

الآية

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

قال تعالى:

يَرْفَعُ اللَّهُ الَّذِينَ آمَنُوا مِنْكُمْ وَالَّذِينَ أُوتُوا الْعِلْمَ دَرَجَاتٍ ۚ وَاللَّهُ بِمَا تَعْمَلُونَ خَبِيرٌ

صدق الله العظيم

سورة المجادلة الآية (11)

Dedication

To my parents for supporting me and guiding me till I reach this stage

To my lovely sister & brothers

To my best friends who encouraged me

To my teachers who have made it possible

To every person hope to see me successful

To the people whom I love and they believe in me

Acknowledgement

Firstly all thanks to **ALMIGHTY ALLAH** for blessing my life.

Greatest thanks to my supervisor professor YousifFadlallah for his support, guidance and encouragement all the time.

Special thanks to working staff of Zinam Specialist Hospital for their cooperation and kindness.

Thanks are extended to Us. Suhair Ramadan in Research Laboratory for technical assistance.

Thanks are extended toUs. Wafa Mohamed, Us. Mohamed Karrar, and my colleagues NamarigAlfatih and Mawadda Ahmed.

Finally, faithful thanks are sent to all staff members of Microbiology Department – Sudan University of Science and Technology.

Abstract

This study was done in Zinam Specialist Hospital in Kharoum City during the period of February to May 2015 to detect Anti-HCV among patients with diabetes type2.

90 Blood samples were collected, separate sera which stored at -20°C until IgG antibodies were detected by ELISA. The results revealed that 5/90 (5.5%) of diabetic patients showed anti-HCV antibodies within age group 45-55 years. Two of these positive patients were females and three were males. Statistically, there was no significant difference between the smoker (1.1%) and nonsmoker (4.4%) P value (0.453), also there was no statistical difference between these with family history of diabetes 4 (4.4%) and those with no history 1(1.1%) P value (0.258).

These results needs further study to validate them.

المستخلص

أجريت هذه الدراسة بمستشفى زينام التخصصي بولاية الخرطوم في الفترة بين شهر فبراير حتى شهر مايو 2015م للكشف عن وجود أجسام مضادة لفيروس التهاب الكبد (ج) عند المرضى المصابين بالسكري النوع الثاني.

جمعت عينات الدم وتم فصل مصل الدم وحفظه بدرجة حرارة -20 درجة مئوية حتى فحصت للكشف عن وجود الأجسام المضادة لالتهاب الكبد الفيروسي (ج) بواسطة تقنية الإليزا. وقد أظهرت النتائج ان 5 (5.5%) من مرضى السكري كانت لديهم اجسام مضادة لإلتهاب الكبد الفيروسي ج في الفئة العمرية بين 45-55 سنة, اثنان من المرضى من الاناث وثلاثة من الذكور.

إحصائيا, لم يكن هناك اي علاقه ذات دلالة احصائية بين المدخنين 1 (1.1%) وغير المدخنين 4 (4.4%) وايضا لم يكن هناك علاقه ذات دلالة احصائية بين من لديهم تاريخ مرض السكري الوراثي 4 (4.4%) المرضى والذين لم يكن لديهم تاريخ لمرض السكري الوراثي 1 (1.1%)
