

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

قال الله تعالى

وَأَنْزَلَ اللَّهُ عَلَيْكَ الْكِتَابَ وَالْحِكْمَةَ وَعَلَمَكَ مَا
لَمْ تَكُنْ تَعْلَمُ وَكَانَ فَضْلُ اللَّهِ عَلَيْكَ عَظِيمًا

صدق الله العظيم

سورة النساء الآية (113)

Dedication

To my parents who supported me through my lives.

To my family and to my best friends.

To my teachers and supervisor who gave us the chance to prove my selves and opened my ways to the future careers.

To the coming generation that we hope will benefit my work.

To all the above mentioned we dedicate this research.

Acknowledgments

Praise and thanks to Allah, the almighty, who gave me health, knowledge, power and patience to carry out this work.

Special thanks to my supervisor **Dr.Sana Al.Taher.**

Greatest thanks are extended to my teachers of hematology department of sudan university of science and technology.

Finally thanks to all nice people who helped me to achieve this research.

Abstract

Malaria is major causes of morbidity and mortality in the tropical countries, effect in hematological variables as outcome. The aim of study to measure of complete blood count which included RBCs count, Hb, HCT, MCV, MCH, MCHC , WBCs count and differential, platelet count and platelet indices included PDW and MPV , also measure of reticulocyte count among patients with malaria.

This is a cross -sectional descriptive study done in Khartoum state. Fifty blood samples were collected from individual with malaria and twenty five blood samples collected from healthy individual as control drained into the sterile EDTA containers using automated hematology analyzer (sysmex KX-2IN).

The study explain that mean value of RBCs in patients with malaria was $(4.1 \times 1012/L \pm 0.8)$,mean value of hemoglobin ($11.5 \times g/dl \pm 2.6$),mean value of HCT($36.9\% \pm 7.6$) , mean value of MCV, MCH and MCHC($88.7 fl \pm 7.5$, $27.7 pg \pm 3.4$ and $31.1 \% \pm 2.0$) respectively, mean value of reticulocyte count ($1.48 \% \pm 0.55$), also explain mean value of WBCs ($6.69 \times 10^9 /L \pm 3.9$)and differential (neutrophil $4.0 \times 10^9 /L \pm 2.7$,lymphocyte $2.1 \times 10^9 /L \pm 1.9$, monocyte $0.5 \times 10^9 /L \pm 0.32$ and eosinophil $0.15 \times 10^9 /L \pm 0.08$). And explain mean value of platelet count ($137 \times 10^9 /L \pm 97$) and platelet indices (PDW 14.1 ± 3.6 , MPV 10.1 ± 1.4) . The study explain the main type of anemia in patients with malaria was normocytic normochromic anemia.

The study done in male (68%) than female(32%) and most of them in age group 26 to 39 years.

The study reveled that , there was no change in (MCV, MCH , MCHC , reticulocyte count ,WBCs and differential , but they were decreased significantly in (RBCs, Hb, HCT and PLT count) and increased significantly in platelet indices (MPV and PDW).

ملخص الدراسة

هذه دراسه مقطعيه وصفية اجريت فى ولايه الخرطوم لقياس تعداد الدم الكلى و (MCV, MCH , MCHC) كريات الدم الحمراء ومؤشراتها, HCT, يشمل الهيموغلوبين Neutrophil, Lymphocyte و كريات الدم البيضاء والتفضليه Monocyte , eosinophil و تعداد الصفائح الدمويه كذلك شملت قياس تعداد الشبكيات () فى المرض الذين يعانون من الملاريا (PDW,MPV) ومؤشرات الصفائح الدمويه .

بعد التاكد من الاصابه بالملاريا عن طريق عمل مسحه الدم والاي سيتى تم تجميع وايضا تجميع خمسه EDTA خمسون عينه فى وعاء مانع للتجلط يحتوى على ماده وعشرون عينه من اشخاص اصحاء . وقد بينت الدراسه ان متوسط قيم الهيموغلوبين 6 (HCT) و (كريات الدم الحمراء $10^{12} \times 4.1$) $11.5, 6 \pm 0.8$ g/dl (5.36.9% ± 7.6) (MCV, MCH and MCHC) مؤشرات كريات الدم الحمراء (5.36.9% ± 7.6) (88.7 fl ± 7 ,

على التوالى , تعداد الشبكيات (27.7 pg ± 3.4 and 31.1 % ± 2.5 ± 1.48) $10^9 \times 6.69$ (كريات الدم البيضاء (Neutrophil 4.0 $\times 10^9 /L \pm 2.7$, Lymphocyte

$2.1 \times 10^9 /L \pm 1.9$, Monocyte $0.5 \times 10^9 /L \pm 0.32$, Eosinophil $0.15 \times 10^9 /L \pm 0.08$)

PDW(مؤشرات الصفائح الدمويه ($137 \times 10^9 /L$) والصفائح الدمويه ($10^9 \times 97 \pm 14.1 \pm 3.6$) , MPV

وبينت الدراسه ان اكثر انواع الانيميا بين المرضى الذين يعانون من (normocytic normochromic anemia) .

أجريت هذه الدراسه فى 68% من الذكور و 32% من الإناث وكان معظمهم فى الفئة العمرية من 39-26 سنه.

وخلصت الدراسه بانه لا توجد تغيرات فى مؤشرات كريات الدم الحمراء , تعداد الشبكيات , كريات الدم البيضاء والتفضليه . وايضا وجدت انخفاض ملحوظ فى تعداد و تعداد الصفائح الدمويه وزباده ملحوظه فى HCT , كريات الدم الحمراء, الهيموغلوبين (PDW, MPV) مؤشرات الصفائح الدمويه .

List of Tables

Table	Title	Page
(2.1)	Normal range of platelet Indices (PDW and MPV)	37
(3.1)	The mean value of RBCs count , hemoglobin , hematocrit , red cells indices and reticulocyte count of patients with malaria parasite and control	41
(3.2)	The mean value of WBCs count and differential (Neutrophil, Lymphocyte, Monocyte , Eosinophil)of patients with malaria parasite and control	42
(3.3)	The mean value of PLT count and platelet indices (PDW and MPV) of patients with malaria parasite and control	43

List of Figures

Figure s	Title	Page
(1.1)	Diagrammatic representation of the bone marrow pluripotent stem cell and the cell lines that arise from it	3
(3.1)	Show RBCs morphology in patients with malaria	45
(3.2)	Show neutrophilia in patients with malaria	46
(3.3)	Show lymphopenia in patients with malaria	47
(3.4)	Show monocytosis in patients with malaria	48
(3.5)	Show the age group 26 to 39 more effected with malaria parasite than lowest than 25 and highest than 40	49
