

الآية

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

قال تعالى :

(قُلْ إِنَّ صَلَاتِي وَنُسُكِي وَمَحْيَايَ وَمَمَاتِي
لِلَّهِ رَبِّ الْعَالَمِينَ {162} لَا شَرِيكَ لَهُ وَبِذَلِكَ
أُمِرْتُ وَأَنَا أَوَّلُ الْمُسْلِمِينَ {163}).

صدق الله العظيم

سورة الأنعام الآية 162-163

DEDICATION

TO ... my mother and father

My life soul

Acknowledgment

First of all I gratefully thank Allah for helping me in the preparation of this work .

My thanks also go to the supervisor of this work : Dr. Sana Eltahir, Associated professor, University of El-Neelain, Faculty of Medicine for the guidance and encouragement afforded me in the preparation of this work .

My gratitude and deepest thanks are also extended to: Dr. Huda Haroon, manager of pediatric hospital in Madani for her guidance and support. My thanks continuous to my colleagues in laboratory section in pediatric hospital and Renal Dialysis center in Madani.

I would like to thank all families and individuals who donated samples for this study.

finally I would like to thanks all my colleagues for their encouragement and support.

To these and to all others who have helped in one way or another, I express my gratitude.

Abstract

This was a descriptive analytical study conducted in Aljazeera State during November 2008 to January 2009, carried out in patients suffering from β thalassemia and their relatives in Wad madani pediatric teaching Hospital, to estimate the frequency of β thalassemia in patients and their relatives .

70 persons (30 males and 40 females), their ages ranged between 2 to 80 years were enrolled .

Five mL of venous blood was collected from each person, 2.5 mL into EDTA containers, for blood films, full blood count (CBC) using electronic method (Sysmex Kx 21n, fully automated hematological analyzer), and hemoglobin F quantification (Betke *et al.* method), were performed on all subjects, and 2.5 mL in plain containers for serum ferritin , and serum iron using (A25 automated system), were performed only on microcytic hypochromic samples.

A reduced mean corpuscular volume (MCV) of <80 fl with reduced mean corpuscular hemoglobin (MCH) of <27 , and elevated HbF (mean 4.6) used as a screening test for thalassaemia in this population, followed by iron studies to the microcytic hypochromic samples (mean of iron 76.08 and ferritin 134.86), to confirm the diagnosis. Using this approach, 43 cases (61.4%) were diagnosed of β -thalassaemia trait, while 22 (31.5%) were normal and 5 cases (7.1%) were already diagnosed as β -thalassaemia patients.

أجريت هذه الدراسة التحليلية الوصفية في ولاية الجزيرة في الفترة ما بين نوفمبر 2008 وحتى يناير 2009 وشملت المصابين بمرض فقر دم حوض البحر الأبيض المتوسط النمط بيتا وأقربائهم بمستشفى ود مدنى للأطفال .

كان الهدف من هذه الدراسة هو تحديد تردد المصابين بهذا المرض والحاملين للصفة الوراثية لهذا المرض.

شملت الدراسة 70 شخص و تتراوح أعمارهم ما بين 2- 80 سنة منهم 30 ذكور و 40 إناث حيث تم أخذ 5مل من عينه الدم الوريدي من كل شخص , وضعت 2,5مل من العينة في حاوية بها مانع للتجلط وذلك لإجراء فحص الدم الكامل و عمل مسحات الدم الرفيعة أما بقية العينة وضعت فى حاوية خالية من مانع التجلط وذلك لفصل المصل لإجراء اختبار تركيز الحديد في الدم .

تم اختبار الدم الكامل بواسطة جهاز تعداد الدم الالكتروني (Sysmex) . وتحديد نسبة الخضاب الجنيني , وتركيز الحديد عند الأشخاص الذين لديهم فقر دم صغير الكريات ناقص الصباغ فى كل عينه . من هذه النتائج تم تحديد أن كل شخص حجم الكريات الوسطى لديه أقل من 80fL (صغير الكريات) , وخضاب الكرية الوسطى لديه أقل من 27 pg (ناقص الصباغ), وكان تركيز الخضاب الجنيني له أكثر من 1,0% , وتركيز حديد المصل طبيعي , يكون مصاب بخلة فقر دم البحر الأبيض المتوسط ومن ثم كان عدد المصابين بالخلة 43 بنسبة 61,4% , والأصحاء 22 بنسبة 31,5% , أما المرضى كان عددهم 5 بنسبة 7,1% وهؤلاء مشخصين مسبقا .

LIST OF ABBREVIATIONS

A	Adenine
C	Cytosine
CBC	Complete blood count
CO ₂	Carbon dioxide
COOH	Carboxylic-group
dL	Deciliter
DNA	Deoxyribonucleic acid
EDTA	Ethylenediamine tetra acetic acid
ELISA	Enzyme linked immunosorbant assay
FBC	Full blood count (complete blood count, CBC)
Fe	Iron
fL	Femtolitre
G	Guanine
Hb	Hemoglobin
HbA	Hemoglobin A
HbA ₂	Haemoglobin A ₂
HbE	Hemoglobin E
HbF	Fetal hemoglobin
HbH	Hemoglobin H
HCT	Hematocrit
HiCN	Hemoglobin cyanide
HPHF	Hereditary persistence of fetal hemoglobin
HPLC	High performance liquid chromatography
K ₂ EDTA	Dipotassium ethylenediamine tetraacetic acid
kb	kilo base pairs
kDa	Kilo Dalton
MCH	Mean corpuscular Hemoglobin

MCHC	Mean corpuscular Hemoglobin concentration
MCV	Mean corpuscular volume
MPV	Mean platelet volume
mRNA	Messenger ribonucleic acid
NH ₂	Amino-group
nt	Nucleotide
PCR	Polymerase chain reaction
PCV	Packed cell volume
PDW	Platelet distribution width
pg	Pico gram
RBCs	Red blood cells
RDW	Red cell distribution width
RFLT	Restriction fragment length polymorphism
SD	Stander deviation
SPSS	Statistical product and service solution
T	Thymine
WBCs	White blood cells
µg	Microgram
