Abstract	iii
مختص البحت	iv

Chapter one:

Introduction

(1.1) History of statistical physics	1
(1.2) The relation between statistical physics, fluid mechanics and quantum mechanics	1
(1.3) Aim of the work	1
(1.4) Presentation of the thesis	2

Chapter two:

Fluids mechanics

(2.1) Introduction	3
(2.2) Euler's equation	3
(2.3) Energy equation	5

Chapter three:

Quantum mechanics

(3.1) Introduction	7
--------------------	---

(3.2)	Duality of wave particle	7
(3.3)	Representation of a particle by wave-packet	8
(3.4)	Representation of the free particle by plane wave	10
(3.5)	Schrödinger's equation time dependent form	12
(3.6)	The time independent Schrödinger's equation	13
(3.7)	Basic Dirac notation	16
(3.8)	Matrix representation	18
(3.9)	Mixed states and the density operator	19
(3.10)	Equation of motion for density operator	22

Chapter four:

Statistical mechanics

(4.1)	Introduction	24
(4.2)	Statistical distribution laws	24
(4.3)	Maxwell-Boltzmann distribution	26
(4.4)	Quantum statistics	29
(4.5)	Ensembles	31
(4.6)	Canonical distribution function	33
(4.7)	Grand canonical distribution function	34
(4.8)	Canonical distribution	36
(4.9)	Grand canonical distribution	39
(4.10)	Derivation of statistical distribution laws by using grand canonical distribution	41

Chapter five:

Contribution

(5.1)	Introduction	45
(5.2)	Derivation of the statistical distribution by using Euler's equation	45
(5.3)	Derivation of the probability density by using Schrödinger's equation	47
(5.4)	Conclusion and Recommendations	51
	References	52
