

الآية

(وَقُلْ اَعْمَلُوا فَسَيَرَى اللَّهُ عَمَلَكُمْ وَرَسُولُهُ

وَالْمُؤْمِنُونَ ^ص وَسَتَرْدُونَ إِلَىٰ عَالِمِ الْغَيْبِ وَالشَّهَادَةِ

فَيَنْبِئُكُمْ بِمَا كُنْتُمْ تَعْمَلُونَ)

صدق الله العظيم

التوبة(105)

Dedication

This work is dedicated to my beloved parents, who have always loved me unconditionally and whose good examples have taught me to work hard for the things that I aspire to achieve. Also I dedicated to all the people in my life who touch my heart.

ACKNOWLEDGMENT

In the name of Allah, the Beneficent, the Merciful, first praise is to Allah, the Almighty, on whom ultimately we depend for sustenance and guidance. Second my sincere gratitude goes to my supervisor,

Ustaz. Abdalla Salih Ali, whose encouragement, guidance and support were really valuable during every stage of this research.

I also offer my regards to the School of Electrical and Nuclear Engineering, Sudan University of Science and Technology, its leadership and the staff for providing me with an academic base, which has enabled me to take up this study.

Finally, I would like to express the profound gratitude to my beloved family and friends who supported me in any respect during the completion of the research.

ABSTRACT

This research investigates the stabilization of the inverted pendulum system based on a full state- feedback controller via pole placement method where the closed loop poles to be placed at desired locations. The efficiency of the pole placement technique has been verified the MATLAB/SIMULINK software. Simulation results show good match between predicted and actual outputs.

المستخلص

هذا البحث لفحص استقراريه نظام البندول المعكوس اعتمادا على وحدة تحكم الحالة للتغذية الخلفية عبر طريقة احلال القطب حيث توضع اقطاب الحلقة المغلقة فى مواقعها المرغوبة .تم التحقق من كفاءة تقنية احلال الاقطاب باستخدام برنامج MATLAB/SIMULINK ، حيث اظهرت نتائج المحاكاة تطابق جيد بين المخرجات المتوقعة والفعلية.

Abstract	iv
المستخلص	v
Table of Contents	vi
List of Figures	ix
List of Tables	x
CHAPTER ONE: INTRODUCTION	
1.1 General Review	1
1.2 Problem Statement	1
1.3 Objectives	2
1.4 Methodology	2
1.5 Thesis Layout	2
CHAPTER TWO: CONTROL SYSTEM	
2.1 Previous Work	3
2.2 Introduction to Control System	6
2.2.1 Open loop and closed loop system	6
2.2.2 Classical and modern control system	8
2.3 Analysis and Design of Control System	9
2.3.1 Root-locus method	9
2.3.2 Frequency-response method	10
2.4 System Compensation	15
2.5 State Space Analysis and Design	20

2.5.1 Controllability and observability	20
2.5.2 Full-state feedback control design	23
CHAPTER THREE: CONTROLLER IMPLEMENTATION OF INVERTED PENDULUM SYSTEM	
3.1 Inverted Pendulum System	26
3.2 Inverted Pendulum Classification	27
3.2.1 Linear inverted pendulum	27
3.2.2 Circular inverted pendulum	27
3.2.3 Planar inverted pendulum	27
3.2.4 Configurable Inverted Pendulum	28
3.3 Inverted Pendulum Properties	28
3.4 Applications of Inverted Pendulum	29
3.5 Inverted Pendulum Control	30
3.6 The Implementation of Pole Placement	33
CHAPTER FOUR: SYSTEM SIMULATION AND RESULTS	
4.1 Simulation Modeling	38
4.2 System Identification	38
4.3 System Analysis	39
4.3.1 Open-loop step response of the system	39
4.3.2 Stability of the system	41
4.3.3 Controllability of the system	42
4.4 Designing Full-state Feedback Controller	43
4.4.1 Pole placement method	43
4.4.2 Simulation results	46
4.4.3 Discussion	48
CHAPTER FIVE: CONCLUSION AND RECOMMENDATIONS	
5.1 Conclusion	49

5.2 Recommendations	49
