

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

قال الله تعالى :

﴿ قُلْ لَوْ كَانَ الْبَحْرُ مِدَادًا لِكَلِمَاتِ رَبِّي  
لَنَفِدَ الْبَحْرُ قَبْلَ أَنْ تُنْفَذَ كَلِمَاتُ رَبِّي وَلَوْ جِئْنَا  
بِمِثْلِهِ مَدَدًا ﴾ (١٠٩)

سورة الكهف

صدق الله العظيم

# Dedication

*I would like to dedicate the benefits of this research to my parents who encourage me to follow the spiral of education, to my teachers whose efforts are illuminating the pages of this research and paving the way of knowledge for me and to all loyal friends.*

# ACKNOWLEDGETMENT

Grate full thank and grace to Allah for guiding and helping me finishing this research.

I would like also express sincere thanks and gratitude to my supervisors Dr. Carolein Edward for his keen supervision, guidance and valuable comment and support from the idea of this research until finishing Special thanks to the Statistic department.

## ABSTRACT

This study was carried out in Statistical Department at Soba university hospital since (2009-2011). The objectives of this study was to highlight the common cancer frequency at Soba hospital, study the incidence of cancers according to age and gender, and correlate the findings with age and gender. The study was based on 839 patients diagnosed by cancer, and were grouped according to sex, males (n=395), and females (n=444). There mean age, the male (59.09), and female (49.44).

The data collected from statistic archive, according to this result the common cancer type between all symbol was bladder cancer (11.1%), according to sex and site of cancer, among the male the gastro intestinal tract cancer (31.3%), and female the reproductive system cancer (28.2), and according to age the study find that, there is signification relationship between age and site of cancer and gender.

## ملخص الدراسة :

أجريت هزة الدراسة بمستشفى سوبا الجامعي , وتهدف ألي تسليط الضوء ألي أكثر أنواع السرطانات شيوعا بين المرضى المترددين ألي المستشفى والذين تم تشخيصهم بالإصابة بمرض السرطان في الفترة (2009م – 2011م) , وكذلك دراسة الحالات المصابة بالمرض وعلاقتها بالعمر والجنس.

استندت الدراسة علي 839 مريض تم تشخيص حالاتهم بالإصابة بالسرطان , جمعت وفقا للجنس , الذكور (ن=395) , والإناث (ن=444) , ووفقا ألي السن فان متوسط أعمار الذكور (59.09) , والإناث (49.81) وفقا لهذه الدراسة وجد أكثر أنواع السرطانات شيوعا بين الجنسين (ذكور وإناث) هو سرطان المثانة المثانة (11.1%) , أما من ناحية الجنس أكثر السرطانات شيوعا بين الذكور هو سرطان الجهاز الهضمي (31.3%) والإناث سرطان الرحم (28.2%) , أما من ناحية الأعمار لوحظ ان كلما زاد عمر الذكور كلما زاد احتمال أصابتهم بالسرطان, أما بين الإناث فليس هنالك علاقة بين العمر والإصابة بالسرطان

وخلصت الدراسة ألي أن الإناث أكثر إصابة بالسرطان من الذكور, وان هناك علاقة واضحة بين مكان السرطان وجنس المريض
