

DEDICATION

To my parents who spare no efforts to enlighten our life

Acknowledgment :

Primary my praise and thanks should be to Allah, the almighty most gracious and most merciful, who granted me the serenity, means of strength and practice to accomplish this work.

I am deeply indebted to my supervisor Dr : Khalda Mirghani Hamza for her valuable help and guidance during this patience assistance and invaluable device.

My appreciation is extend to Dear sisters, friends, and other member of the department of haematology Sudan University of Science and Technology and Al-Gdarif hospital staff.

ABSTRACT

This is an analytical case –control study, conducted at Al-Gdarif teaching hospital, during the period from January to April 2011. The aim of this study was assessment of the hematological parameters (complete blood count), and serum ferritin, tests in visceral Leishmaniasis (v l) patients, attended Al-Gdarif teaching hospital. Fifty visceral Leishmaniasis patients were informed about the study and agreed for participation .The study population (both sex) was divided into three group according to age .

Five ml of venous blood was bleed ,from both patients and control , 2.5ml in EDTA(1.2mg/ml) containers and 2.5ml without anticoagulant (serum) ,to investigated the CBC ,peripheral blood film ,reticulocyte count, and serum-ferritin tests .Fully automated hematological analyzer sysmex was used for CBC, and manual analysis for blood film ,and reticulocyte count ,and a fully automated immunoassay system (AIA -600 11) was used for Serum-ferritin analysis. The staining films(Ral-stain), were examined to detect the peripheral blood morphology, and other staining films(vital stain) to count reticulocyte cell manually .

All visceral Leishmaniasis patients had mean value of HB(7.2g/dl) ,RBC(3.6×10^6), Hct(25.4%), MCV(69.5 fl), MCH(19.9 pg), MCHC(28.1g/dl), WBCs($3.2 \times 10^6 \mu\text{l}$), Neutrophil(33.2%) ,And platelet($142.2 \times 10^3 \mu\text{l}$), decrease, highly significant than control mean values(All p value=0.00).The mean of lymphocyte, and eosinophil,(50.8% ,11.2%,respectively), significant increase than control mean values (p value=0.00) due to infecation. The mean of the Serum-ferritin in test (33.2 ng/ml), showed significant decrease than control (52.7 ng/ml) ,but with normal rang .The reticulocyte count showed significant increase in test ,than control (mean=4.8%).

مستخلص الاطروحة

هذه دراسة تحليلية تعتمد على المقارنة بين الحالة والمعيار المفتض تم اجراءها في الفترة ما بين شهر يناير الى ابريل 2011 بمستشفى القصرين التعليمي لقياس خضاب الدم ومستوي مخزون الحديد.

اخذت 50 عينة من مرضى الليشمينيا الحشوية و 25 عينة من المعيار بعد اخطارهم بهذه الدراسة واهميتها واخذ موافتهم علي المشاركة. قسم مرضى الليشمينيا من الذكور والاناث الى ثلاثة مجموعات حسب الفئات العمرية.

تم أخذ 5 مل من الوريدي من المرضى والمعيار وقسمت الى 2.5 مل في حاويات تحتوي على مانع تجلط (EDTA 1.2 mg/ml) و 2.5 مل في حاويات لا تحتوي على مانع تجلط لتحضير المصل وذلك لتحليل الدم الكامل والشكل الظاهري للخلايا والخلايا الشبكية ونسبة مخزون الحديد المصلبي.

استخدم جهاز (sysmecs) الفوري لتحليل الدم الكامل اتوماتيكيا ويدوي تم معرفة الشكل الظاهري لخلايا الدم من الشرائح المصبوغة بصبغة (Rai) وحساب عدد الخلايا الشبكية من الشرائح المصبوغة بصبغة الخلايا الحية.

اظهرت الدراسة ان قيمة متوسط خضاب الدم (7.2 dl/g) متوسط تعداد كريات الدم الحمراء (3.6×10^6 dl) ، متوسط تكثس الخلايا (25.4%) ، متوسط حجم الخلية (19.9 pg) ، متوسط خضاب الدم في الخلية (69.5 fl) ، متوسط تركيز خضاب الدم الخلية (28.1 dl/g) ، متوسط الخلايا المحببة (33.2%) ، متوسط الصفائح الدموية (142.2×10^3 dl) ولكل مرضى الليشمينيا الحشوية ادنى مقارنة مع قيم متوسط المعيار بفرق ذو دلالة احصائية واضحة (Pvalue 0.00) ويعزى ذلك لان جميع المرضى مصابو بالانيميا.

وان قيم متوسط الخلايا اللمفية (50.8%) والخلايا المحببة القاعدية = (11.2%) أعلى مقارنة مع المعيار ذو دلالة احصائية (Pvalue 0.00) وذلك الى الاصابة بطفيل الليشمينا .

وان قيم متوسط مخزون الحديد = (33.2 ng/ml) ادنى مقارنة مع المعيار بفرق ذو دلالة احصائية (Pvalue 0.00) ولكنه ضمن المدى الطبيعي .

LIST OF ABBREVIATION

HB	Hemoglobin
RBCs	Red blood cells
Hct	Haematocrit
MCV	Mean cell volum
MCH	Mean cell hemoglobin
MCHC	Mean cell hemoglobin concentration
HIV	Human immune iruvs
WBCs	Whit blood cells
IgG	Immunoglobulin G
EDTA	Ethyline diamine tetra acetic acid
CMI	Cell-mediated immunity
CL	Coutaneous leishmaniasis
Mcl	mucocutaneous leishmaniasis
VL	Visceral leishmaniasis
IBC	Iron binding capacity
CBC	Complete blood count
CMI	Cell mediated immunity
