Dedication	I
Abstract	II
الخلاصة	III
Acknowledgements	IV
List of Abbreviations	V
1 Introduction	
History of the Center (RICK)	2
Types of examination at Nuclear Medicine Departments	3
Objectives of study	3
Hypothesis	4
Methodology	4
Types of data collection	
Source of data collection	4
Duration of study	4
Technique of data collection	4
The scope of thesis.....	4
2 Literature Review	
Anatomy of lungs	5
Apex	5
Base	5
The Coastal surface	5
The Medical surface	5
Pulmonary borders	6
Pulmonary fissures and lobes	6
Pulmonary hila and roots	7
Physiology	8
Ventilation	10
Perfusion	10
Ventilation-perfusion ratios (V/Q)	10
Pulmonary Embolism	11
Small/Medium Pulmonary Embolism	12
Massive Pulmonary Embolism	12
Multiple recurrent Pulmonary Embolism	12
Investigations	12
Chest X-rays	13
Computed tomography (CT)	13
Magnetic Resonance Pulmonary Angiography (MRI)	13
Pulmonary Angiography	13
Electrocardiogram (ECG)	14
Radionuclide imaging	14

Perfusion Scintigraphy	14
Ventilation/Perfusion scintigraphy	14
Examples of disordered Lung function	15
Radiation protection	15
Instrumentation	16
Gamma Camera	16
Detectors	16
Photomultiplier tubes	17
Collimators	17
Molybdenum/Technetium generators	18
3 Patients and methods	
Introduction.....	19
Patient.....	19
Perfusion study	19
Mechanism of uptake	19
Preparation	20
Imaging method	21
Method of injection	21
Positioning	21
Image Interpretation	21
Criteria for diagnosis of pulmonary emboli (PE)	22
4 Results and data presentation	23
Diagram of table (4-1).....	24
Diagram of table (4-2).....	25
Annual patients number in Gamma Camera	26
Percentage of patients in Gamma Camera	26
Diagram of table (4-3) and table (4-3)	27
5 Discussion, Conclusion and Recommendations	
Discussion	28
Conclusion	29
Recommendations	29
References	30
