35
2.3.3.1 Architecture of a Query Processor. 35
2.3.3.2 Query Optimization. 38
2.3.3.2.1 Plan Enumeration with Dynamic Programming. 39
2.3.3.2.2 Cost Estimation for Plans. 40
2.3.3.3 Query Execution Techniques: 41

2.3.3.3.1 Row Blocking. 42
2.3.3.3.2 Optimization of Multicasts. 43
2.3.3.3.3 Multithreaded Query Execution. 43
2.3.3.3.4 Joins with Horizontally Partitioned Data. 44
2.3.3.3.5 Semijoins. 44
2.3.3.3.6 Double-Pipelined Hash Joins. 46
2.3.3.3.7 Pointer-Based Joins and Distributed Object Assembly. 47
2.3.3.3.8 Top N and Bottom N Queries. 48
2.3.4 Concurrency control. 49
2.4 Related Issues: 53
2.4.1 Data Integration. 53
2.4.2 Administration of Distributed Database Systems. 56
2.4.3 Federated processing. 57
2.4.4 Information Integration and Enterprise Resource Planning (ERP). 60
2.5 Summary and Conclusions: 64
2.5.1 The Traditional Model. 64
2.5.2 Distributed Models Under Development. 65
2.5.3 Problems with distributed Database Models. 67
2.5.4 Integrated Systems. 68
2.5.5 Concluding Remark. 68
Chapter 3: The Proposed Approach for the Heterogeneou Distributed Database Systems Integration (AHDDI) 70
3.1 Introduction. 71
3.2 The AHDDI algorithm: 72
3.2.1 Divide-Conquer Algorithm. 73
3.3 Appling the divide-conquer rule of the distributed processing (Testing the approach). 75
3.4 AHDDI Architecture: 77
3.4.1 The Bottom Up Technique. 77
3.5 Design of the Distributed database: 81
3.5.1 The Architecture of AHDDI Distributed Database. 81
3.5.2 The Design Algorithm. 82
3.5.3 AHDDI Data Fragmentation: 83
3.5.3.1 Vertical Fragmentation. 83
3.5.3.2 Horizontal Fragmentation. 84
3.5.3.3 Hybrid Fragmentation. 85

3.5.4 The data Allocation. 86
3.5.5 The data Replication: 86
3.5.5.1 AHDDI Eager Replication. 88
3.5.5.2 AHDDI Lazy Replication. 89
3.5.5.3 Joins Replications Techniques in AHDDI. 89
3.5.5.4 The Feature of AHDDI Replication. 91
3.6 AHDDI Transaction and Query Processing: 92
3.6.1 Queries for detail processing. 94
3.6.1.1 The algorithms of QDP that work on local data. 96
3.6.1.1.1 The algorithm of the QDP that making the update within the transaction time. 96
3.6.1.1.2 The QDP that making updating after transaction. 98
3.6.1.2 The algorithms of QDP that work on remote data. 99
3.6.2 Queries for manipulation and data retrieving. 100
3.6.2.1 QMR in retrieving data. 100
3.6.2.2 QMR in administration the data. 103
3.7 AHDDI Communications and Transaction Management: 103
3.7.1 Application layer for local processing (ALL). 105
3.7.2 Application layer for global processing (ALG). 105
3.8 Further Issues: 108
3.8.1 Extendibility: 108
3.8.1.1 Adding new system or application to the existing distributed system. 108
3.8.1.2 Developing distributed AHDDI model from existing application. 110
3.8.2 AHDDI Enterprise and Information Integration. 111
3.8.3 AHDDI information networking. 113

Chapter 4: Implementation: 114
4.1 The Hierarchical Structure of the System. 115
4.2 The Bottom up Technique: 117
4.2.1 The Admission System (AS). 118
4.2.2 The Student Services and Information System (Student Affair System SAS). 120
4.2.3 The Timetable System (TS). 121
4.2.4 The Registration System (RS). 123
4.2.5 The Examination System (ES). 124

4.2.6 The Student Payroll System (SPS). 126
4.2.7 The Payroll System (PS). 126
4.2.8 The Academic Affair System (AAS). 127
4.3 Combining the subsystem: 127
4.3.1 Building the LANs systems. 127
4.3.2 Building the WAN. 130
4.4 Fragmentation: 132
4.4.1 Vertical fragmentation. 133
4.4.2 Horizontal fragmentation. 134
4.4.3 Hybrid fragmentation. 135
4.5 Data Allocation. 136
4.6 Data Replication: 137
4.6.1 Eager Replication. 137
4.6.2 Lazy Replication. 138
4.6.3 Joins Replications Techniques. 139
4.7 Query Processing 140
4.8 Software, DBMS, and Protocols used in the experiment. 143
4.9 Summary and Results. 143

Chapter 5: The Conclusions 145
5.1 Results and Contributions. 146
9.2 Limitations and Future Work. 151
