Chapter	Item	Page
	TITLE PAGE	I
	OPENING	II
	DEDICATION	III
	ACKNOWLEDGEMENT	VIII
	ABSTRACT	V
	ABSTRACT in ARABIC	VI
	TABLE OF CONTENT	VII
	LISTOFFIGURES	X
	LISTOFTABLES	XI
	LIST OF SYMBOLS	XII
	LIST OF APPENDICES	XIV
1	INTRODUCTION	
1.1	Introduction	1
1.2	Research objectives	2
1.3	Methodology	2
1.4	Research outlines	3
2	LITERATURE REVIEW	
2.1	Introduction	5
2.2	Classification of structures :	5
2.2.1	Externally indeterminate structures	7
2.2.2	Internally indeterminate structures	11
2.2.3	Externally & Internally indeterminate structures	13

Chapter	Item	Page
2.2.4	Difference between determinate & indeterminate structures	14
2.3	Loads :	15
2.3.1	Dead loads	15
2.3.2	Live loads	16
2.3.3	Impact loads	17
2.3.4	Wind loads	17
2.3.5	Snow loads	18
2.3.6	Earthquake loads	18
2.3.7	Hydrostatic & soil pressure loads	18
2.3.8	Thermal & other effects	19
2.4	Structures analysis :	19
2.4.1	Equations of equilibrium	20
2.4.2	Principle of superposition	20
2.5	Analysis methods :	21
2.5.1	Force method	21
2.5.2	Displacement method	23
2.5.3	Finite element method	25
2.6	Moment distribution :	27
2.6.1	Procedure for analysis	28
2.7	Design methods	28
2.8	Flat slabs design using various codes	31

Chapter	Item	Page
3	Calculations	
3.1	Introduction	53
3.2	Tools and equipment :	53
3.2.1	Excel	53
3.2.1	PROKON	55
3.3	Examples for flat slab design :	56
3.3.1	B.S 8110 1:1997	56
3.3.2	EC 2	71
3.3.3	ACI-318	77
3.4	Flow chart for flat slab design by B.S 8110 used in the program	94
3.5	Software development “ excel sheets “	99
4	RESULTS AND DISCUSSION	
4.1	Introduction	108
4.2	Excel results and prokon comparison	108
4.3	ACI-318, B.S8110 and EC 2 comparison	112
5	Conclusion and recommendations	
5.1	Conclusion	114
5.2	Recommendations	114
